CP390i - GPS Chart Plotters
Owner's Manual
WARNING!!!

Electronic charts displayed by the GPS Chart Plotter are believed to be accurate and reliable, but are not intended to be a substitute for the official charts, which should remain your main reference for all matters related to the execution of safe navigation.
For this reason you should always keep the official published and approved nautical charts on board.

FCC Compliance Statement

This device complies with Part 15 of the FCC limits for Class A digital devices. This equipment generates, uses and can radiate radio frequency energy and, if not installed or used in accordance with the instructions may cause harmful interference with radio communications.
There is no guarantee that interference will not occur in a particular instance. If this equipment does cause harmful interference to other equipment, try to correct the problem by relocating the equipment.

Consult an authorized STANDARD HORIZON dealer or other qualified service technician if the problem cannot be corrected. Operation is subject to the following conditions: (1) This device cannot cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.
CLEANING PROCEDURE FOR THE GPS CHART PLOTTER SCREEN

Cleaning of the chart plotter screen is a very important operation and must be done carefully. Since the surface is covered by an antireflective coating, the procedure for cleaning all the surfaces can be performed using the following procedure: Use a clean, soft, lint-free cloth to clean the glass. We recommend using a micro-fiber cloth. Spray a small amount of ammonia-free cleaner (isopropyl alcohol) onto the cloth. Spraying on the cloth will prevent overspray. Fold the cloth or lens cloth into a triangular shape, moisten the tip and use the index finger behind a corner to move the cloth across the surface in overlapping side to side strokes. If the cloth is too wet, a noticeable wet film will be left in its path and you will need to repeat the process. If too dry, the cloth won’t glide easily, and may damage the surface.

CAUTION

- The GPS Chart Plotter is designed for maritime use. To avoid water intrusion, ensure the C-MAP BY JEPPESEN C-CARD door is completely closed.
- Extensive exposure to heat may result in damage to the GPS Chart Plotter.
- The GPS Chart Plotter contains dangerous high-voltage circuits which only experienced technicians can handle.
- STANDARD HORIZON will not be liable for errors contained herein, or for incidental or consequential damages in connection with the performance or use of this material.
- Because we frequently update our software and applications, the pictures shown through this Owner’s Manual may be slightly different from what you see.

1. INTRODUCTION

Congratulations on your purchase of the STANDARD HORIZON GPS Chart Plotter. Whether this is your first STANDARD HORIZON product or not, we are committed to ensuring your enjoyment and satisfaction with this unit. Our Technical support personnel stand behind every product we sell. Customers should contact STANDARD HORIZON on 714-827-7600 or email to marinetech@yaesu.com.

1.0 GENERAL INFORMATION

The CP390i (with internal GPS antenna) is a precision-crafted high-performance receiver for the Global Positioning System (WAAS GPS) constellation of satellites that provide precise location data with a host of navigation features and is ideal for nautical use and sealed against water ingress. The CP390i is housed in rugged, impact-resistant cases with outstanding ergonomic design for effortless operation. The CP390i is IP56 water resistant.

The advanced features of the GPS Chart Plotter include:
- 2Nm C-MAP World Wide Background chart included
- 7” 800x480 high resolution sunlight-readable display
- Internal 50 channels WAAS GPS antenna
- Video Input with “picture-in-picture” display
- Optional external 50 channel WAAS GPS antenna with 15m (50ft) of cable
- Fish Finder capable when connected to optional FF525 50/200kHz (Black Box Fish Finder)
- AIS capable (Color AIS Targets, AIS List Enhanced page, AIS-SART, AIS-MOB and AIS-EPIRB handling) when connected to an optional AIS device
- C-MAP Weather Service predictions
- Dual Chart page with independent zoom levels
- Selectable Sail boat and Power boat Ship Icons with Compass Rose indication
- Route Check
- Grounding Alarm
- SOG Speed Filter function to resolve erratic speed readings in rough seas
- Displays DSC Distress and Position Report calls received from a DSC VHF radio
- Dedicated MARK, ROUTE and FIND keys
- Supplied swivel mounting bracket and flush mounting hardware
- NMEA-0183 connections: 4 Inputs, 5 Outputs
- 3000 Marks / 50 Routes / 10000 Track Points
- 3 years waterproof warranty

1.1 PACKING LIST

When the package containing the Navigation device is first opened, please check for the following contents. If any parts are missing contact the dealer this Navigation device was purchased from. Accessories and replacements parts may be ordered in the USA by contacting STANDARD HORIZON’s Parts department on 714-827-7600 Extn. 6800 or by email at marineparts@yaesu.com.

<td>4kW 48 Mile 5ft Open Array</td>
</tr>
</tbody>
</table>

**NOTE**

For additional information, refer to the Radar Installation and Radar Operation Manuals located at www.standardhorizon.com.
2. INSTALLATION

NOTE
Throughout this Owner’s Manual same conventions are used. See the legend below:

[MENU] If you see brackets around a bold and capital letter word this refers to a key press.

[CHART] If you see brackets around a bold and small capital letter word this refers to a Soft Key press.

GENERAL SETUP When a word(s) is bold capital letters and underlined, this refers to a menu selection item.

A GPS Receiver with antenna is located inside the CP390i, which is designed to be bracket mounted. It may be flush mounted, however an optional external GPS antenna may be needed to receive GPS satellite signals.

To use the external GPS antenna, the internal GPS antenna must be turned off, using the procedure below:

1. Turn the CP390i On and select the GPS STATUS page.
2. Press [ENT] to show the GPS SETUP menu.
3. Move the ShuttlePoint knob to highlight INTERNAL GPS and press [ENT].
4. Move the ShuttlePoint knob to highlight OFF and press [ENT].
5. Press [CLR] to exit the GPS SETUP menu.
6. Confirm the GPS Status page is showing satellite signal strength bars and receive a fix.

2.0 MOUNTING THE GPS CHART PLOTTER

The CP390i is supplied with a swivel mounting bracket which allows them to be dash mounted. When flush mounting, the optional GPS antenna may be needed to receive GPS satellite signals. Refer to the images below for Bracket and Flush mounting.

NOTE
The CP390i is designed to be bracket and flush mounted. However when bracket mounting the CP390i in an area where satellite reception is not possible with the internal antenna or when flush mounted, the optional GPS antenna must be installed.

2.1 BRACKET MOUNTING

Before installing ensure the area the bracket is mounted to is strong enough to support the weight of the GPS Chart Plotter especially while under way. After the location is found, attach the mounting base to the area using the supplied hardware.
2.2 FLUSH MOUNTING

The CP390i is supplied with a flush mount template for the cutout hole and screw holes required to install the GPS Chart Plotter.

**NOTE**

Before drilling holes make sure there is enough room to mount the GPS Chart Plotter and there are no obstructions.
1. After a location is found, peel the template label from the backing and apply the label to the mounting area.

2. Drill a hole in one area of the cutout area that will allow the blade of a jig saw to be inserted. Insert and cut out the area on the panel using the jig saw.

3. Next drill the four holes required to insert the GPS Chart Plotter with the mounting studs.

4. Install the mounting studs on the GPS Chart Plotter and insert into the mounting hole.

5. Attach the GPS Chart Plotter to the mounting location by attaching the supplied hardware to the mounting studs.

![Figure 2.2.0 - Mounting Screws](image)

### 2.3 MOUNTING THE OPTIONAL EXTERNAL GPS ANTENNA

An external WAAS GPS antenna is available when the CP390i is flush mounted or mounted in an area where satellite reception is not possible with the internal antenna. This antenna is designed to be mounted on a base, installed on an extension or flush mounted. Choose a location for the antenna that has a clear view of the sky and is not located within 3ft of a Radar or other transmitting antennas. Ensure there are no major obstructions or fixtures in the immediate proximity to the antenna. The antenna relies on direct “line of sight” satellite reception. If you are unsure of the chosen location, temporarily mount the antenna in the desired location to verify correct operation. If mounted close to Radar, after the GPS Chart Plotter has a fix, turn on the Radar to ensure the GPS Chart Plotter holds the fix (use the GPS Status page, see Par. 12.5 “GPS Status page”).

The thread used on the antenna is an industry standard (1inch 14TPI) used on a wide range of mounting brackets.

**NOTE**
The antenna cable can be cut and spliced to ease installation. Care must be taken when reconnecting the antenna cable to protect from water and corrosion.

### 2.3.0 Flush Mounting the Antenna

**NOTE**
Before drilling holes, it is recommended the antenna be positioned where the location is planned, cable connected to the GPS Chart Plotter and power turned on to ensure a GPS fix is received.

1. Remove the threaded base from the antenna dome.
2. To ease installation a flush mount template for the antenna has been included.
3. Apply the mounting template sticker to the area that was verified for GPS reception.
4. Then, drill out the 0.78" (20mm) and 0.13" (3.2mm) holes, and remove the template.
5. Insert the cable into the 0.78" (20mm) hole and route to the GPS Chart Plotter.
6. Apply a small amount or RTV to the underside of the antenna.
7. Place the antenna and then screw it into place using the screws.

**NOTE**
In some cases the screw may not be long enough. If this happens simply apply more RTV to the underside of the antenna to glue it into place.

**2.4 CONNECTIONS**

The CP390i has connectors that allow them to be connected to a power supply, optional WAAS GPS antenna, optional FF525 50/200kHz Black Box Fish Finder and NMEA devices* such as Optional Video Camera, VHF’s, AIS Receiver, Digital Instruments and Autopilots.

**NOTE**
RS232 not opto-isolated electrical interface

**NOTE**
The GPS Chart Plotter can send many sentences to external NMEA devices*. The NMEA Output wires are yellow and white. If you have connected devices as shown in the table on the next page and need to feed NMEA to other devices (Autopilot, Radar…) you can parallel wires from the yellow, brown or white wires to other devices.

**NOTE**

RS232 not opto-isolated electrical interface

2.4.1 CP390i Connections

#### 2.4.1.0 DC Power Connection

[Diagram of CP390i connections]
2.4.1.1 Connection a Video Camera, FF525, AIS Receiver, VHF and Autopilot

NOTE

Port2 Input and Output is used by the optional FF525. In the diagram above you will notice Port2 Input and Output wires are shown in gray and not used.

Port4, and Port5 Outputs are can be connected to NMEA devices* capable of listening to NMEA-0183 sentences.

Port4, and Port5 Inputs can be connected to NMEA devices* capable of outputting to NMEA-0183 sentences.

The Input and Output baud rate for each Port is set using the Advanced Setup>In/Out Connections menu. For example if Port1 is set for AIS 38400, the Input Port operates at 38400 baud and the Output Port is disabled.

NOTE*

RS232 not opto-isolated electrical interface.
2.4.1.2 AIS Setup
The CP390i has to be set up to be able to receive NMEA information from the AIS receiver. The GPS Chart Plotter reads the AIS NMEA message VMD, type 1, 2, 3 and 5 for AIS Class A and type 18, 19, 24 for AIS Class B. Select the used port and transmission speed by following the procedure:

1. Press [MENU], move the ShuttlePoint knob to highlight SETUP MENU and press [ENT].
2. Move the ShuttlePoint knob to highlight ADVANCED SETUP and press [ENT] or move the ShuttlePoint knob to the right.
3. Move the ShuttlePoint knob to highlight IN/OUT CONNECTIONS and press [ENT] or move the ShuttlePoint knob to the right.
4. Move the ShuttlePoint knob to highlight PORT4 INPUT (or other Port the AIS is connected to) and press [ENT] or move the ShuttlePoint knob to the right.
5. Move the ShuttlePoint knob up/down to select AIS 38400 and press [ENT] or move the ShuttlePoint knob to the right.

2.5 BATTERY CONNECTIONS

1. The GPS Chart Plotters are supplied with a fuse and holder. This fuse should be installed into the Black wire to protect the NMEA Output/Input circuits from possible damaged.
2. Connect the Red and Black wires from the GPS Chart Plotter to a 12VDC source as directly as possible.

2.6 NMEA CONNECTIONS

The GPS Chart Plotter can be connected to external devices with NMEA and display information, examples:

- DSC VHF Radio
- Depth Sounder, Speed Log, Wind Instrument, Autopilot etc.
- Radar (USA ONLY)
- Personal Computer
- AIS Receiver
- MOBILARM System

2.7 GPS POSITION ON A VHF RADIO

STANDARD HORIZON has pioneered Digital Selective Calling (DSC) on VHF Radios. Advancements in DSC have made it possible to show the coordinates of a vessel that has transmitted a DSC Distress Call or even polled the location of another vessel and show the position of that vessel on the display of STANDARD HORIZON VHFs. STANDARD HORIZON has taken this feature one step further. If a CP390i is connected to a DSC capable VHF, the vessel in Distress or the polled position of the vessel is shown on the display of the GPS Chart Plotter, making it easy to navigate to the location of the vessel. This is a great feature that could save someone’s life or for anyone wanting to know the position of another vessel.
Other DSC VHF Manufactures

<table>
<thead>
<tr>
<th>GPS Chart Plotter</th>

</tr>
<tr>
<td>Blue</td>
<td>NMEA Positive Input</td>
<td>*Connect to NMEA Output (if available)</td>
</tr>
</tbody>
</table>

* Some manufacturers of DSC VHF’s are not capable of outputting NMEA DSC and DSE sentences to the CP390i. Refer to the Owner’s Manual and confirm the VHF can output NMEA DSC and DSE sentences.

**NOTE**

Refer to VHF Digital Selective Calling Section for operation.

2.8 OPTIONAL BLACK BOX FISH FINDER

STANDARD HORIZON offers an optional Black Box Fish Finder called the FF525. Please refer to the Owner’s Manual supplied with the Fish Finder for connections and operation.

![Figure 2.8 - FF525 50/200kHz Black Box Fish Finder](image)

**NOTE**

The FF520 is also compatible.

2.9 RADAR ANTENNA (USA ONLY)

Please refer to Par. 1.3 "Optional Dome or Open Array Radar Antennas". The Radar antenna includes the necessary electronics to deliver Radar information to a compatible STANDARD HORIZON GPS Chart Plotter, and is supplied with mounting hardware kit, interconnection cable and a Radar Junction Box.

2.10 PERSONAL COMPUTER CONNECTIONS

The GPS Chart Plotter can be connected to output Marks and Routes to many available PC programs. To send or receive User Points the PC Program must be able to receive NMEA WPL and RTE sentences. Refer to the table below for connection to a Serial DB9 connector.

<table>
<thead>
<tr>
<th>Pin</th>
<th>PC DB9 connection</th>
<th>Port1 connection</th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td>Receive</td>
<td>Brown</td>
</tr>
<tr>
<td>3</td>
<td>Transmit</td>
<td>Blue</td>
</tr>
<tr>
<td>5</td>
<td>Signal ground</td>
<td>Green</td>
</tr>
</tbody>
</table>

By default Port1 is set to receive or send User Points to and from a PC. The GPS Chart Plotter may be set up to send and receive the User Points on a different Port using the following procedure:
1. Press [MENU], move the ShuttlePoint knob to highlight **SETUP MENU** and press [ENT].
2. Move the ShuttlePoint knob to highlight **ADVANCED SETUP** and press [ENT] or move the ShuttlePoint knob to the right.
3. Move the ShuttlePoint knob to highlight **IN/OUT CONNECTIONS** and press [ENT] or move the ShuttlePoint knob to the right.
4. Move the ShuttlePoint knob to highlight **SEND/REC RTE & MARKS** and press [ENT] or move the ShuttlePoint knob to the right to show the popup window.
5. Move the ShuttlePoint knob to desired Port and press [ENT].

The PC COM settings are:
- Baud Rate: 4800
- Parity: None
- Data Bits: 8
- Stop Bits: 1
- Flow Control: None

The format of the sentences that are sent:
- **MARK**  
  `$GPWPL,3249.061,N,00710.651,E,MRK002*22`
- **WAYPOINT**  
  `$GPWPL,3933.008,N,00639.969,E,WPT012*22`
- **ROUTE**  
  `$GPWPL,2544.362,N,08011.672,W,WPT003*32`
  `$GPWPL,2543.921,N,08011.481,W,WPT004*31`
  `$GPWPL,2543.493,N,08011.768,W,WPT005*37`
  `$GPRTE,2,1,c,ROUTE01,WPT003,WPT004,WPT005*21`

### 2.11 NMEA DATA PAGE

The NMEA Data page is very useful to see if an external device (example: Depth Sounder) is transmitting NMEA sentences to the GPS Chart Plotter. This page can also be used to see if the GPS Chart Plotter NMEA Output is being loaded down by an external NMEA device the GPS Chart Plotter is connected to. Example: A VHF radio is connected but the radio is not receiving a GPS Position. Usually the VHF radio will be connected to the Green and Brown wires. To check to see if the GPS Chart Plotter is transmitting the sentences:

1. Press [MENU], move the ShuttlePoint knob to highlight **NMEA DISPLAY** and press [ENT].
2. Move the ShuttlePoint knob to highlight **DATA** and press [ENT].
3. The **NMEA DATA** page is shown.
4. Connect the Blue Wire on the GPS Chart Plotter to the junction of the Brown wire and the VHF wire. The display should look similar to the following picture.

![NMEA Data Page](Figure2.11-NMEA-Data-Page.png)
2.12 VIDEO INPUT

By accessing this menu it is possible to see images on the CP390i display from an external video signal source, if connected to the CP390i. It allows the “picture-in-picture” functionality, so a Video Input image can be shown on a window and placed over the Chart, Navigation, Highway, Celestial and NMEA pages image at full screen.

NOTE

If the Video Input signals is not detected (E.g. the video camera is not connected to the Video Input connector), the VIDEO INPUT menu item will be grayed out.

Video Connector

<table>
<thead>
<tr>
<th>Pin</th>
<th>Description</th>
<th>Connection Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Ground</td>
<td>Connect to Video Signal Ground of DVD/VCR/Video Cameras</td>
</tr>
<tr>
<td>2</td>
<td>+ 9 / 12 VDC</td>
<td>Connect to Video Cameras Power Input</td>
</tr>
<tr>
<td>3</td>
<td>Video Signal +</td>
<td>Connect to Video Signal + (NTSC/PAL) of DVD/VCR/Video Cameras</td>
</tr>
</tbody>
</table>

2.12.0 Video Camera Input

The CP390i has one connection for video camera. Any NTSC or PAL camera will operate correctly. To connect use the video output of the camera and connect to the optional ACVC10 cable.

2.12.1 VCR or DVD Input

A VCR or DVD may be connected to Video port. The CP390i does not have speakers so the audio from the VCR or DVD would have to be routed to a stereo system. STANDARD HORIZON offers an optional cable called ACVC10 that allows any VCR or DVD to simply be plugged into the CP390i.

The CP390i has the capability to select the Video Input in three ways.

1. **From the menu**
   1. Press [MENU] twice and move the ShuttlePoint knob to highlight VIDEO INPUT and press [ENT].
   2. A menu appears with 3 options: ACTIVATE VIDEO, SWITCHING TIMEOUT and RESTORE DEFAULTS.
      - To select the video image highlight ACTIVATE VIDEO and press [ENT], a popup window appears with 3 options, see the table below.

<table>
<thead>
<tr>
<th>Full Screen View</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Auto Switch</td>
<td>Shows wrap around the image from video camera at full screen and the selected CP390i page. The intermittence time is selected by Switching Timeout item.</td>
</tr>
</tbody>
</table>
PIP View: Shows the image from the video camera on a window placed over the selected CP390i page. By moving the ShuttlePoint knob, the PiP (Picture-In-Picture) image is moved. When the focus is on the PiP image, press [CLR] to close the PiP image.

After the desired option is chosen, the GPS Chart Plotter will show a Warning message with the instructions to adjust the image from the Video Input. If the user agrees to proceed, the image from the Video Input will be shown.

- To select the intermittence time (the timing to change from Video Input and CP390i display) highlight SWITCHING TIMEOUT and press [ENT]. The possible choices are 5, 10, 30 sec, 1, 5, 10 min.
- To restore the factory defaults for the Input picture adjustment highlight RESTORE DEFAULTS and press [ENT]. The message “Ok...” is shown next to the selected menu item.

2 Quick Activation by pressing [CLR] for 1 second
Pressing and holding [CLR] for 1 second from the Chart page display or from any main page (Navigation, Highway, Celestial, GPS Status, NMEA Display) shows the following Soft Keys:
- [FULL VIEW]: Shows the image from the video camera at full screen.
- [AUTO]: Shows wrap around the image from video camera at full screen and the selected CP390i page.
- [PIP VIEW]: Shows the image from the video camera on a window placed over the selected CP390i page.

If no video signal is detected on the Video Input connector, the Soft Keys will be shown in gray and will not be selectable.

3 Quick Activation by Soft Keys
It is possible to assign the Video Input mode to any of the Soft Keys.
1. Press one of the Soft Keys, the Soft Keys labels are shown.
2. Pressing and holding for 1 second one of the Soft Keys, the Soft Keys customization list will be shown.
3. Highlight VIDEO INPUT and press [ENT] to assign the Soft Key to execute the Video Input function. Once the Soft Key has been assigned to Video Input, its label will show the message [VIDEO].
4. If [VIDEO] is pressed, the Soft Keys will be shown as explained in the previous case 2.

2.13 DEMO MODE (FOR DEALER USE)
In Demonstration Mode the GPS Chart Plotter automatically places a Destination point on the Chart page and simulates navigation to the point. Also, the active page displayed on the screen changes every 10 seconds. The pages are shown in the following order: Start-Up page, GPS Status page, Chart/Compass tape page, Chart/Fish Finder page, Fish Finder full page, Radar page, Navigation page, Highway page, Celestial page, NMEA Display page.

NOTE
This mode is used by dealers to promote the features of the CP390i when on a retail shelf.

The Demo Mode can be selected from the Simulation Menu following the procedure:
1. Press [MENU], move the ShuttlePoint knob to highlight SETUP MENU and press [ENT].
2. Move the ShuttlePoint knob to highlight **ADVANCED SETUP** and press [ENT] or move the ShuttlePoint knob to the right.

3. Move the ShuttlePoint knob to highlight **SIMULATION** and press [ENT] or move the ShuttlePoint knob to the right.

4. Move the ShuttlePoint knob to highlight **DEMO MODE** and press [ENT] or move the ShuttlePoint knob to the right to show the popup window.

5. Move the ShuttlePoint knob to select **ON** and press [ENT] or move the ShuttlePoint knob to the right.

6. Demo Mode is now activated.

Once the Demo Mode is enabled, it is possible to temporarily exit Demo Mode by pressing a key and return to the GPS Chart Plotter normal operation. If a key in not touched for 30 seconds the Demo Mode will re-start.

To disable the Demo Mode follow the procedure above selecting **OFF** at step 5.
3. CONTROLS AND INDICATORS

NOTE
This section defines each control of the CP390i. For instructions, refer to Getting Started and Advanced Settings sections of this Owner's Manual.

NOTE
Throughout this Owner's Manual same conventions are used. See the legend below:
[MENU] If you see brackets around a bold and capital letter word this refers to a key press.
[CHART] If you see brackets around a bold and small capital letter word this refers to a Soft Key press.
GENERAL SETUP When a word(s) is bold capital letters and underlined, this refers to a menu selection item.

3.0 CONTROLS AND CONNECTIONS

The CP390i is controlled by using the keys located on the front panel. These labeled keys are dedicated to specific functions. As you press a key, a single audio beep confirms the key action; every time a key press is not valid, three rapid beeps sound to indicate that the key action is not valid. There is also a ShuttlePoint knob to move the cursor across the screen.

The ZOOM IN and ZOOM OUT keys
- Pressing [ZOOM IN] shows more details of a smaller area, by changing the chart scale and zooming in on your display.
- Press [ZOOM OUT] to change the scale and show a wider, otherwise less detailed view.
- Pressing and holding [ZOOM IN]/[ZOOM OUT] allows for quick zoom, that is the fast change of the chart scale where only the land areas are drawn.

NOTE
The GPS Chart Plotter contains a World Wide Background that allows you to zoom in to 2Nm. For more detail, a C-MAP BY JEPPSENN NT+/MAX C-CARD must be purchased and installed.

The ShuttlePoint knob
- Moves the cursor around the Chart page (Cursor Mode) and pans the chart.
- Used to scroll menu items. When in the menu, moving the ShuttlePoint knob to the right enters a selection and moving the knob to the left clears the function.
- Changes the GPS Chart Plotter from Home Mode to Cursor Mode on the chart screen (for a detailed explanation refer to Par. 3.1.1 “Cursor VS Home Mode”).

The ENT key
Press [ENT] to select the desired option or to confirm the selection.

The CLR key
- Press [CLR] to clear a selected function, step backwards in a menu or exit a menu.

The MENU key
- Selects the Main Menu.
Pressing and holding [MENU] for 3 seconds allows you to change the fields contained within the data windows while on the Chart, Navigation, Highway, GPS Status or NMEA Display page.

**The GOTO key**
- Starts navigation (goto) to a destination point.
- When pressed, a popup window will be shown allowing you to select to start navigation to a Mark, a Route or the position of the cursor.
- To stop navigation, press [GOTO], select [STOP] and press [ENT] in the popup window.

**The MARK key**
Places a Mark under the ship’s position when in Home Mode. When the cursor is shown and [MARK] is pressed it will place a Mark under the location of the cursor.

**The ROUTE key**
- Places a Waypoint.
- Move the cursor and press [ROUTE] to place more Waypoints to form a Route.

**The PWR key (Backlight and Contrast)**
- Press and hold [PWR] to turn the GPS Chart Plotter On or Off.
- Once on, press [PWR] to show and change the Contrast and Backlight settings.

**The MOB key**
- Places a MOB (Man Over Board) mark on the Chart page under the boat’s position to aid in the rescue or a person that may have fallen aboard.
- To delete MOB, press [MOB], select [DELETE] and press [ENT] in the popup window.

**The FIND key**
Allows searching the optional C-MAP BY JEPPESEN NT+/MAX C-CARD for Port Services, Ports, Tide Stations, Wrecks, Obstructions, Points Of Interest, Lakes Information, Lakes By Name, User Points, GPS Coordinates or Information on any point on the chart.

**The Soft Keys**
The 6 keys in the bottom of the front panel (hereinafter named Soft Keys) have different functions associated depending on the software: their labels are shown on the screen immediately above the soft keys (the user can customize the function associated with each soft key).
These keys allow quick selection to the many pages the GPS Chart Plotter has. These keys can be customized to your preference, however from the factory the keys are preprogrammed with the following pages. From left to right [VIDEO], [NAV], [HIGHWAY], [CELEST], [CHART], [LIST]. Press any of the keys and you will see popup windows above the keys. To goto a specific page press the key with the desired popup window. The popup windows will automatically disappear if a key is not pressed or can be removed by pressing [CLR].

### 3.1 GETTING STARTED
The Getting Started section will take you through the frequently used operations and assist you to customize the look of the GPS Chart Plotter.

### 3.1.0 Power On, Off and ShuttlePoint Knob Operation
1. Press and hold [PWR] until the display shows the Start-Up page (see the following picture). To turn Off, press and hold [PWR] until the display turns Off.
2. When the power is first turned on two pages the Start-Up page and the Caution pages are briefly shown before the GPS Status page.

3. When the GPS Chart Plotter is first turned on it will take some time for the GPS to acquire a fix of your position. Look closely at the GPS Status page and you will see satellites and relative signal strengths of each satellite. After a fix is received the GPS Chart Plotter will automatically switch to the Chart page with the ship icon centered on the screen.

4. On the Chart page the ShuttlePoint knob is used to pan around the chart. Move the ShuttlePoint knob to the left and you will notice a cross hair \(\rightarrow\) appear, this is called the cursor.

5. When you move the ShuttlePoint knob you will notice DST and BRG values in the Data window change. This shows the Distance and Bearing from the GPS Fix of your vessel to the position of the Cursor.

6. If the cursor is moved to the edge of the screen the GPS Chart Plotter will automatically pan in the desired direction.
3.1.1 Cursor Vs. Home Mode

Cursor Mode
When the cursor is shown on the Chart page, the GPS Chart Plotter is in Cursor Mode. In Cursor Mode the position of the vessel will not stay in the center of the page and will move right off the edge of the screen (as your boat moves). Cursor Mode allows you to pan around and look at areas on the chart. In this mode you can also create Marks, Routes, measure distance and bearings from your current position.

Home Mode
When the ship icon is shown on the Chart page (cursor is not shown) you are in Home Mode. Now as the ship moves through the water the vessel’s position will be kept in the center of the display.

NOTE
To change from Cursor Mode to Home Mode press [CLR].

3.1.2 Cursor and Menu Selection Speed

The CP390i allow you to control the speed the cursor moves when the ShuttlePoint knob is pressed. To change the speed:

1. Press [MENU], move the ShuttlePoint knob to highlight SETUP MENU and press [ENT].
2. Move the ShuttlePoint knob to highlight GENERAL SETUP and press [ENT] or move the ShuttlePoint knob to the right.
3. Move the ShuttlePoint knob to highlight CURSOR SPEED and press [ENT] or move the ShuttlePoint knob to the right.
4. The menu now shows two selections, Chart and Menu which allow the Cursor Speed to be selected as High, Medium or Low on the Chart page or within the menus.
5. With CHART or MENU selected, press [ENT] or move the ShuttlePoint knob to the right. Move the ShuttlePoint knob to the desired setting and press [ENT] or move the ShuttlePoint knob to the right.
6. Press [CLR] until the menu disappears or an easier method is to press the ShuttlePoint knob to the left a few times.
7. Move the cursor on the Chart page and see if the speed is to your liking.

3.1.3 Changing the Ship Icons

The cursor may be changed to any of the following icons (see Figure 3.1.3). The default setting is Icon 6.
1. Press [MENU], move the ShuttlePoint knob to highlight SETUP MENU and press [ENT].
2. Move the ShuttlePoint knob to highlight GENERAL SETUP and press [ENT] or move the ShuttlePoint knob to the right.
3. Move the ShuttlePoint knob to highlight SHIP ICON and press [ENT] or move the ShuttlePoint knob to the right to show the popup window with ship icons.
4. Move the ShuttlePoint knob to select the desired icon and press [ENT] or move the ShuttlePoint knob to the right to select a new icon.
5. Press [CLR] or move the ShuttlePoint knob to the left to exit the menu and show the Chart page.

3.1.4 Changing Backlight and Contrast

With the CP390i turned on, briefly press [PWR] to show the backlight and contrast popup window. Move the ShuttlePoint knob to the left or right to adjust the LCD backlight intensity or up or down to change the LCD contrast. Press [ENT] to set.

3.1.5 Selecting North Up or Course Up

The default selection is COURSE UP: the top of the Chart page oriented so it will always show the area ahead of the direction your vessel is travelling. Also it is possible to select NORTH UP: the chart is shown with North toward the top of the display.
1. Press [MENU], move the ShuttlePoint knob to highlight SETUP MENU and press [ENT].
2. Move the ShuttlePoint knob to highlight GENERAL SETUP and press [ENT] or move the ShuttlePoint knob to the right.
3. Move the ShuttlePoint knob to highlight COURSE UP/NORTH UP and press [ENT] or move the ShuttlePoint knob to the right.
4. Another popup window will be shown with NORTH UP and COURSE UP, move the ShuttlePoint knob to the desired selection and press [ENT] or move the ShuttlePoint knob to the right.
5. Press [CLR] or move the ShuttlePoint knob to the left to exit the menu and show the Chart page.

**NOTE**

When the CP390i is in Course Up mode a small arrow icon  will be shown on the Chart page indicating North.

3.2 TIME SETUP

The time information supplied by the GPS satellites is in Universal Time Coordinates (UTC or Greenwich England Mean Time). To change the GPS Chart Plotter to read the correct time, first you must know the correct offset for your Time Zone, and then whether or not you are observing Daylight Saving time. For example on the West coast of the United States or Pacific Standard Time the offset needed would be –08:00 or –07:00 for Daylight Saving time, Eastern Standard Time –05:00 or –04:00 for Daylight Saving time.

The Time Setup menu allows you to enter a Time Zone offset for your location, selection to automatically adjust the time for Daylight Saving and to configure the time in 12 or 24 hour formats.
NOTE

By setting the time in the steps below, the time shown on the Celestial page is automatically set up.

1. Press [MENU], move the ShuttlePoint knob to highlight SETUP MENU and press [ENT].
2. Move the ShuttlePoint knob to highlight GENERAL SETUP and press [ENT] or move the ShuttlePoint knob to the right.
3. Move the ShuttlePoint knob to highlight TIME SETUP and press [ENT] or move the ShuttlePoint knob to the right.
4. Move the ShuttlePoint knob to highlight TIME ZONE and press [ENT] or move the ShuttlePoint knob to the right.
5. Look at the table and find the time zone for your area. Move the ShuttlePoint knob up or down to select the desired zone and press [ENT].
6. Next move the ShuttlePoint knob to highlight DAYLIGHT SAVING and press [ENT] or move the ShuttlePoint knob to the right.
7. Daylight Saving menu has 2 options:
   - OFF Select Off when your location does not recognize Daylight Saving Time
   - ON Select On to manually turn Daylight Saving Time On. This is the default.
8. Press [CLR] or move the ShuttlePoint knob to the left until the Chart page is shown.

3.3 SELECTING LORAN TD OR OTHER COORDINATE SYSTEM

The GPS Fix coordinates can be changed to show Latitude/Longitude, Loran TDs or UTM. To change the Coordinate System, follow the procedure below:

1. Press [MENU], move the ShuttlePoint knob to highlight SETUP MENU and press [ENT].
2. Move the ShuttlePoint knob to highlight ADVANCED SETUP and press [ENT] or move the ShuttlePoint knob to the right.
3. Move the ShuttlePoint knob to highlight NAVIGATE and press [ENT] or move the ShuttlePoint knob to the right.
4. Move the ShuttlePoint knob to highlight **COORDINATE SYSTEM** and press [**ENT**] or move the ShuttlePoint knob to the right.
5. Move the ShuttlePoint knob to highlight the desired coordinate type and press [**ENT**] or move the ShuttlePoint knob to the right.
6. Press [**CLR**] or move the ShuttlePoint knob to the left until the Chart page is shown.

**NOTE**

If the TD is selected, you should set the Chain, Pair, ASF1, ASF2 and Alter. If the TD numbers are not correct the Pair letters may be backwards. Reversing the two letters usually solves this issue. Example: Y/Z change to Z/Y.

### 3.4 CHANGING THE DISPLAY COLOR

The CP390i has preprogrammed settings allowing you to customize the look of the pages. The default is Sunlight, however there are other settings: Classic, NOAA, Night and Normal. Night is very useful during evening hours so not to impair night vision.

![Display Color Menu](image)

**Figure 3.4 - Display Color Menu**

1. Press [**MENU**], move the ShuttlePoint knob to highlight **SETUP MENU** and press [**ENT**].
2. Move the ShuttlePoint knob to highlight **GENERAL SETUP** and press [**ENT**] or move the ShuttlePoint knob to the right.
3. Move the ShuttlePoint knob to highlight **DISPLAY COLOR** and press [**ENT**] or move the ShuttlePoint knob to the right.
4. A popup window will be shown with **Normal**, **Classic**, **NOAA**, **Night** and **Sunlight**. Move the ShuttlePoint knob to the desired selection and press [**ENT**] or move the ShuttlePoint knob to the right.
5. Press [**CLR**] or move the ShuttlePoint knob to the left to exit the menu and show the Chart page.

### 3.5 SELECTING LANGUAGE

To ease operation in different countries, the software includes translation and display of the following 16 languages:

- English
- Italian
- French
- German
- Spanish
- Norwegian
- Swedish
- Portuguese
- Chinese (Traditional)
- Danish
- Dutch
- Greek
- Finnish
- Russian
- Chinese (Simplified)
- Japanese
Multilanguage will display the digitized data in the charts as long as the source paper chart was done in the national language. For instance, if a Chinese chart is digitized in English, the digitized data will only display in English. However, if it was digitized in Chinese, then the digitized data can display Chinese or English. The translations are included in menus, data pages, warning/alarm messages, full/quick info, list of objects found by find/nearest function, and on charts (such as place’s names and buoy’s names, etc.).

1. Press [MENU], move the ShuttlePoint knob to highlight SETUP MENU and press [ENT].
2. Move the ShuttlePoint knob to highlight GENERAL SETUP and press [ENT] or move the ShuttlePoint knob to the right.
3. Move the ShuttlePoint knob to highlight LANGUAGE and press [ENT] or move the ShuttlePoint knob to the right.
4. Another popup window will be shown with the available languages, move the ShuttlePoint knob to the desired language and press [ENT] or move the ShuttlePoint knob to the right.

![Figure 3.5 - Language Selection Menu](image)

5. Press [CLR] or move the ShuttlePoint knob to the left to exit the menu and show the Chart page.

**NOTE**

If the selected language is not available on cartographic data, English is used.

### HOW TO RESET LANGUAGE if unable to understand current selected language

If you have accidentally selected a language and are unable to return to the Language Selection Menu, perform the following procedure:

a. Select the Chart page.
b. Press [MENU] two times, move the Shuttlepoint knob to highlight the first (top) selection in the menu and press [ENT].
c. Move the Shuttlepoint knob to highlight the LANGUAGE item and press [ENT].
d. A language window will be shown, select your language and press [ENT].

### 3.6 SELECTING PAGES USING SOFT KEYS

The Soft Keys located under the LCD are used to select the pages quickly without the need to go into the menu. The default pages are VIDEO, NAV, HIGHWAY, CELESTIAL, CHART and LIST.

When one of the Soft Keys is pressed popup windows above each Soft Key are shown with the key description. Press the Soft Key with the desired page description and the GPS Chart Plotter will change to that page.
3.7 CUSTOMIZING THE SOFT KEYS

The Soft Keys can be individually customized from the default pages (discussed above) to the following: CHART, DUAL CHART, CHART/COMPASS, CHART/HIGHWAY, NAVIGATION, HIGHWAY, CELESTIAL, GPS STATUS, DSC LOG, DSC DIRECTORY, NMEA DISPLAY, NMEA DATA, DEPTH TREND, WIND SPEED TREND, TEMP TREND, SOG TREND, MARKS/WAYPOINTS, USER C-CARD, AIS LIST, FIND, VIDEO INPUT, FISH FINDER 50kHz¹, FISH FINDER 200kHz¹, FISH FINDER 50/200kHz¹, FISH FINDER 50kHz/CHART¹, FISH FINDER 200kHz/CHART¹. Also when a SI-TEX Radar antenna is connected (USA ONLY), any Soft Key can be customized to show Radar pages, RADAR FULL, RADAR/CHART, RADAR OVERLAY and RADAR/FISH FINDER¹.

NOTE¹

When the optional FF525 50/200kHz Black Box Fish Finder is connected.

1. To change, momentarily press any of the Soft Keys, then press and hold the Soft Key you want to customize.
2. A popup window will be shown with the above settings.
3. Move the ShuttlePoint knob up or down to select the desired page.
4. Press [ENT] or move the ShuttlePoint knob to the right to save the page to the selected Soft Key.
### 3.8 SETTINGS IN GENERAL SETUP MENU

The **GENERAL SETUP** menu has other selections that allow you to customize the display. All selections are listed below:

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>TIME SETUP</strong></td>
<td>Selects the <strong>Time Zone</strong> offset, enables or disables <strong>Daylight Saving</strong> time, selects 12 or 24 hour <strong>Time Format</strong>.</td>
</tr>
<tr>
<td><strong>DATE FORMAT</strong></td>
<td>Select the Date format <strong>MM-DD-YY</strong> (default), <strong>DD-MM-YY</strong> or <strong>YY-MM-DD</strong>.</td>
</tr>
<tr>
<td><strong>COURSE UP/NORTH UP</strong></td>
<td>Select <strong>North Up</strong> (the top of the page is fixed to North) or <strong>Course Up</strong> (the top of the page is orientated to the direction the vessel is heading). This is the default.</td>
</tr>
<tr>
<td><strong>KEYPAD BEEP</strong></td>
<td>Allows the beep produced when a key is pressed to be turned <strong>On</strong> (default) or <strong>Off</strong>.</td>
</tr>
<tr>
<td><strong>UNITS OF MEASURE</strong></td>
<td>Units of Measure can be selected for <strong>Distance</strong>, <strong>Speed</strong>, <strong>Depth</strong>, <strong>Altitude</strong> and <strong>Temperature</strong>: Distribution: selections are <strong>Nm</strong> (Nautical Miles), <strong>Sm</strong> (Statute Miles), <strong>Km</strong> (Kilometres), <strong>Nm+Ft</strong>, <strong>Nm+Mt</strong>. Note when “Nm+Ft” is selected if the distance is less than 1.0Nm, it turns to feet. When “Nm+Mt” is selected if the distance is less than 1.0Nm, it turns to meters. <strong>Speed</strong>: selections are <strong>Kts</strong> (knots), <strong>MPH</strong> (miles per hour), <strong>Kmh</strong> (kilometer per hour). <strong>Depth</strong>: selections are <strong>Ft</strong> (feet), <strong>FM</strong> (fathoms) and <strong>Mt</strong> (meters). <strong>Altitude</strong>: selections are <strong>Ft</strong> (feet) and <strong>Mt</strong> (meters). <strong>Temperature</strong>: selections are °<strong>F</strong> (Fahrenheit) and °<strong>C</strong> (Celsius).</td>
</tr>
<tr>
<td><strong>NAV AIDS PRESENTATION</strong></td>
<td>Allows the Nav-Aids presentation to be drawn using NOAA symbology when <strong>US</strong> (default) is selected or International symbols when <strong>International</strong> is selected. When selected these functions affect how the icons for Lights, Signals, Buoys and Beacons are displayed.</td>
</tr>
<tr>
<td><strong>DISPLAY COLOR</strong></td>
<td>Changes the background colors to enhance the visibility of the screen depending on the surrounding light conditions. <strong>Normal</strong> is recommended when the GPS Chart Plotter is not exposed to the direct sunlight. When this mode is set the charts are displayed in order to use colors as similar as possible to ones used in the original paper charts. <strong>Classic</strong> uses vivid chart colors presentation. NOAA allows setting NOAA paper chart colors presentation. <strong>Night</strong> is recommended when the environment is dark in order to reduce the glare of the display. The GPS Chart Plotter displays charts and screen in darker colors. <strong>Sunlight</strong> (default) is designed to enhance the visibility of the screen when the GPS Chart Plotter is exposed to sunlight. The charts are much brighter than in the other modes and the depth areas are filled with the white color so different depth areas are not easily distinguishable.</td>
</tr>
<tr>
<td><strong>SHIP ICON</strong></td>
<td>Selects from a variety of ship icons that represent your vessel's position on the Chart page. The default is Icon 6.</td>
</tr>
<tr>
<td><strong>CURSOR SPEED</strong></td>
<td>Selects the speed of the cursor when navigating the Chart page or within the menus. <strong>Low</strong>, <strong>Medium</strong> (default) and <strong>High</strong> are available.</td>
</tr>
<tr>
<td><strong>MEASURE DISTANCE</strong></td>
<td>When this function is On, and the ShuttlePoint knob is moved to a location where you want to start measuring a distance and press <strong>[ENT]</strong>. Move the ShuttlePoint knob to move the cursor to a second location where you want to finish measuring a distance and press <strong>[ENT]</strong>. A line will appear between the Start and Finish points and a popup window will be shown indicating the distance and bearing from the Start and Finish points. Press <strong>[ENT]</strong> to delete both points. (Off is the default).</td>
</tr>
<tr>
<td><strong>START point</strong></td>
<td>![Chart Screen Image] (Provide a description or reference to the image if necessary)</td>
</tr>
<tr>
<td><strong>FINISH point</strong></td>
<td>![Chart Screen Image] (Provide a description or reference to the image if necessary)</td>
</tr>
<tr>
<td><strong>WINDOWS SETUP</strong></td>
<td>Allows the data windows to be customized on the Chart page and Navigation page (refer to Par. 12.0.2).</td>
</tr>
<tr>
<td><strong>LANGUAGE</strong></td>
<td>Allows changing the language for menus and data screens.</td>
</tr>
<tr>
<td><strong>AUTO INFO</strong></td>
<td>When the cursor is moved over a buoy, Mark or other item a popup window will show information of the item. This menu item allows the window to be turned Off, <strong>On Points</strong> (default) or <strong>On All</strong>.</td>
</tr>
</tbody>
</table>
CURSOR WINDOW
By default when the cursor is moved on the chart a window is shown with the Lat/Lon Distance and Bearing from the vessel’s location to the cursor. This selection allows the window to be turned On (default) or Off. The Cursor Window is automatically disabled when General is set in Windows Setup option.

CURSOR POSITION
The position of the cursor can be customized so it is centered in the middle (if Center selected, default) or centered on the bottom of the Chart page (if Bottom selected).

COG TIME LINE
It is a line projected from the ship icon which indicates the distance your vessel will travel at the current speed. Selections are 2, 10 (default), 30 minutes, 1, 2 hours and infinite.

COMPASS ROSE
Allows selection of compass direction indication around Ship Icon. The default is Off.

3.9 ABOUT PAGE
From Main Menu page it is possible to select the About page containing Software, Chart and optional devices information.
1. Press [MENU], move the ShuttlePoint knob to highlight SETUP MENU and press [ENT].
2. Move the ShuttlePoint knob to highlight About... and press [ENT] or move the ShuttlePoint knob to the right.
3. The Information page appears on the screen (see the following Figure).
4. Press [CLR] or move the ShuttlePoint knob to the left to exit and show the Chart page.

1. **Software System Information**

2. **Cartography Information**

3. **Storage Capacity**

---

Figure 3.9 - Example of About page
4. FIND SERVICES

4.0 USING FIND SERVICES & MORE FUNCTIONS

The CP390i has a dedicated [FIND] key that allows searching the optional C-MAP By JEPPESEN NT+/MAX C-CARD for Port Services, Ports, Tide Stations, Wrecks, Obstructions, Points Of Interest, Lakes, User Points, GPS Coordinates or Information on any point on the chart.

4.0.0 Port Services

This feature is used to locate Port Services nearest the position of your vessel. The table below shows a list of some of the available Port Services and icons shown on the Chart page:

<table>
<thead>
<tr>
<th>Health Emergency</th>
<th>Harbour Master</th>
<th>Coast Guard</th>
<th>Engine Repairs</th>
<th>Fuel Station</th>
<th>Water</th>
<th>Promotions</th>
<th>Car Parking</th>
<th>Seawater Pumpout</th>
<th>Public Telephone</th>
<th>Public Radio</th>
<th>Transport Services</th>
</tr>
</thead>
<tbody>
<tr>

</tbody>
</table>

Figure 4.0.0 - Port Services Table

1. Press [FIND].
2. Move the ShuttlePoint knob to highlight PORT SERVICES and press [ENT] or move the ShuttlePoint knob to the right.
3. A popup window will be shown with a list of different Port Services.
4. Move the ShuttlePoint knob to highlight the desired type of service and press [ENT].
5. Another popup window will appear displaying the distance and position of the services closest to your location.
6. Using the ShuttlePoint knob, highlight the desired service and press [ENT]. This will show information about the service.
7. Press [CLR] to show the actual position of the service on the Chart page.
8. Press [CLR] again at any time to return your cursor to your vessel's position.
4.0.1 Port

A Port is represented with a on the Chart page. This feature is used to locate the 20 nearest Ports to the position of your vessel.

1. Press [FIND].
2. Move the ShuttlePoint knob to highlight PORT and press [ENT] or move the ShuttlePoint knob to the right.
3. A popup window will be shown with a list of nearest Ports.
4. Move the ShuttlePoint knob to highlight the desired Port and press [ENT].
5. Another window will appear displaying the details of the selected Port.
6. Press [CLR] to show the actual position of the Port on the Chart page.
7. Press [CLR] again at any time to return your cursor to your vessel’s position.

4.0.2 Tide Stations

A Tide Station is represented with a on the Chart page. This feature is used to locate the 20 nearest Tide Stations to the position of your vessel. Once a Tide Station is selected the Tide Graph can be used to determine Tide height and draught of the Tide based on a user-specified time.

1. Press [FIND].
2. Move the ShuttlePoint knob to highlight TIDE STATIONS and press [ENT] or move the ShuttlePoint knob to the right.
3. A popup window will be shown with a list of nearest Tide Stations.
4. Move the ShuttlePoint knob to highlight the desired Tide Station and press [ENT].
5. Another window will be shown detailing the selected Tide Station information.
6. Press [CLR] to show the actual position of the Tide Station on the Chart page.
7. Press [CLR] again at any time to return your cursor to your vessel’s position.

Refer to the image above. The time displayed corresponds to the location of the cross-hair cursor in the Tide Graph. Moving the ShuttlePoint knob to the left or right changes the time, and moving the ShuttlePoint knob up or down selects the Tide height and Tide draught on the Tide Graph.

**NOTE**
The Local Offset matches the Time Offset entered in the Time Setup Menu (see Par. 3.2)

### 4.0.3 Wrecks

This feature is used to locate the 20 nearest Wrecks to the position of your vessel. A Wreck is represented with an icon on the chart. See the following table:

<table>
<thead>
<tr>
<th>ICON</th>
<th>DESCRIPTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>++</td>
<td>non-dangerous wreck</td>
</tr>
<tr>
<td>++</td>
<td>dangerous wreck</td>
</tr>
<tr>
<td>#</td>
<td>distributed remains of wreck</td>
</tr>
<tr>
<td>+++</td>
<td>wreck showing mast/masts</td>
</tr>
<tr>
<td>⚓</td>
<td>wreck showing any portion of hull or superstructure</td>
</tr>
</tbody>
</table>

1. Press [FIND].
2. Move the ShuttlePoint knob to highlight **WRECKS** and press [ENT] or move the ShuttlePoint knob to the right.
3. A popup window will be shown with a list of nearest Wrecks.
4. Move the ShuttlePoint knob to highlight the desired Wreck and press [ENT].
5. Another window will be shown detailing the Wreck information.
6. Press [CLR] to show the actual position of the Wreck on the Chart page.
7. Press [CLR] again at any time to return your cursor to your vessel’s position.

4.0.4 Obstructions

This feature is used to locate the 20 nearest Obstructions to the position of your vessel. An Obstruction is represented with an icon on the chart, see the following table:

<table>
<thead>
<tr>
<th>ICON</th>
<th>DESC.</th>
<th>snag / stump</th>
<th>wellhead</th>
<th>diffuser</th>
<th>crib</th>
<th>fish haven</th>
<th>foul area</th>
<th>foul ground</th>
<th>ice boom</th>
<th>ground tackle</th>
</tr>
</thead>
</table>

1. Press [FIND].
2. Move the ShuttlePoint knob to highlight **OBSTRUCTIONS** and press [ENT] or move the ShuttlePoint knob to the right.
3. A popup window will be shown with a list of nearest Obstructions.
4. Move the ShuttlePoint knob to highlight the desired Obstruction and press [ENT].
5. Another window will be shown detailing the Obstruction information.
6. Press [CLR] to show the actual position of the Obstruction on the Chart page.
7. Press [CLR] again at any time to return your cursor to your vessel’s position.

4.0.5 Lakes Information

A Lake Info is represented with a on the Chart page. This feature is used to find information on the 20 closest Lakes near the position of your vessel.

**NOTE**

An optional MAX Lake CARD must be inserted into the GPS Chart Plotter to take advantage Lakes Information. The available MAX Lake CARDS are: NA-M017 USA: North; NA-M018 USA: East; NA-M019 USA: South; NA-M020 USA: West; NA-M029: Alaska; NA-M048: Canada.

1. Press [FIND].
2. Move the ShuttlePoint knob to highlight **LAKES INFORMATION** and press [ENT] or
move the ShuttlePoint knob to the right.
3. A popup window will be shown with a list of Outdoor Recreational Area objects.
4. Move the ShuttlePoint knob to highlight the desired object and press [ENT].
5. Another popup window will appear displaying the distance and position of the Lakes nearest to your location.
6. Using the ShuttlePoint knob, highlight the desired Lake and press [ENT]. This will show information on the Lake.
7. Press [CLR] to show the actual position of the Lake on the Chart page.
8. Press [CLR] twice to return your cursor to your vessel’s position.

**4.0.5.0 Quick Info On Lakes**

Upon viewing the chart of a lake, you can click on the Lake Info icon to query the available information immediately displayed with many details. For example, see the following picture:

When the cursor is placed over the icon, the icons of the available services are shown:
If you press [EXPAND] all available information about the cartographic point under the cursor will be shown. See the next paragraph.

4.0.5.1 Full Info On Lakes
The following is an example of Full Info on Lakes:

To see the "Fishing" object press [MENU] (when the "Fishing" object is highlighted). On the screen appears:

4.0.6 Lakes By Name
This feature is used to locate Lakes By Name nearest the position of your vessel.
1. Press [FIND].
2. Move the ShuttlePoint knob to highlight LAKES BY NAME and press [ENT] or move the ShuttlePoint knob to the right.
3. A popup window will be shown with a list of nearest Lakes.
4. Move the ShuttlePoint knob to highlight the desired Lake. Otherwise press [MENU] to enter the desired Lake name. A window will be shown: move the ShuttlePoint knob to highlight the edit of Lake name and press [ENT] to accept: another popup window will
appear displaying the distance and position of the Lake.
5. Press [ENT] to show the actual position of the Lake on the Chart page.
6. Press [CLR] twice to return your cursor to your vessel’s position.

### 4.0.7 Points Of Interest

This feature is used to locate Points Of Interest nearest the position of your vessel.
1. Press [FIND].
2. Move the ShuttlePoint knob to highlight **POINTS OF INTEREST** and press [ENT] or move the ShuttlePoint knob to the right.
3. A (Category) popup window will be shown with a list of Category types (i.e. attractions, emergency, entertainment).
4. Move the ShuttlePoint knob to highlight the desired Category and press [ENT].
5. A (Type) popup window will be shown with a list of types.
6. Move the ShuttlePoint knob to highlight the desired Type and press [ENT].
7. A popup window will be shown with a list of nearest Points Of Interest that fall into the Category and Type you have selected.
8. Move the ShuttlePoint knob up/down to highlight the desired Point Of Interest and press [ENT].
9. Another window will be shown with detailing the Point Of Interest information.
10. Press [CLR] to show the actual position of the Point Of Interest on the Chart page.
11. Press [CLR] again at any time to return your cursor to your vessel’s position.

![Figure 4.0.7 - Find Points Of Interest](image)

### 4.0.8 User Points

This feature is used to search for User Points (Marks and Waypoints you have created and stored) by name quickly and efficiently.
1. Press [FIND].
2. Move the ShuttlePoint knob to highlight **USER POINTS** and press [ENT] or move the ShuttlePoint knob to the right.
3. The (Select Name) popup window will appear. This window will allow you to enter in the name of the User Point you wish to locate.
4. Move the ShuttlePoint knob up/down to change each number or letter and left/right to move to the next or previous position in the name of the Mark.
5. Once the name of the desired Mark reads in the (Select Name) window, press [ENT] to show the location the Mark on the Chart page.
6. Press [CLR] at any time to return your cursor to your vessel's position.

![Figure 4.0.8 - Find User Points (Marks and Waypoints)](image)

### 4.0.9 Coordinates

This feature allows you to enter Coordinates (Latitude/Longitude) and view the entered position on the Chart page.

1. Press [FIND].
2. Move the ShuttlePoint knob to highlight **COORDINATES** and press [ENT] or move the ShuttlePoint knob to the right.
3. A (Coordinate) popup window will be shown to allow you to enter in a specified Latitude and Longitude.
4. Move the ShuttlePoint knob up/down to change each number or letter and left/right to move to the next or previous position in the Coordinates.
5. Once the Coordinates are entered, press [ENT] to show the location the Mark on the Chart page.
6. Press [CLR] at any time to return your cursor to your vessel's position.

![Figure 4.0.9 - Find GPS Coordinates](image)

### 4.0.10 Information

This feature allows you to obtain information on any position on the Chart page.

1. Press [FIND].
2. Move the ShuttlePoint knob to highlight **INFORMATION** and press [ENT] or move the ShuttlePoint knob to the right.
3. A page will be shown with objects information. The upper side of the page contains the Info Tree and the lower side contains the expanded information. While moving the ShuttlePoint knob through the Info Tree, all the relevant information of the selected object is shown on the lower part of the page.
4. Press [CLR] again at any time to return your cursor to your vessel's position.

Figure 4.0.10 - Find Information
5. MAX CARTOGRAPHY OVERVIEW

5.0 INSERTING THE OPTIONAL MAX C-CARD

Hold the C-CARD by the long inclined side so that you can see the C-MAP BY JEPPESSEN label.

Open the door, gently push the C-CARD into the slot: push the C-CARD in as far as it will go, then close the door.

NOTE

The small connector below the C-CARD is only used by STANDARD HORIZON repair technicians.

Key points are:

Data Features

- **ISO Certification** *(electronic chart production process with quality certification)*
- **Extra Large Coverage** *(all the C-MAP electronic chart detail and a huge coverage without having to change cartridge)*
- **Official data source** *(data based on use of official data sources Hydrographic Offices Release)*
- **Detailed World Background** *(World Wide Background chart with details)*
- **Depths & Land Elevations** *(color shading of sea depth and land altitude for improved chart appearance)*
· Bathymetric & Spot Soundings (Data Base with depth and bathy information for an extraordinary view of the seabed depth)
· Detailed Port Plan to information (complete port and marina charts with detail)
· Search & Find (quickly locates chart contents and objects)
· Tides Preview (allows viewing of current, future and past tide cycles of specific NOAA Tide Stations)
· Dynamic Currents (current arrows showing speed and direction of current, future and past currents)
· Dynamic Nav-Aids (selection to enable the Nav-Aids to blink to their specifications and appear on the chart in color)
· Port Info (searchable data base of service in ports)
· Enhanced Port Info & Roads (searchable data base of detailed information that include facilities and services in ports and surrounding areas)
· Object Info (moving cursor over object to show restricted area details and related information)
· Quick Info (moving cursor over wrecks, shoals, Nav-Aids to show restricted area details and related information and object to show details)
· Photos & Diagrams (high definition pictures of ports, piers, bridge diagrams and nav-aids)
· Multilanguage Support (allows the GPS Chart Plotter to show language of your choice in using proper character set for Asian and other countries)
· True-Type Font (improves text on chart for optimal reading)

Presentation Features
· Clear View (advanced legibility techniques providing more chart data on the screen)
· Clear Info (sophisticated "Human Dictionary" to translate Nav-Aid abbreviations found on paper charts)
· Flexi-Zoom (increased Under and Over Zoom between chart levels, resulting in optimal scale display for any situation)
· Perspective View ("Real World" perspective view of the chart, updated real-time during navigation)
· Enhanced Mixing Levels (seamless data presentation)
· Off-line redraw (cartography level transition without image construction)

Cartographic Data related Features
· Grounding Alarm (the Grounding Alarm is a user defined area in front of your vessel to alert you while navigating of possible obstacles on the chart)
· Safety Status Bar (status bar with six boxes to show the status of certain functions. Any warning or alarm condition is identified by the red color to indicate possible risk)
· Safety Route Check (sophisticated function that checks for dangerous objects along your navigation route)
6. MAP FUNCTIONS

6.0 MAX FUNCTIONS MENU

1. Press [MENU], move the ShuttlePoint knob to highlight SETUP MENU and press [ENT].
2. Move the ShuttlePoint knob to highlight MAX FUNCTIONS and press [ENT] or move the ShuttlePoint knob to the right. The MAX Functions Menu appears on the screen:

<table>
<thead>
<tr>
<th>MAX FUNCTIONS</th>
</tr>
</thead>
<tbody>
<tr>
<td>ZOOM TYPE Standard</td>
</tr>
<tr>
<td>ICON SIZE Standard</td>
</tr>
<tr>
<td>PLACE NAMES SIZE Standard</td>
</tr>
<tr>
<td>PERSPECTIVE VIEW Off</td>
</tr>
<tr>
<td>DYNAMIC NAV-AIDS On</td>
</tr>
<tr>
<td>SAFETY STATUS BAR Off</td>
</tr>
<tr>
<td>SATELLITE IMAGERY On</td>
</tr>
<tr>
<td>CURRENTS PREDICTION</td>
</tr>
<tr>
<td>CHART LANGUAGE</td>
</tr>
</tbody>
</table>

The available Max Functions Menu is described in the following.

6.0.0 Zoom Type

Zoom Type refers to the chart scale selection. It has two options: Standard (default) or Flexi-Zoom. When Zoom Type is set to Flexi-Zoom, a short [ZOOM IN]/[ZOOM OUT] push causes a change of chart level, while a long [ZOOM IN]/[ZOOM OUT] push (press and hold) causes an expansion or compression of the chart image, without a chart level change.

---

Long push

Short push

Figure 6.0.0 - Zoom Type
Note that in the top of the previous picture the chart scale remains the same but it is graphically compressed. By pressing [ZOOM IN][ZOOM OUT] a popup window is displayed on a corner of the chart screen. The window shows the current zoom factor: Normal is the original chart level (1:1 scale), Over-Zoom x2, x4, x16, x32, Under-Zoom x1/2, x1/4.

To activate this function follow the procedure:
1. Press [MENU], move the ShuttlePoint knob to highlight SETUP MENU and press [ENT].
2. Move the ShuttlePoint knob to highlight MAX FUNCTIONS and press [ENT] or move the ShuttlePoint knob to the right.
3. Move the ShuttlePoint knob to highlight ZOOM TYPE and press [ENT] or move the ShuttlePoint knob to the right.
4. The menu now shows two selections, STANDARD or FLEXI-ZOOM.
5. Move the ShuttlePoint knob to select the selection and press [ENT].
6. Press [CLR] until the menu disappears or an easier method is to move the ShuttlePoint knob to the left a few times.

6.0.1 Icons Size

On MAX charts it is possible to set the size of all icons drawn on the charts, selecting between Standard (default) and Large size.

To activate this function follow the procedure:
1. Press [MENU], move the ShuttlePoint knob to highlight SETUP MENU and press [ENT].
2. Move the ShuttlePoint knob to highlight MAX FUNCTIONS and press [ENT] or move the ShuttlePoint knob to the right.
3. Move the ShuttlePoint knob to highlight ICONS SIZE and press [ENT] or move the ShuttlePoint knob to the right.
4. The menu now shows two selections, STANDARD or LARGE.
5. Move the ShuttlePoint knob to select the selection and press [ENT].
6. Press [CLR] until the menu disappears or an easier method is to move the ShuttlePoint knob to the left a few times.

6.0.2 Place Names Size

On MAX charts it is possible to set the size of all names drawn on the charts, selecting between Standard (default), Medium and Large size.
To activate this function follow the procedure:
1. Press [MENU], move the ShuttlePoint knob to highlight **SETUP MENU** and press [ENT].
2. Move the ShuttlePoint knob to highlight **MAX FUNCTIONS** and press [ENT] or move the ShuttlePoint knob to the right.
3. Move the ShuttlePoint knob to highlight **PLACE NAMES SIZE** and press [ENT] or move the ShuttlePoint knob to the right.
4. The menu now shows three selections, **STANDARD**, **MEDIUM** or **LARGE**.
5. Move the ShuttlePoint knob to select the selection and press [ENT].
6. Press [CLR] until the menu disappears or an easier method is to move the ShuttlePoint knob to the left a few times.

### 6.0.3 Perspective View

The Chart page may be show in a perspective (fly over) or normal mode during navigation. Perspective view of the chart is a type of “bird’s eye” view of a chart, and give you a more realistic perspective of the chart. As the upper side of the chart is more compressed than the lower side, a wider chart area is visible, so it allows showing more chart information immediately ahead and around the cursor.

To activate this function follow the procedure:
1. Press [MENU], move the ShuttlePoint knob to highlight **SETUP MENU** and press [ENT].
2. Move the ShuttlePoint knob to highlight **MAX FUNCTIONS** and press [ENT] or move the ShuttlePoint knob to the right.
3. Move the ShuttlePoint knob to highlight **PERSPECTIVE VIEW** and press [ENT] or move
the ShuttlePoint knob to the right.

4. The menu now shows two selections, **ON** or **OFF**.
5. Move the ShuttlePoint knob to select the selection and press [ENT].
6. Press [CLR] until the menu disappears or an easier method is to move the ShuttlePoint knob to the left until the Chart page is shown.

### 6.0.4 Dynamic Nav-Aids

This function allows the blinking of the Nav-Aids to be turned On or Off. The blink period and color of each Nav-aid is read from the Nav-Aid attributes stored on the optional C-MAP By **JEPESEN** C-CARD. When the ship is inside the Nav-Aid nominal range, the light of the Nav-Aid will start blinking. When Dynamic Nav-Aids option is set to On, when the flashing light is Off, or when fix position is out of the sector, the light color is displayed by using a faint light color.

To activate this function follow the procedure below:

1. Press [MENU], move the ShuttlePoint knob to highlight **SETUP MENU** and press [ENT].
2. Move the ShuttlePoint knob to highlight **MAX FUNCTIONS** and press [ENT] or move the ShuttlePoint knob to the right.
3. Move the ShuttlePoint knob to highlight **DYNAMIC NAV-AIDS** and press [ENT] or move the ShuttlePoint knob to the right.
4. The menu now shows two selections, **ON** or **OFF**.
5. Move the ShuttlePoint knob to select the selection and press [ENT].
6. Press [CLR] until the menu disappears or an easier method is to move the ShuttlePoint knob to the left until the chart page is shown.

### 6.0.5 Safety Status Bar (DSI - Data Safety Indicator)

When the Safety Status Bar is enabled, a status bar with six boxes show the status of certain functions. Any warning or alarm condition is identified by the red color to indicate possible risk.

To activate this function follow the procedure:

1. Press [MENU], move the ShuttlePoint knob to highlight **SETUP MENU** and press [ENT].
2. Move the ShuttlePoint knob to highlight **MAX FUNCTIONS** and press [ENT] or move the ShuttlePoint knob to the right.
3. Move the ShuttlePoint knob to highlight **SAFETY STATUS BAR** and press [ENT] or move the ShuttlePoint knob to the right.
4. The menu now shows the following selections:
   - **ON**: The Safety Status Bar is shown
   - **OFF**: The Safety Status Bar is not shown
   - **ICON**: In this mode the Safety Status Bar is not shown, rather a Warning Icon 🚨 will be shown in the top right corner on the chart page when an alarm condition is met.
5. Move the ShuttlePoint knob to select the selection and press [ENT].
6. Press [CLR] until the menu disappears or an easier method is to press the ShuttlePoint knob to the left a few times.
6.0.6 Satellite Imagery

This function allows to overlay the Satellite image for background chart. When it is set On, the Palette is set to Normal to display the proper colors.

**NOTE**

The satellite image is only shown on 100NM, 50NM and 20NM scales.

To activate this function follow the procedure below:

1. Press [MENU], move the ShuttlePoint knob to highlight **SETUP MENU** and press [ENT].
2. Move the ShuttlePoint knob to highlight **MAX FUNCTIONS** and press [ENT] or move the ShuttlePoint knob to the right.
3. Move the ShuttlePoint knob to highlight **SATELLITE IMAGERY** and press [ENT] or move the ShuttlePoint knob to the right.
4. The menu now shows two selections, **ON** or **OFF**.
5. Move the ShuttlePoint knob to select the selection and press [ENT].
6. Press [CLR] until the menu disappears or an easier method is to move the ShuttlePoint knob to the left until the Chart page is shown.
6.0.7 Currents Prediction

The worldwide database with Tidal stream information is available with MAX C-CARDs. When data/time is available, Tidal stream arrows are shown on the charts, indicating the direction and strength of the Tide:

If no data/time is available from the GPS or the GPS Chart Plotter is not in Simulation Mode, the icon on the chart is a generic one. The color of the arrow denotes the strength of the current as follows:

When the GPS Chart Plotter receives a valid position fix, the Tide icons are shown on the charts on the basis of the current date and time: the screen displays and changes arrows as date/time changes.

It is possible to see the variation of the Tidal arrows on the selected area at any given time. To activate this function follow the procedure:

1. Press [MENU], move the ShuttlePoint knob to highlight SETUP MENU and press [ENT].
2. Move the ShuttlePoint knob to highlight MAX FUNCTIONS and press [ENT] or move the ShuttlePoint knob to the right.
3. Move the ShuttlePoint knob to highlight CURRENTS PREDICTION and press [ENT] or
move the ShuttlePoint knob to the right.

4. A window is shown on the low-left side of the chart. Press [SET TIME] to set the date and time manually, and [INCR. TIME]/[DECR. TIME] to decrease/increase time; press [EXIT] to exit.

6.0.8 Chart Language

The CP390i may be customized to show the local language of the chart.

To select the Chart Language you want:
1. Press [MENU], move the ShuttlePoint knob to highlight SETUP MENU and press [ENT].
2. Move the ShuttlePoint knob to highlight MAX FUNCTIONS and press [ENT] or move the ShuttlePoint knob to the right.
3. Move the ShuttlePoint knob to highlight CHART LANGUAGE and press [ENT] or move the ShuttlePoint knob to the right. A new popup window will appear on the screen. The available functions are described in the table below.

<table>
<thead>
<tr>
<th>Language</th>
<th>Allows setting the language to display chart information. The language is chosen among the list of languages available on the cartographic data (data cartridge or embedded charts).</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mode</td>
<td>Defines how objects are translated. Selections are:</td>
</tr>
<tr>
<td>Off</td>
<td>Enables the language chosen in the Language menu above. If the selected language is not present on the objects information, English is used.</td>
</tr>
<tr>
<td>English</td>
<td>Always uses English.</td>
</tr>
<tr>
<td>Local</td>
<td>Uses the Local language present on C-MAP BY JEPPESEN C-CARD. If no Local language is available, English is used.</td>
</tr>
</tbody>
</table>

4. After the selection is made, press [CLR] repeatedly or move the ShuttlePoint knob to the left repeatedly until the Chart page is shown.

NOTE

a. When the Chart Language is changed, the following settings are automatically selected: MODE is set to Off and Chart Language is set to your selection.
b. If the C-CARD is removed or changed, the Chart Language should be confirmed and changed if necessary.

6.0.9 Pictures and Diagrams

Using optional C-MAP BY JEPPESEN MAX data cards allows you to show pictures or diagrams on the CP390i display. These Pictures are typically used to facilitate the identification of cartographic objects or places around the chart: they can be the landscape layout nearby a harbour, the shape of a bridge or of a buoy etc. On some objects, such as bridges, the image associated can represent the Diagram representing the shape of the objects and the various characteristics (length, height, type of bridge etc.).

Figure 6.0.9 - Pictures and Diagrams
How to Show Pictures or Diagrams of an Object

They are shown on the Chart page with the camera icon, see the figure below:

Move the cursor over the camera icon. You are get the quick info on the object and there is the camera icon on the top bar of the window:

Press [IMAGE] for 1 second to display the image on the screen:

Otherwise press [EXPAND] to open the Full Info on the object. Note that on the Full Info, there is the small camera icon on a corner of the square containing the object icon. To see the picture press [MENU] when the object with a picture is highlighted.

When the picture is shown, it is possible to fit it to screen by pressing [ENT], to change the contrast by pressing [ZOOM IN] or [ZOOM OUT] and to display the next picture associated, if any, by moving the ShuttlePoint knob left or right.
6.0.10 Enhanced Port Info

Optional C-MAP BY JEPPESEN MAX C-CARDS include additional Port Services that were not present before. Additional attributes of Port Areas and Port Marinas have been included as Location, Country, Region, State, Harbour master telephone number etc., see the following figure.

Figure 6.0.10 - Example of enhanced Port Info
7. CREATING MARKS

A User Point is an object that you can place on the charts to mark a specific point. The GPS Chart Plotter features two types of User Points: Marks and Waypoints.

- Mark can be a stand alone position or be linked to a Route. A Mark is place on the Chart page using the [MARK] key or by entering in information in the Marks/Waypoints List page and selecting NEW MARK.
- Waypoints are always liked to a Route. They are placed on the Chart page using the [ROUTE] key.

NOTE
The difference between a Mark and a Waypoint is
a. when a Route is created using Waypoints and the Route is deleted the Waypoints are also deleted.
b. if a Route is created using Marks and the Route is deleted the Marks remain.

7.0 CREATING A NEW MARK USING THE CHART PAGE

1. Move the ShuttlePoint knob to the desired or approx. Lat/Lon and press [MARK].
2. You will notice a Mark is placed under the location of the cursor and a popup window is shown with the exact Lat/Lon of the Mark.
3. If the position is incorrect press [EDIT] that will allow you to change the position, Mark name and icon type. Refer to Par. 7.1 for details.

![Figure 7.0 - Mark creation](image)

NOTE
After entering in all the Marks it is a good practice to backup the points to an User C-CARD. Refer to Chapter 11.

7.1 EDITING A MARK

If a Mark has previously been created and you wish to Edit it, move Cursor over the top of the Mark.
1. After a Mark is created press [Edit] to show the edit popup window.
2. The Mark Icon is selected, press [ENT]. A popup window appears:

![Mark Icons](image)

3. Move the ShuttlePoint knob to select the desired Mark Icon, when finished press [ENT].
4. Move the ShuttlePoint knob to the right to select the Mark Name. Press [ENT] and the first digit in the name will be highlighted.
5. Move the ShuttlePoint knob up or down to select the first character.
6. Move the ShuttlePoint knob to the right to select the next character.
7. Repeat steps 4 and 5 until the Mark name is shown. Press [ENT].
8. Move the ShuttlePoint knob to the right to select the Lat/Lon and press [ENT].
9. Move the ShuttlePoint knob up or down to select the first character.
10. Move the ShuttlePoint knob to the right to select the next character.
11. Repeat steps 9 and 10 until the desired position is shown. Press [ENT] and [CLR] to store the Mark.

### 7.1.0 Deleting a Mark or Waypoint

1. Move the ShuttlePoint knob over the Mark or Waypoint to delete.
2. Press [DELETE]. A popup window will be shown to confirm deleting the point.
3. Move the ShuttlePoint knob to highlight **YES** and press [ENT].

### 7.1.1 Moving a Mark or Waypoint

1. Move the ShuttlePoint knob over the Mark or Waypoint you want to move.
2. Press [Move].
3. Use the ShuttlePoint knob to move the cursor. A dotted line, connecting the previous Waypoint position to the new position, is shown:

![Moving Mark or Waypoint](image)
4. Press [ENT] ([CLR] to abort the move), the Waypoint appears in the new position.

![Figure 7.1.1a - Moving Mark or Waypoint (2)](image)

### 7.2 MARKS/WAYPOINTS LIST

The MARKS/WPTS List shows all the Marks and Waypoints that have been stored into the GPS Chart Plotter. This page also allows you to:

<table>
<thead>
<tr>
<th>ICON</th>
<th>Sorts by icon type. Selections are:</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. SELECT</td>
<td>only User Points with the selected icon are shown</td>
</tr>
<tr>
<td>b. ALL</td>
<td>all User Points are shown</td>
</tr>
</tbody>
</table>

| FIND | Searches through the Marks or Waypoints to find a point by name using the ShuttlePoint knob. |
| LOCATE | Shows the position of a Mark or Waypoint on the Chart page. |
| EDIT | Edits a previous stored Mark or Waypoint. |

<table>
<thead>
<tr>
<th>SORT</th>
<th>Sorts the name of User Points. Selections are:</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. A-Z ASCENDING</td>
<td>sorts the name of the Mark or Waypoint in ascending order</td>
</tr>
<tr>
<td>b. Z-A DESCENDING</td>
<td>sorts the name of the Mark or Waypoint in descending order</td>
</tr>
</tbody>
</table>

| NEW MARK | Enters in Marks, editing icon type and position. |
| MODE | Controls how the Marks or Waypoints are shown on the Chart page. Selections are: |
| a. SHOW | icon and name are shown |
| b. ICON | only icon (no name) is shown |
| c. HIDE | Mark or Waypoint is hidden |
| d. SHOW ALL | all Marks or Waypoints are shown |
| e. ICON ALL | all icons are shown without name |
| f. HIDE ALL | all Marks or Waypoints are hidden |

| DELETE | Allows to delete the selected point. |
| DEL ALL | Allows to delete all stored points. |

| SEND* | Sends the stored points to an external device (PC) capable of listening to NMEA WPL and RTE sentences. |
| RECEIVE* | Receives points from an external device (PC) that is capable of sending NMEA WPL sentence. |

**NOTE***

The SEND and RECEIVE functions are used to receive or transmit User Points (Marks and Waypoints) to and from a Personal Computer (see also Par. 2.9).

![Figure 7.2 - Example of Marks/Waypoints List](image)
7.3 CREATING A NEW MARK WITH THE USER POINTS LIST

NOTE
This function is very useful if you have a list of Marks that you want to enter into the GPS Chart Plotter.

1. Press [MENU], move the ShuttlePoint knob to highlight USER POINTS and press [ENT].
2. Move the ShuttlePoint knob to highlight MARKS/WPTS and press [ENT].
3. The Marks/Waypoints List page will be shown (see previous Figure).
4. To create a New Mark, move the ShuttlePoint knob to the right to highlight NEW MARK and press [ENT]. A row is added for the new Mark.
5. Move the ShuttlePoint knob to highlight EDIT and press [ENT]; then press [ENT] again to display a popup icons window and change the icon.
6. Move the ShuttlePoint knob to highlight the desired Icon and press [ENT].
7. Move the ShuttlePoint knob to the right to select the Mark name. Press [ENT] and the first digit in the name will be highlighted.
8. Move the ShuttlePoint knob up or down to select the first character.
9. Move the ShuttlePoint knob to the right to select the next character.
10. Repeat steps 8 and 9 until the Mark name is shown. Press [ENT].
11. Move the ShuttlePoint knob to the right to select the Lat/Lon and press [ENT].
12. Move the ShuttlePoint knob up or down to select the first character.
13. Move the ShuttlePoint knob to the right to select the next character.
14. Repeat steps 12 and 13 until the desired position is shown. Press [ENT].
15. Move the ShuttlePoint knob to the right to select the MODE field and press [ENT].
16. Move the ShuttlePoint knob up or down to select the mode to show the Mark. You can choose among SHOW to show on the chart the name and icon of Mark, ICON to show on the chart only the icon of Mark or HIDE to hide on the Chart page the created Mark. Press [ENT].
17. Press [CLR] to save the created Mark.

WARNING
After entering in all the Marks it is a good practice to backup the points to a User C-CARD. Refer to Chapter 11.

7.4 GOTO CURSOR, ROUTE AND MARK

The CP390i can easily be set to start navigating to the cursor on the Chart page, a saved Mark or a Route that was created.

7.4.0 Goto Cursor

1. Move the ShuttlePoint knob to the exact position you want to navigate to.
2. Press [GOTO] and a GOTO popup window will be shown.
3. Move the ShuttlePoint knob to highlight **CURSOR** and press **[ENT]**.

4. The GPS Chart Plotter is now navigating from your current position to the location selected at step 1. A bearing line between the vessels location and the destination point is shown. A popup window shows the Distance (DST) and Bearing (BRG) from the vessels location to the destination point. Soft Keys are also shown that allow you to quickly switch to the Highway page, to Route Check or to stop navigation.

5. Moving the ShuttlePoint knob, the popup window disappears.

6. The GPS Chart Plotter is in Cursor Mode, to switch to Home Mode press **[CLR]** so the vessel will stay in the center of the page.

7. To stop navigation, press **[GOTO]** and a Warning window is shown. Move the ShuttlePoint knob to highlight **STOP** and press **[ENT]**.
7.4.1  **Goto Route**

When a Route is shown on the Chart page, move the cursor over the designed Waypoint and press [GOTO]. For more information about Routes refer to Chapter 9.

7.4.2  **Goto Mark**

1. Move the ShuttlePoint knob to an open position (no buoy, warning etc. under the cursor) on the Chart page.
2. Press [GOTO] to show the GOTO popup window.
3. Move the ShuttlePoint knob to highlight **MARK** and press [ENT] to show the Marks/Waypoints List.
4. Move the ShuttlePoint Knob to the highlight the desired Mark or Waypoint and press [GOTO].
5. You will notice a circle is drawn around the Icon Symbol. This means the GPS Chart Plotter is now navigating to the point.
6. Press [CLR] to switch to the Chart page or Highway page to start navigating to the point.

7.4.3  **Stop Navigation to Destination**

When the last navigation point is reached (last point of navigated route or single navigation point), navigation stops. You can decide whether the navigation is automatically stopped or if the user confirmation is required (see Par. 13.1).

If confirmation is required, when the Destination is reached a WARNING window is shown. Move the ShuttlePoint knob to highlight **YES** and press [ENT] to stop the navigation:

![Warning Window](image)

Figure 7.4.3 - Warning window
8. MAN OVER BOARD (MOB) FUNCTION

During navigation, the “MOB” feature provides a one-touch method of storing a location, such as a point where a crew member fell overboard. In this mode, the CP390i places a MOB point on the Chart page and all the navigation data shown is related to navigating back to this point, allowing you to retrace your path to the MOB point efficiently.

8.0 PLACING A MOB POINT

1. On the Chart page, press [MOB] to start navigating back to the point.
2. You will notice a MOB Mark will be on the Chart page and all navigation is referring back to this point.

![Figure 8.0 - MOB point](image1)

3. If the cursor is moved over the MOB icon, the popup windows over Soft Keys will be shown allowing quick access to the Highway or Navigation page, or to Route Check.
4. To stop navigation to the MOB point, press [GOTO], select [STOP] and press [ENT].

8.1 DELETING A MOB POINT

1. Move the ShuttlePoint knob until the cursor is over the top of the MOB icon.
2. Press [DELETE], a popup window will be shown to confirm deleting the MOB point.

![Figure 8.1 - Deleting MOB point](image2)

3. Move the ShuttlePoint knob to highlight [YES] and press [ENT].
9. ROUTES

The CP390i have the capability to store 50 Routes with 100 Waypoints or Marks in each Route. A Route can consist of Waypoints or Marks. The difference is when a Route is made using Waypoints and the Route is deleted the Waypoints are also deleted. However if a Route is made of Marks and the Route is deleted the Marks stay in memory.

![Diagram of GPS Chart Plotter with Waypoints and Marks]

**Figure 9 - Example to show how the GPS Chart Plotter switches from one Waypoint to another**

### 9.0 CREATING A ROUTE USING WAYPOINTS

1. On the Chart page move the ShuttlePoint knob to the Lat/Lon of the starting Waypoint in the Route.
2. Press [ROUTE], you will notice the starting Waypoint  will be placed under the cursor.
3. Move the ShuttlePoint knob to the second Lat/Lon of the next leg  in the Route.
4. Press [ROUTE]. You will notice another Waypoint is shown under the cursor and a line joins the starting Waypoint to the second Waypoint.

![Diagram of Route creation with Waypoints]

**Figure 9.0 - Creating a Route using Waypoints**

5. Repeat steps 3 and 4 until all Waypoints are entered into the Route.

**NOTE**

At this point the Route is saved as ROUTE01. If you would like to save the Route under a specific name follow the next steps.
9.1 CHANGING THE NAME OF A ROUTE

To name the Route:
1. Press [MENU], move the ShuttlePoint knob to highlight USER POINTS and press [ENT].
2. Move the ShuttlePoint knob to highlight ROUTE and press [ENT].
3. Move the ShuttlePoint knob to highlight EDIT and press [ENT] or move the ShuttlePoint knob to the right.
4. Move the ShuttlePoint knob to highlight NAME and press [ENT]. A popup window will be shown.
5. Move the ShuttlePoint knob up/down to change the characters and left/right to select a different character in the Routes Name.

7. Press [CLR] to show the Chart page.

9.2 CREATING AN OLYMPIC ROUTE

This feature allows the starting point in a Route to be saved as the final destination point.
1. On the Chart page move the ShuttlePoint knob to the Lat/Lon of the starting Waypoint in the Route.
2. Press [ROUTE], the starting Waypoint will be placed under the cursor.
3. Move the ShuttlePoint knob to the second Lat/Lon of the next leg in the Route.
4. Press [ROUTE]. Another Waypoint is shown under the cursor and a line joins the starting Waypoint to the second Waypoint.
5. Repeat steps 3 and 4 until all Waypoints are entered into the Route.
6. Then move the ShuttlePoint knob to the last Waypoint.

7. Press [OLYMPIC]. A line joins the starting Waypoint and the last Waypoint.
9.3 MAKING ADDITIONAL ROUTES

To create another Route the GPS Chart Plotter must be told that you want to create a second Route.
1. Press [MENU], move the ShuttlePoint knob to highlight USER POINTS and press [ENT].
2. Move the ShuttlePoint knob to highlight ROUTE and press [ENT].
3. Move the ShuttlePoint knob to highlight SELECT and press [ENT] or move the ShuttlePoint knob to the right.
4. Move the ShuttlePoint knob to an open Route number example Route 2.
5. Press [ENT] or move the ShuttlePoint knob to the right.
6. Press [CLR] or move the ShuttlePoint knob to the left until the Chart page is shown.
7. To create the new Route, follow the steps in Creating a Route using Waypoints or Marks sections.

9.4 CREATING A ROUTE USING MARKS ON THE CHART PAGE

To create a Route containing Marks you first must create the Marks and show them on the Chart page.
1. Move the ShuttlePoint knob over the top of a Mark that you wish to be the starting point in the Route and press [ROUTE].
2. Next move the ShuttlePoint knob until the cursor is over the Mark that you want to be the next leg in the Route.
3. Press [ROUTE]. You will notice a bearing line joins the first and second Mark which means these Marks are selected into the Route.
4. Repeat steps 3 and 4 until all Marks are entered into the Route.

**NOTE**

At this point the Route is saved as ROUTE01. If you would like to save the Route under a specific name follow the remaining steps.

5. To name the Route press [MENU]. Move the ShuttlePoint knob to highlight USER POINTS and press [ENT].
6. Move the ShuttlePoint knob to highlight ROUTE and press [ENT].
7. Move the ShuttlePoint to highlight EDIT ROUTE and press [ENT] or move the ShuttlePoint knob to the right.
8. Move the ShuttlePoint knob to highlight NAME and press [ENT] or move the ShuttlePoint knob to the right. A popup window will be shown.
9. Move the ShuttlePoint knob up/down to change the characters and left/right to select a different character in the Routes Name.
11. Press [CLR] to show the Chart page is shown.

### 9.5 INSERTING A WAYPOINT INTO A ROUTE

Place the cursor on the navigation line between two Waypoints and press [INSERT]. The line between the two Waypoints is turned into a dotted line, see the following picture.

![Figure 9.5 - Inserting Waypoint procedure (1)](image)

Move the ShuttlePoint knob to the desired location for the new Waypoint: the line will “rubber-band”, drawing a dotted line between the previous Waypoint and the cursor, and another dotted line between the cursor and the next Waypoint (see the left side of the above picture). Once you have positioned the cursor at the location you want, press [ENT] (see the right side of the above picture).

![Figure 9.5a - Inserting Waypoint procedure (2)](image)

### 9.6 GOTO A ROUTE

By having created some Routes, you can choose one of them to place a GOTO on.

#### 9.6.0 Using [GOTO] to Select Route

1. Move the ShuttlePoint knob to an open position (no buoy, warning etc. under the cursor) on the Chart page.
2. Press [GOTO] to show the GOTO popup window.
3. Move the ShuttlePoint knob to highlight ROUTE and press [ENT].
4. The SELECT ROUTE popup window will be shown.
5. Move the ShuttlePoint knob to the highlight the desired Route and press [ENT].
6. On the Chart page a circle with a flag is shown on the first leg of the Route and a navigation line is shown, indicating the GPS Chart Plotter is navigating to the first Waypoint in the Route.

9.6.1 Using the ShuttlePoint knob

1. On the Chart page move the ShuttlePoint knob until the cursor reaches the starting point of the Route.
2. Press [GOTO] to start following the Route.

9.7 DELETING A ROUTE

To delete a Route follow the procedure below:

1. Press [MENU], move the ShuttlePoint knob to highlight USER POINTS and press [ENT].
2. Move the ShuttlePoint knob to highlight ROUTE and press [ENT].
3. Move the ShuttlePoint knob to highlight DELETE and press [ENT] or move the ShuttlePoint knob to the right.
4. A Warning message appears to confirm. Move the ShuttlePoint knob to highlight YES and press [ENT]. The Route has been deleted.

WARNING

An active Route (one that you are navigating to) cannot be deleted until you stop navigating to the Route.
9.8 OTHER SETTINGS IN ROUTE MENU

You will notice the ROUTE menu has other selections.

- **SELECT**
  - Chooses an available Route to create or chooses a stored Route to show and follow on the Chart page.

- **REVERSE**
  - Reverses the Route, when chosen starting point is at the end of the Route.

- **COLOR**
  - Allows changing the color of the navigation lines between each leg in the Route.

- **EDIT**
  - The Edit Route (Route Report) menu is useful to show details of the Waypoints contained within the Route. This menu also allows you to enter in your average speed and fuel consumption and calculate the approximate fuel used when following the Route.

- **SEND**
  - Sends the stored points to an external device (PC) capable of listening to NMEA RTE sentence.

- **RECEIVE**
  - Receives the points from an external device (PC) capable of sending NMEA RTE sentence.

- **THICKNESS**
  - Allows the Route line to be easily seen; default selection is Thick.

9.8.0 Route Check

The Route Check function is used after you have created a Route to ensure you and your vessel will not have problems while navigating. This is done by the CP390i by reviewing the Route and looking for the following hazards that may effect safe navigation:

- Land Areas
- Shallow Water
- Intertidal Areas *(areas emerged at low tide)*
- Rocks
- Wrecks
- Obstructions
- Shoreline Constructions
- Fishing Facility
- Dredged Areas
- Diffusers *(submarine pipeline)*
- Mooring/Warping Facility
- Production Installation *(an installation for the exploitation of natural resources)*
- Pingos *(small conical hills having a large central core of ice formed from the encroachment of permafrost and the resulting hydrostatic pressure)*
- No Data Available *(no adequate data coverage)*

If any of these alarm conditions is detected, the function returns the list of dangerous objects and the relative dangerous Route leg, that is drawn with a different color.

- Route legs which were classified as dangerous are displayed in RED. It means that there is at least one dangerous object in the vicinity of this leg and it has been found.
- Route legs which were classified as safe are displayed in GREEN. It means that the data was checked on detailed chart levels and no problems were found for all segments of the leg.
- Route legs for which there was not sufficient data to be checked are displayed in YELLOW. It means that no problems were found but the data was not sufficient or not available at all to classify such a leg as safe.
To activate this function:

**AUTOMATIC CHECK**
Turns the Route Check feature On or Off. Turn the Automatic Route Check on after you have created a new Route, or if you inserted a new Waypoint, deleted, moved or edited any Waypoint in a saved Route to confirm the Route can be safely navigated.

**ROUTE WIDTH**
Allows you to select the width from the left and right of the Route leg where the GPS Chart Plotter will check to confirm navigation threats. See the picture below. The default for this selection is 0.04Nm.

**DEPTH LIMIT**
Allows you to select the water depth in the Route width area so the GPS Chart Plotter can check and confirm underwater threats. It checks if some objects with the depth attribute (like Shallow Water, Dredged Areas, Diffusers, Obstructions, Pingo, Production Installation and Wrecks) are above this depth level. Only if the depth attribute is above the depth limit are they found and considered as dangerous. See the picture below. The default setting is 10ft.

**ACCURACY**
Defines a segment length into which a leg of the Route is divided in order to execute the search for dangerous objects with better accuracy. When accuracy is maximal, a segment length is the shortest. When accuracy is minimal, a segment length is the longest. Selects among Minimum, Low, Medium, High and Maximum. See the picture below. The default setting is Medium.

**ROUTE CHECK REPORT**
Shows the list of the dangerous objects found on the charts crossed by the Route.

**NOTE**
Although the functionality is called Route Check, it can also be activated when the navigation is set to a single point (like DSC, MOB, Mark). In the case of checking a single point towards which the navigation is started, the leg for which the Route Check is executed is defined by the current position (the leg’s starting point) and the destination point (the leg’s ending point).
10. TRACKS

The CP390i have the capability to store 20 individual Tracks and record up to 10000 Track Points. Before using the Track function you will need to setup the Track function that suits your boat. The Track function records your tracks your vessel's location as it moves through the water. The Track function can be setup to lay down a Track for a predetermined time or distance interval. If you have a fast moving boat you may want to setup the CP390i to record a Track point every 0.5Nm or if you have a sail boat you may want to setup to lay down a Track point once every 1 minute.

NOTE
Please note the Track point memory capacity is 10,000 points. This means for a long journey you may have to adjust the time or distance to be able to track your journey. It should be noted when the 10,000 Track points are used up, the first Track point layed down will be deleted when a new point is placed on the chart.

1. Press [MENU], move the ShuttlePoint knob to highlight USER POINTS and press [ENT].
2. Move the ShuttlePoint knob to highlight TRACK and press [ENT].
3. Move the ShuttlePoint knob to highlight STEP UNIT and press [ENT] or move the ShuttlePoint knob to the right.
4. Move the ShuttlePoint knob to highlight Dist or Time and press [ENT] or move the ShuttlePoint knob to the right.

5. Move the ShuttlePoint knob up/down to the desired step value and press [ENT] or move the ShuttlePoint knob to the right.
6. Press [CLR] or move the ShuttlePoint knob to the left until the Chart page is shown.

10.0 TRACKING

When using the Tracking feature you will notice every time a Track Point is layed down on the Chart page a small filled in circle is shown on the Track line. If you move the cursor over the top of the circle a popup window will be shown with the Time, Water Temperature, Speed and Course Over Ground (COG). This is very useful if you are fishing and want to review the conditions where the fish were being caught.
10.0.0 Saving and Starting a New Track

A Track is automatically saved and retained in memory when the power is turned off. To start a new Track:
1. Press [MENU], move the ShuttlePoint knob to highlight USER POINTS and press [ENT].
2. Move the ShuttlePoint knob to highlight TRACK and press [ENT].
3. Move the ShuttlePoint knob to highlight ACTIVE TRACK and press [ENT] or move the ShuttlePoint knob to the right.
4. Move the ShuttlePoint knob up/down to select the next available open Track and press [ENT] or move the ShuttlePoint knob to the right.
5. Move the ShuttlePoint knob to highlight TRACKING and press [ENT] or move the ShuttlePoint knob to the right to set On.
6. Press [CLR] or move the ShuttlePoint knob to the left until the Chart page is shown.
7. A new Track now will be laid down.

10.0.1 Deleting a Track

To delete a Track:
1. Press [MENU], move the ShuttlePoint knob to highlight USER POINTS and press [ENT].
2. Move the ShuttlePoint knob to highlight TRACK and press [ENT].
3. Move the ShuttlePoint knob to highlight DELETE and press [ENT] or move the ShuttlePoint knob to the right.
4. A warning popup window will be shown to confirm if you want to reset the Track. Move the ShuttlePoint knob to highlight YES and press [ENT] or move the ShuttlePoint knob to the right. The Track is now deleted.
5. Press [CLR] or move the ShuttlePoint knob to the left until the Chart page is shown.

10.0.2 Other Settings

You will notice the Track Menu has other selections:

<table>
<thead>
<tr>
<th>Selection</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>TRACKING</td>
<td>Allows turning on or off the tracking function</td>
</tr>
<tr>
<td>ACTIVE TRACK</td>
<td>Allows saving a Track to one of the 20 Tracks available</td>
</tr>
<tr>
<td>VISIBLE</td>
<td>Shows or hides a Track shown in ACTIVE TRACK menu</td>
</tr>
<tr>
<td>LINE COLOR</td>
<td>Selects the color of the Track line</td>
</tr>
<tr>
<td>DELETE</td>
<td>Deletes a Track selected in the ACTIVE TRACK menu</td>
</tr>
<tr>
<td>STEP UNIT</td>
<td>Allowable selection are Distance or Time</td>
</tr>
</tbody>
</table>
DISTANCE
User adjustable Distance interval of when Track point is laid down on the Chart page.

TIME
User adjustable Time interval of when Track point is laid down on the Chart page.

10.1 TRIP LOG

10.1.0 Using the Trip Log

On the Chart, Navigation, Highway and NMEA Data pages the windows may be customized to show Trip Log information.

1. Select one of the pages listed above, press and hold [MENU]. You will notice one of the data boxes will be highlighted.
2. Press [ENT] and move the ShuttlePoint knob to highlight TLOG, press [ENT] or move the ShuttlePoint knob to the right.
3. A popup window will be shown with Nm (Nautical Mile), Sm (Statute Mile), Km (Kilometer), Nm+Mt, Nm+Ft and RESET. Move the ShuttlePoint knob to select the desired units of measure and press [ENT] or move the ShuttlePoint knob to the right.
4. Press [CLR] or move the ShuttlePoint knob to the right until the selected page (Chart, Navigation, Highway or NMEA Data Page) is shown.

10.1.1 Setup / Reset

When Trip Log is selected in one of the data windows and you want to reset the log:

1. Press and hold [MENU] until a field is highlighted (it will be shown in a yellow frame).
2. Move the ShuttlePoint knob to highlight the Trip Log window TLOG and press [ENT].
3. A popup window will be shown. Move the ShuttlePoint knob to TLOG and press [ENT].
4. Another popup window will be shown. Move the ShuttlePoint knob to RESET and press [ENT].
5. A warning popup window will be shown to confirm if you want to reset the Trip Log. Move the ShuttlePoint knob to highlight YES and press [ENT]. The Trip Log is now reset.
6. Press [CLR] to store and exit the editing mode.

Figure 10.1. 1 - Trip Log Reset
11. USER C-CARD

The optional User C-CARD is used to backup Marks, Routes, and Tracks stored in your GPS Chart Plotter’s memory. In the USA the User C-CARD is available directly from Jeppesen Marine at 800/424-2627. The User C-CARD is similar to a backup disk used with a PC, in case you have to clear the RAM to resolve an issue or load new software, or if you would like to transfer Waypoint, Track and Route information from one STANDARD HORIZON GPS Chart Plotter to another.

11.0 USER C-CARD MENU

This optional card is similar to using a floppy disk or memory stick on a PC to backup your files or to transfer the information that you have stored to a friend’s GPS Chart Plotter. The information shown below will assist you to transfer the User Points, Routes and Track history to the optional User C-CARD.

11.0.0 Formatting the Optional User C-CARD

1. Press [MENU], move the ShuttlePoint knob to highlight USER POINTS and press [ENT].
2. Move the ShuttlePoint knob to highlight USER C-CARD and press [ENT].
3. Move the ShuttlePoint knob to highlight FORMAT and press [ENT].
4. A popup Warning window will to confirm you want to format the User C-CARD.
5. Select YES and press [ENT] to confirm (select NO otherwise). The format of User C-CARD must be done before using a new User C-CARD: this operation prepares the User C-CARD to receive and store information.

   NOTE
   Formatting permanently erases all files previously saved on the User C-CARD.

11.0.1 Transferring Files to the Optional User C-CARD

1. Remove a C-MAP BY JEPPESEN NT+/MAX C-CARD if present and insert the optional User C-CARD into the slot.
2. Press [MENU], move the ShuttlePoint knob to highlight USER POINTS and press [ENT].
3. Move the ShuttlePoint knob to highlight USER C-CARD and press [ENT].
4. A screen will appear. Move the ShuttlePoint knob to the left to highlight SAVE and press [ENT].
5. A popup SAVE FILE window will appear. In this window you can change the name and the file type by using the ShuttlePoint knob and pressing [ENT], when finished press [CLR] once.
6. To save the file, move the ShuttlePoint knob to SAVE in window and press [ENT].
7. A Information popup window will momentarily be shown “SAVING” then show “SAVING OK”.

11.0.2 Loading a File from the Optional User C-CARD

If you have a problem and accidentally lose the User Points in the GPS Chart Plotter with the optional User C-CARD it is possible to load the data back into the GPS Chart Plotter using the following procedure:
1. Press [MENU], move the ShuttlePoint knob to highlight USER POINTS and press [ENT].
2. Move the ShuttlePoint knob to highlight USER C-CARD and press [ENT].
3. Select the saved file from the User C-CARD list by using the ShuttlePoint knob and press [ENT].
4. Move the ShuttlePoint knob to the left to highlight LOAD and press [ENT].
5. A popup information window will appear when loading is complete.

11.0.3 Deleting a File from the Optional User C-CARD

You may want to delete a saved file on the User C-CARD.
1. Press [MENU], move the ShuttlePoint knob to highlight USER POINTS and press [ENT].
2. Move the ShuttlePoint knob to highlight USER C-CARD and press [ENT].
3. Select the saved file from the User C-CARD list by using the ShuttlePoint knob and press [ENT].
4. Move the ShuttlePoint knob to the left to highlight DELETE and press [ENT].
5. A popup Warning window will to confirm you want to delete the file.

11.0.4 Refreshing the Optional User C-CARD

You may want to change the User C-CARD inserted in the slot with a new one.
1. Press [MENU], move the ShuttlePoint knob to highlight USER POINTS and press [ENT].
2. Move the ShuttlePoint knob to highlight USER C-CARD and press [ENT].
3. Open the door, remove the User C-CARD from the slot and insert another User C-CARD into the same slot.
4. Move the ShuttlePoint knob to highlight REFRESH and press [ENT]. This "new" User C-CARD is now ready to receive and store information.
12. PAGES

The CP390i has many pages that are designed to ease your navigation.

![Example of screen display pages](image)

The pages can be selected in the following way:

**Selection by MENU**

1. Press [MENU]. The following menu is shown on the screen:

![Main Menu](image)

2. Move the ShuttlePoint knob to highlight the desired page and press [ENT].
Selection by SOFT KEY
Press one of the Soft Keys under the display, then press the Soft Key to show the desired page.

12.0 CHART PAGE
The Chart page is the main page of the GPS Chart Plotter. From this page the user can zoom in/out, pan around the chart, show information about cartographic objects, see the exact vessel position with the COG and SOG, place points, GOTO a destination point, show Track history etc.

It is possible to set the chart as a single or two charts side by side.

1. Press [MENU], move the ShuttlePoint knob to highlight CHART and press [ENT]. Two Chart page types are available: Single and Dual.
2. Move the ShuttlePoint knob to highlight Single or Dual and press [ENT].

NOTE
may appear on the unused window of the Dual Chart page. It happens when the GPS Chart Plotter updates the displayed chart in the not active window. So the user understands that the GPS Chart Plotter is busy.

12.0.0 Focus Soft Key on Dual Chart Page
When Dual Chart is selected, you will notice one of the chart windows will have a red border around it. This red border indicates which chart window the GPS Chart Plotter has the focus on, meaning if the ShuttlePoint knob is moved the cursor on chart window will move.
The focus may be changed to the other chart window with the procedure below:

![Example of Dual Chart page with [Focus] shown](image1)

2. Press [Focus]. A popup window appears where the active focus window label is highlighted.

![Example of Dual Chart page with focus window shown](image2)

3. Move the ShuttlePoint knob up and down to highlight the desired item and press [ENT]. The red border is moved to the focused window.

**NOTE**

It is possible to change the focus by pressing and holding [FIND] for 2 seconds (in place of 1 and 2 steps in the above procedure).

### 12.0.1 Single Chart Page

1. Time
2. Speed Over Ground
3. Course Over Ground
4. Fix status
5. Time To Go (If plotter is not navigating to a point TTG will show "---")
6. Distance from Fix to Destination (If plotter is not navigating to a point DST will show "---")
7. Bearing from Fix to Destination (If plotter is not navigating to a point BRG will show "---")
8. Chart Scale
9. Cursor Coordinates
10. Distance & Bearings from Fix to Cursor

![Example of Single Chart page](image3)
12.0.2 Window Selections

The CP390i windows, displayed on Chart page, may be changed in the following way. The default is the 2 lines small window.

1. To change, press [MENU], move the ShuttlePoint knob to highlight SETUP MENU and press [ENT].
2. Move the ShuttlePoint knob to highlight GENERAL SETUP and press [ENT] or move the ShuttlePoint knob to the right.
3. Move the ShuttlePoint knob to highlight WINDOWS SETUP and press [ENT] or move the ShuttlePoint knob to the right.
4. Move the ShuttlePoint knob to highlight CHART PAGE and press [ENT] or move the ShuttlePoint knob to the right.
5. Select the desired window, HIGHWAY or COMPASS, and press [ENT] or move the ShuttlePoint knob to the right.
6. Press [CLR] or move the ShuttlePoint knob to exit the menu and show the Chart page.

12.0.3 Customizing Data Windows

The data fields contained on the General, 1 Line Small/Large and 2 Line Small data windows can be changed to the following selections:

- SOG = Speed Over Ground
- MAX SPEED = Max Speed
- COG = Course Over Ground
- DST = Distance to Destination\(^1\)
- BRG = Bearing to Destination\(^1\)
- XTE = Cross Track Error
- TTG = Time To Go
- STR = Steering Angle
- HDG = Heading from Electronic Compass

\(^1\) Can only be set in Highway or Compass window.
* DPT = Depth  
* SPD = Speed Through Water  
* ALT = Altitude  
* AWS = Apparent Wind Speed  
* AWD = Apparent Wind Direction  
* TWS = True Wind Speed  
* TWD = True Wind Direction  
* HDOP = Horizontal Dilution of Precision  
* VDOP = Vertical Dilution of Precision  
* TEMP = Water Temperature  
* TLOG = Trip Log  
* DATE = Current Date  
* TIME = Current Time  
* VMG = Velocity Made Good  
* ETA = Estimated Time of Arrival  
* TRACKING = Available free Track point  
* SCALE = Chart Scale  
* GPS STATUS = Shows GPS fix status (WAAS, 3D, 2D, ...)  

**NOTE 1**

When the GENERAL window is selected and the CP590 is in Home Mode, the BRG will show --, unless the GPS Chart Plotter is navigating to a point. When in Cursor Mode, the BRG shows the Bearing from the ship’s position to the cursor location.

**NOTE 2**

See Par. 10.1.0 if Trip Log is selected in one of the Data Windows and you want to reset the log.

**NOTE 3**

Chart Scale is always displayed in General chart window.

**NOTE 4**

GPS Status is always displayed in General and 1 line large chart windows.

To select the desired field, follow the procedure:
1. Press and hold [MENU] until a field is highlighted (it will be shown in a yellow frame).
2. Move the ShuttlePoint knob to the desired data field (the yellow frame is moved to the desired data field) and press [ENT]. The popup window will be shown.
3. Move the ShuttlePoint knob up/down or left/right to choose the desired setting and press [ENT].
4. Press [CLR] to store and exit the editing mode.

Figure 12.0.3 - Customizing the Data Windows
### 12.0.4 Additional Functions on Chart Page: Information on Objects

When on the Chart page, you will notice icons of Buoys, Towers, Lights, Wrecks, Tide Stations, Ports icons, etc.. If the cursor is moved over the top of these icons a popup window will be shown with information about the icon (this is possible only if the Auto Info function is enabled). The GPS Chart Plotter allows you to see information **on all** cartographic objects shown on the screen, or only **on points** or to turn this function off (in this case no popup window is shown when the cursor is placed on a cartographic object). The default setting is On Points.

**Auto Info OFF**

**Auto Info ON POINTS**

**Auto Info ON ALL**

![Figure 12.0.4 - Example of Auto Info settings](image)

To select the information displayed on objects follow the procedure:

1. Press [MENU], move the ShuttlePoint knob to highlight **SETUP MENU** and press [ENT].
2. Move the ShuttlePoint knob to highlight **GENERAL SETUP** and press [ENT].
3. Move the ShuttlePoint knob to highlight **AUTO INFO** and press [ENT].
4. Move the ShuttlePoint knob up or down to highlight **OFF, ON POINTS** or **ON ALL** and press [ENT] or move the ShuttlePoint knob to the right.
5. Press [CLR] or move the ShuttlePoint knob to the left until the menu disappears.

### 12.0.5 Display Mode

Selects from a pre-defined table what cartographic objects are displayed and which display options are set. Pre-programmed settings are user selectable from Full, Medium, Low, Radar (reduces the information on the display to simulate items that would be shown on a Radar display. Please note this function is not actually showing Radar information it is only showing what typically would be shown by a separate dedicated Radar display), Tides, Custom (default mode). To change to one of the pre-programmed settings:

1. Press [MENU], move the ShuttlePoint knob to highlight **SETUP MENU** and press [ENT].
2. Move the ShuttlePoint knob to highlight **CHART CONFIGURATIONS** and press [ENT] or move the ShuttlePoint knob to the right.
3. Move the ShuttlePoint knob to highlight **DISPLAY MODE** and press [ENT] or move the ShuttlePoint knob to the right.
4. Move the ShuttlePoint knob up or down to select the preset and press [ENT].
5. Press [CLR] or move the ShuttlePoint knob to the right until the Chart page is shown.

![Display Mode settings](image)

12.0.6 Marine Settings

Controls the display on the chart of the marine features.

**Place Names**: Turns the local area names On or Off.

**Name Tags**: Turns a tag for particular chart objects that either includes the Name of the chart object or the Depth of an Underwater chart object On or Off.

**Nav Aids & Light Sectors**: Turns the presentation of Lights, Signals, Buoys and Beacons On (Nav-Aids & Light Sectors are shown), Off (Nav-Aids & Light Sectors are not shown) or No Sector (Nav-Aids are shown, Light Sectors are hidden).

**Attention Areas**: Turns the Attention Areas (areas in which special attention by the mariner is required because of natural or man-made hazards sailing regulations and restrictions) On or Off.

**Tides & Currents**: Turns the Tides and Currents On or Off.

When data/time is available, Tidal stream arrows are shown on the charts, indicating the direction and strength of the Tide. If no data/time is available from the GPS or the GPS Chart Plotter is not in Simulation mode, the icon on the chart is generic one. The color of the arrow denotes the strength of the current as follows:
When the GPS Chart Plotter receives a valid position fix, the Tide icons are shown on the charts on the basis of the current date and time: the screen displays and changes arrows as date/time changes.

<table>

Figure 12.0.8 - Example of Roads and Points Of Interest
12.0.9 Chart Settings

Settings that control how the chart features will be shown on the Chart page of the GPS Chart Plotter.

**Lat/Lon Grid**: Turns the Latitude and Longitude grid lines On or Off on the Chart page. See the figure below:

![Lat/Lon Grid ON](image)

![Lat/Lon Grid OFF](image)

**Chart Boundaries**: Turns the Chart Boundaries On, Off or Auto. The Chart Boundaries are the “ticked” boxes surrounding the coastline. Each box indicates an area where more details is available. The Chart Boundaries are only show when a C-MAP BY JEPPESEN NT+/MAX C-CARD is inserted into the GPS Chart Plotter. See the pictures below:

![Chart Boundaries ON](image)

![Chart Boundaries OFF](image)

**Value Added Data**: Turns the Value Added Data On or Off. The Value Added Data (VAD) is a collection of additional cartographic objects which are not present on the original paper chart (from which the electronic chart derives). These objects have been obtained from other sources and then merged to the electronic charts in order to provide more information useful for the navigation. VAD object can be any cartographic objects and it can be distinguished from the official-chart-objects from the Quick Info. A dedicated icon is shown on the Quick Info window to indicate that the object queried is a VAD. The same icon is also shown on the Full Info page and in addition the extended text Value Added Data is shown on the details of the VAD object. See the figure below:

![Value Added Data](image)

**Chart Lock (*)**: Turns the chart function On/Off. When Chart Lock is On, the available zoom scales are only the ones containing cartographic data. Instead when Chart Lock is Off, it is possible to zoom down into zoom scales not covered by cartographic data after the last available zoom scale covered by cartographic data. The DSI (Data Safety Indicator) window, if present, will show “NO CHART”, when an empty level is entered in the location of chart expansion mode.

**Mixing Levels**: When the chart coverage at the current chart scale does not fill the entire display, the GPS Chart Plotter draws the rest of the chart using charts from above and below the current scale. When this function is turned on you will notice the display may redraw 2 to 3 times to show all the details.

**NOTE**

When an empty level is entered, the message “No cartographic coverage” is shown on a window.
in a corner of the chart display. The warning message is always displayed as long as the current zoom has no data coverage.

12.0.10 **Underwater Objects Settings**

The following selections are used to control which Underwater Objects are shown on the Chart page.

**Underwater Object Limit**
- Selects the max depth value to display Underwater Objects. If value is set to 0ft, the Underwater Objects are not shown on the charts. Menu options are grayed out. If value is more than 0ft (i.e. 10ft), in the Range from 0ft to the selected value the Underwater Objects are displayed according to their setting below.

<table>
<thead>
<tr>
<th>Underwater Object Limit</th>
<th>Rocks</th>
<th>Obstructions</th>
<th>Diffusers</th>
<th>Wrecks</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Sets Off/Icon/Icon+Depth* the displaying of the Rocks.</td>
<td>Sets Off/Icon/Icon+Depth* the displaying of the Obstructions.</td>
<td>Sets Off/Icon/Icon+Depth* the displaying of Diffusers (Diffuser is a structure on an outfall through which liquids are discharged. The structure will usually project above the level of the outfall and can be an obstruction to navigation).</td>
<td>Sets Off/Icon/Icon+Depth* the displaying of Wrecks.</td>
</tr>
</tbody>
</table>

**NOTE**

Choose the options: OFF (the object is not visible independently of the selected “Underwater Object Depth Value”); ICON (the object icon is visible without tags, in the range selected from “Underwater Object Depth Value” option); ICON+DEPTH (the object icon and tag is visible, in the range selected from “Underwater Object Depth Value” option).

12.1 **CUSTOMIZING CHART SETTINGS**

The GPS Chart Plotter also allows you to customize items shown on the chart (discussed in above sections) instead of using a pre-defined table discussed in Par. 12.0.5 “Display Mode”.

1. Press [MENU], move the ShuttlePoint knob to highlight SETUP MENU and press [ENT].
2. Move the ShuttlePoint knob to highlight CHART CONFIGURATIONS and press [ENT] or move the ShuttlePoint knob to the right.
3. Move the ShuttlePoint knob to highlight DISPLAY MODE and press [ENT] or move the ShuttlePoint knob to the right.
4. Move the ShuttlePoint knob to highlight Custom and press [ENT] or move the ShuttlePoint knob to the right.
5. Move the ShuttlePoint knob up or down to select the desired item within the groups Marine Settings, Depth Settings, Land Settings, Chart Settings or Underwater Settings and press [ENT]. See the above sections for details on selections.

12.2 **NAVIGATION PAGE**

The Navigation page is useful to show information when heading to a destination, following a compass heading or navigating to a Mark or a Route. The default page is shown with a Compass Rose, however this can be customized to show a Compass Tape.

1. To change to show the Compass Tape, select the Chart page, press [MENU]. Move the ShuttlePoint knob to highlight SETUP MENU and press [ENT].
2. Move the ShuttlePoint knob to highlight GENERAL SETUP and press [ENT] or move the ShuttlePoint knob to the right.
3. Move the ShuttlePoint knob to highlight **WINDOW SETUP** and press [ENT] and press [ENT] or move the ShuttlePoint knob to the right.

4. Move the ShuttlePoint knob to highlight **NAVIGATION PAGE** and press [ENT] and press [ENT] or move the ShuttlePoint knob to the right.

5. Move the ShuttlePoint up or down to select **COMPASS TAPE** and press [ENT].

6. Press [CLR] or move the ShuttlePoint knob to the right until the menu disappears.

![Figure 12.2 - Navigation page with Compass Rose](image)

8. **Compass Rose**

![Figure 12.2a - Navigation page with Compass Tape](image)

5. **Compass Tape**

**NOTE**

The COG heading is computed and supplied to the plotter from the internal GPS or external GPS.

### 12.3 HIGHWAY PAGE

Shows a 3D view of the vessel travelling through the water when navigating to a destination point, Mark or following a Route. Data boxes on the Highway page can be customized (see 1, 2 and 3 in the following picture), except for the GPS Status. In the bottom left corner there is a small gray window (see 5 in the following picture) which shows the scale (width) of the Highway. The default width is 0.2Nm however this may be changed by pressing [ZOOM IN] or [ZOOM OUT].
12.4 CELESTIAL PAGE

The Celestial page contains Tide information critical for safe navigation. It is also useful for boaters that are concerned about the height of the water under a bridge or by fisherman that wish to know the tide and moon phase of a specific date.

Refer to the following Figure 12.0. It includes information on the moon phase with image, rise and set times 4 and also rise and set times of the sun 5. Moving the ShuttlePoint knob left or right controls the Tide Prediction time 1 (see the vertical line which moves as the ShuttlePoint knob moves) and moving the ShuttlePoint knob up or down controls the draught value 3 (see the horizontal line which moves as the ShuttlePoint knob moves). The height value 6 shows the height of the Tide water during a 24 hours period of time.

None of the data boxes on this page can be customized.

NOTE

The Local Offset matches the Time Offset entered in the Time Setup menu (see Par. 3.2)

To enter the desired date follow the procedure below:
1. Press [ENT] and a popup window will be shown.
2. Moving the ShuttlePoint knob up or down changes the digits and left and right selects the month, day and year.
3. Press [CLR] to exit and view the date shown in 2.
12.5 GPS STATUS PAGE

The GPS Status page is used as a reference to see how well the GPS is receiving satellites. Data boxes can be customized, except for Latitude, Longitude and GPS Status.

1. Ship's Coordinates
2. Date and Time
3. WAAS/GPS Icon
4. Vertical Dilution of Precision
5. Horizontal Dilution of Precision
6. Tracked, but not used, Satellite
7. Used Satellite
8. COG (Course Over Ground)

The WAAS/GPS Icon area 7 may change due to the satellite reception:

**ACQUIRING** : the GPS is trying to receive a valid position fix.
**GPS2D** : the GPS is receiving at least 2 satellites.
**GPS3D** : the GPS is receiving at least 3 satellites.
**WAAS 2D/3D** : the GPS is receiving a 2D or 3D position and the correction from the WAAS satellite.

12.5.0 GPS Setup Menu

From the GPS Status page it is possible to activate the GPS Setup menu.
1. Press [MENU], move the ShuttlePoint knob to enter GPS STATUS page and press [ENT].
2. Press and hold [ENT]. The GPS Setup menu1 appears on the screen. See the following table:

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Restart GPS</strong></td>
<td>Restarts all GPS processes. Once executed, the message &quot;Done&quot; is shown.</td>
</tr>
<tr>
<td><strong>Navigation Speed</strong></td>
<td>Allows setting the Navigation Speed among Low and High. The default setting is High.</td>
</tr>
<tr>
<td><strong>Speed Filter</strong></td>
<td>Allows to resolve erratic speed readings in rough seas. Available values are Off, Low, Medium, High. The default setting is Off.</td>
</tr>
<tr>
<td><strong>Differential Correction Source</strong></td>
<td>Allows setting what kind of Differential Correction will be used by the GPS between WAAS-EGNOS and none. The default setting is WAAS-EGNOS.</td>
</tr>
</tbody>
</table>

3. Move the ShuttlePoint knob to highlight the preferred item and press [ENT].
4. Press [CLR] until the menu disappears or an easier method is to move the ShuttlePoint knob to the left until the menu disappears.
12.5.1 WAAS/EGNOS Setting

From the GPS Status page it is possible to disable the WAAS/EGNOS function.

1. Press [MENU], move the ShuttlePoint knob to enter GPS STATUS page and press [ENT].
2. Press and hold [ENT]. The GPS Setup menu appears on the screen.
3. Move the ShuttlePoint knob to highlight DIFF CORRECTION SOURCE and press [ENT].
4. Move the ShuttlePoint knob to highlight None (to disable) and press [ENT].
5. Press [CLR] until the menu disappears or an easier method is to move the ShuttlePoint knob to the left until the menu disappears.

12.6 NMEA DISPLAY PAGE

The GPS Chart Plotter is capable of displaying information in the customizable data windows from external NMEA-0183 devices. Depth Sounder, Speed Log with Temp, Wind Speed and Direction, Flux Gate Compass, and GPS information can be shown in any of the boxes. The NMEA sentences read from external devices are: BWC, DSC, DSE, GGA, GLL, GSA, GSV, HDG, HDM, HDT, RMC, VHW, VTG, DPT, DBT, MTW, VWR, VWT, TLL, WPL, RTE. To display the desired NMEA Display page follow this procedure:

1. Press [MENU], move the ShuttlePoint knob to highlight NMEA DISPLAY and press [ENT].
2. Move the ShuttlePoint knob to highlight DISPLAY and press [ENT]. The default NMEA Display shows 3 boxes (see the right side of the below picture): this configuration is useful when navigating to a destination and trying to keep the Course Over Ground (COG) and Bearing (BRG) figures the same.

3. Move the ShuttlePoint knob to the left or right to scroll through all NMEA Display pages. There are 5 NMEA Display pages which can be displayed one after the other. They can display from 1 to 6 boxes and each data box can be customized.

NOTE

From the factory the right most Soft Key is programmed for direct access. Press this key two times to show the NMEA Display page.
12.7 NMEA DATA PAGE

The NMEA Data page is very useful to see if an external device (for example a Depth Sounder) is transmitting NMEA sentences to the GPS Chart Plotter. This page can also be used to see if the GPS Chart Plotter NMEA output is being loaded down by an external NMEA device the GPS Chart Plotter is connected to (VHF Radio connected but the Radio is not receiving a GPS Position. Usually the VHF Radio will be connected to the Green and Brown wires). To check and see if the GPS Chart Plotter is transmitting the sentences:

1. Press [MENU], move the ShuttlePoint knob to highlight NMEA DISPLAY and press [ENT].
2. Move the ShuttlePoint knob to highlight DATA and press [ENT].
3. Connect the Blue Wire on the GPS Chart Plotter to the junction of the Brown wire and the VHF wire. The display should look similar to the right side of the figure below:

![NMEA Display Menu](image)

4. To view data from a device connected to another data port, press [ZOOM IN]. The available options appear each time the [ZOOM IN] is pressed: select the desired port.
5. To freeze the data on the display so it is easy to read and understand press [ENT].
6. To unfreeze the data, [ENT] must be pressed again.

12.8 NMEA TREND PAGES

The CP390i* has the following NMEA Trend pages. Trends will be shown for Depth, Temperature and Speed (DST521 or DST526 must be connected to show speed through the water) when a STANDARD HORIZON transducer is connected. To show Wind trend information the CP390i must be connected to the NMEA output of an external Wind instrument.

NOTE*

The CP390i must be connected to the Optional FF525 50/200kHz Black Box Fish Finder.

To select a NMEA Trend page:

1. Press [MENU], move the ShuttlePoint knob to highlight NMEA DISPLAY and press [ENT].
2. Move the ShuttlePoint knob to select **DEPTH TREND, WIND SPEED TREND, TEMP TREND** or **SOG TREND** and press [ENT].

Figure 12.8a - NMEA Trend pages

### 12.9 VHF DIGITAL SELECTIVE CALLING

Digital Selective Calling is a semi-automated method of establishing a VHF Radio call. DSC had also been designated as part of the Global Maritime Distress and Safety System (GMDSS). This system allow mariners to instantly send a distress call with GPS position (when connected to the transceiver) to the Coast Guard or other vessels within range of the transmission. DSC will also allow mariners to initiate Position Request, Position Report Calls to or from another vessel equipped with a DSC transceiver.

Compatible VHF Marine Radios with Digital Selective Calling are able to be interfaced with the GPS Chart Plotter to send GPS data to the VHF as well as display DSC Calls on the GPS Chart Plotter:

1. A vessel that has transmitted a DSC Distress Call
2. A vessel that has transmitted a DSC Position Send Call
3. The position of a vessel that transmitted a DSC Position Request Call

### 12.9.0 Interfacing

To take advantage of these functions the GPS Chart Plotter must be interfaced (wired) to a STANDARD HORIZON or compatible DSC VHF.

For additional information refer to Par. 2.4 “Connections”.

### 12.9.1 Distress Call

STANDARD HORIZON GPS Chart Plotters are able to display the location of a vessel in distress when interfaced to a compatible DSC VHF with NMEA-0183 output and the radio receives a DSC Distress Call. STANDARD HORIZON GPS Chart Plotter also log DSC Distress calls to review at a later date. To select the Distress Call page follow the procedure:
1. Press [MENU] and move the ShuttlePoint knob to highlight USER POINTS and press [ENT].
2. Move the ShuttlePoint knob to highlight DSC Log and press [ENT].

This page allows to:

<table>
<thead>

### 12.9.2 Position Request

STANDARD HORIZON GPS Chart Plotters are able to display the location of a vessel when connected DSC VHF radio and when a Position Request or Report call is received. STANDARD HORIZON GPS Chart Plotter also logs DSC Distress calls to review at a later date. To select the Position Request page follow the procedure:

1. Press [MENU] and move the ShuttlePoint knob to highlight USER POINTS and press [ENT].
2. Move the ShuttlePoint knob to highlight DSC Log and press [ENT].
3. Move the ShuttlePoint knob to the right to select POSITION REQUEST and press [ENT].

### 12.9.3 DSC Directory

GPS Chart Plotters are able to display the DSC Directory. From this page the user can assign the Vessel Name, Contact Name and Phone number to any MMSI (Maritime Mobile
Service Identity) so that, when a DSC Distress Call or Position Request is received, the name of the vessel is displayed in place of the MMSI number (a unique number that is assigned to a DSC radio station for use in emergency situations).

To display the DSC Directory:

1. Press [MENU] and move the ShuttlePoint knob to highlight USER POINTS and press [ENT].
2. Move the ShuttlePoint knob to highlight DSC Directory and press [ENT].

![DSC Directory Table]

This page allows to:

<table>
<thead>
<tr>
<th>EDIT</th>
<th>Allows to change the selected DSC Directory entry. It is possible to change NAME, MMSI, CONTACT and PHONE.</th>
</tr>
</thead>
<tbody>
<tr>
<td>ADD</td>
<td>Adds a new DSC Directory entry.</td>
</tr>
<tr>
<td>DELETE</td>
<td>Deletes the DSC Directory entry.</td>
</tr>
<tr>
<td>DELETE ALL</td>
<td>Deletes all DSC Directory entries.</td>
</tr>
</tbody>
</table>
13. ADVANCED SETTINGS

The Advanced Setup Menu allows customization of many GPS functions, Alarms and NMEA interfacing.

1. Press [MENU], move the ShuttlePoint knob to highlight SETUP MENU and press [ENT].
2. Move the ShuttlePoint knob to highlight ADVANCED SETUP and press [ENT] or move the ShuttlePoint knob to the right.

While in this menu you will see many selections which are described in the next sections.

13.0 INPUT/OUTPUT (NMEA, AIS, RADAR)

13.0.0 Input

The CP390i has 4 Inputs and 5 Outputs connections. These ports may be set up to receive and output the following.

- NMEA-0183 - NMEA devices* set to 4800 Baud (default setting)
- Fish Finder: FF525 50/200kHz Black Box Fish Finder - refer to Fish Finder Owner’s Manual
- C-COM - C-Weather refer to Chapter 15
- AIS 38400 - AIS Receiver, refer to Chapter 14
- MOBILARM - Mobilarm receiver, refer to Chapter 16
- Disabled - allows the port to be disabled.

NOTE*

RS232 not opto-isolated electrical interface

NOTE

When a Port is configured, both the Input and Output have the same setting.
Port 1 is set to Radar, both the Input and Output wires are set to SI-TEX proprietary Radar sentences. This means other devices should not be connected to the Input or Output wires.

13.0.1 Output

The ports may be setup to output NMEA sentences. The table below shows the default setting each port.

<table>
<thead>

### 13.1 NAVIGATE

The Navigate Menu allows customization of the Coordinate System (Loran TD’s), Chart Datum, Chart Orientation Resolution (angle the vessel has to change before the chart is redrawn) and Static Navigation. See the following table:

<table>
<thead>
<tr>
<th>Coordinate System</th>
<th>: Selections are:</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. TD: Time Difference, based on Loran (see the following Par. 13.1.0)</td>
<td></td>
</tr>
<tr>
<td>b. UTM: Universal Transverse Mercator Grid</td>
<td></td>
</tr>
<tr>
<td>c. ddd mm.mmm: Degrees Minutes and Thousands of Minutes</td>
<td></td>
</tr>
<tr>
<td>d. ddd mm.mm: Degrees Minutes and Hundredths of Minutes</td>
<td></td>
</tr>
<tr>
<td>e. ddd mm.ss: Degrees Minutes and Seconds (default)</td>
<td></td>
</tr>
</tbody>
</table>

| Chart Datum | : Allows selection of Chart Datums. The default Datum is WGS84 as C-MAP BY JEPPESEN cartography has been compiled using the WGS84 Datum. A datum is a mathematical model of the Earth which approximates the shape of the Earth, and enables calculations such as position and area to be carried out in a consistent and accurate manner. |

<table>
<thead>
<tr>
<th>Chart Orientation Resolution</th>
<th>: Sets the angle the vessel has to change before the chart is redrawn. The default setting is 30 degrees. Example: if the vessel is heading 000T at a speed of 25 Kts, the display will redraw:</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. In Home Mode the GPS Chart Plotter centers the location of the vessel in the center of the display. To keep the vessel in the center of the display the GPS Chart Plotter will occasionally redraw.</td>
<td></td>
</tr>
<tr>
<td>b. If the vessel changes course greater than 330T or more than 30T the chart will be redrawn.</td>
<td></td>
</tr>
</tbody>
</table>

| Static Navigation | : Sets up a threshold for the speed. When the speed received from the positioning device is under that threshold, the GPS Chart Plotter displays zero. |

<table>
<thead>
<tr>
<th>Stop Navigation on Arrival</th>
<th>: When the Destination is reached, the navigation is automatically stopped. You can decide whether the navigation is automatically stopped or if the user confirmation is required (Auto Confirmation is the default setting):</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. Auto Confirmation: the Destination is removed on arrival without informing the user.</td>
<td></td>
</tr>
<tr>
<td>b. Manual Confirmation: on arrival a window pop-ups to require the user confirmation to remove the Destination.</td>
<td></td>
</tr>
</tbody>
</table>

### 13.1.0 Loran TD

The Loran TD selection allows the GPS Chart Plotter to be set up so the user can enter in Loran TD’s directly into the GPS Chart Plotter. After the TD’s have been entered, and the user changes to ddd mm.sss (Degrees Minutes and Seconds) the TD’s will be converted to Lat/Lon coordinates.

To use the TD Coordinate System the user must setup the Chain and Pair information of the TD’s. If you do not know this information, refer to paper charts that show the Chain and Pair information.
13.2 COMPASS

The GPS Chart Plotter computes compass direction from the constellation of GPS satellites. For the GPS Chart Plotter to compute direction the vessel must be moving through the water unless connected to an optional Flux Gate Compass sensor. The Compass Menu allows the GPS Chart Plotter to customize the following selections:

- **Bearsings**: Selects between True and Magnetic. When Magnetic bearings is enabled, the GPS Chart Plotter applies the selected Magnetic Variation (Auto or Manual, see next paragraph) to compute Magnetic bearing.

- **Variation**: Allows the user to select Auto or Manual. When Auto mode is selected the GPS Chart Plotter computes the offset by the current GPS fixed location. Manual mode allows the user to enter in a Magnetic Variation that is applied in the True conversion.

- **Calibration**: This function allows a user to enter in the offset for areas that the vessel may cruise instead of entering a manual offset for one location. This offset is useful for cruising vessels or vessels that travel internationally often.

![Compass Table](Image)

13.3 ALARMS

The Alarms Menu is used to select and setup audible and visual Alarms. Available alarms are Arrival, XTE, Depth, Anchor and Grounding Alarm.

- **Arrival Alarm**: Alerts when the vessel is approaching a single destination point or when arriving at a leg in a Route. Available selections: 0.00 to 9.99Nm.

- **XTE Alarm**: Alerts when the vessel is deviating from a defined course. Available selections: 0.00 to 9.99Nm.

- **Depth Alarm**: Alerts when the received depth value is lower than the selected value. Available selections: 0000 to 3000ft.

- **Anchor Alarm**: Alerts when the ships moves off a selected locations by a selected distance. Available selections: 0.00 to 9.99Nm.

- **Audible Alarm**: Enables or disables the alarm beep.

- **Grounding Alarm**: Looks ahead of the vessels heading to see if a potential danger exists. When the Grounding Alarm is enabled the GPS Chart Plotter will draw a triangle in front of the vessel on the Chart page showing the area that is being searched as shown below. The depth and range (distance) of the area the GPS Chart Plotter looks ahead for a shallow area can be set using this function.

- **Grounding Alarm Range**: Allows setting the distance of the grounding alarm zone (the length of the sector to be detected) among the 0.25, 0.5, 1.0 Nm selections. When a depth or any of the searched objects is found in the scanned area, a tick marker is printed on the relative box in the Grounding Alarm Report page to identify which dangerous objects have been currently detected.

- **Grounding Alarm Report**: This function allows displaying a report of the dangerous objects currently detected.
NOTES

(1) Please note that the alarm can be activated only if the GPS Chart Plotter is receiving a Fix position or Simulation mode is activated. Otherwise an error beep is returned and the Alarm value is kept to Off.

(2) The Grounding Alarm function is available only if a NT+/MAX C-CARD is inserted. It also affects the screen redraw speed so we suggest to disable it when not used.

(2) When any of the objects checked are found for the first time, the GPS Chart Plotter shows a pop up window to alert the user of the possible danger. The name of each new dangerous object found is reported in the warning window. In the Grounding Alarm Report page the relative item has a tick marker next to it, to identify the dangerous object currently detected. If in the next search cycle the same objects are found again, the alarm window will not be shown. Instead, if in the next searches the objects found before are no longer detected, their relevant item in the Grounding Alarm Report page is cleared (note that in this case, if the same object type is found again later, the Alarm will be shown). The GPS Chart Plotter shows an icon on the charts that identifies when a Grounding Alarm is detected.

13.4 SIMULATION

The built-in Simulator function allows you to become proficient in the use of the GPS Chart Plotter, see the following Simulation Menu:

<table>
<thead>
<tr>
<th>Simulation Mode</th>
<th>Three selections:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>a. Off - turn the Simulation Mode Off</td>
</tr>
<tr>
<td></td>
<td>b. On - enable the Simulation Mode, where the speed and course are adjusted by entering in values in the Course and Speed selection discussed later in this table.</td>
</tr>
<tr>
<td></td>
<td>c. Route - this selection allows you to navigate to a saved route.</td>
</tr>
</tbody>
</table>

| Course | To start the simulator you can insert the Course value. |
| Speed  | To start the simulator you can insert the Speed value. |
| Date   | To start the simulator you can insert the date. |
| Time   | To start the simulator you can insert the time. |
| Cursor Control | Enables (On)/disables (Off) the cursor control. Moving the ShuttlePoint knob up or down will change the SOG and left or right will change the COG of the simulated vessel. |

| Demo Mode | In Demo Mode the GPS Chart Plotter automatically places a Destination point on the Chart page and simulates navigation to the point. Also, the active page changes automatically every 10 seconds. The pages are shown in the following order: Start-up screen, GPS Status, Chart/Compass tape, Chart/Fish Finder, Full page Fish Finder, Full page Radar, Navigation, Highway, Celestial, NMEA. Once the Demo Mode is enabled, pressing any key it is possible to temporarily exit and return to GPS Chart Plotter normal operation, but if you do not touch any key for 30 seconds Demo Mode re-starts. |
13.4.0 Navigating a Route in Simulation Mode

This selection allows you to navigate to a saved Route to see how data windows on the Chart page and how the Navigation and Highway pages operate.

1. Create a Route. Refer to Par. 9.0 “Creating a Route using Waypoints”.
2. Press [MENU], move the ShuttlePoint knob to highlight SETUP MENU and press [ENT].
3. Move the ShuttlePoint knob down to highlight ADVANCED SETUP, then press [ENT].
4. Move the ShuttlePoint knob to highlight SIMULATION and press [ENT].
5. Move the ShuttlePoint knob to highlight SIMULATION MODE and press [ENT] to show a popup window.
6. Move the ShuttlePoint knob to highlight ROUTE and press [ENT] which will show a popup window with the Route(s) that are stored in the GPS Chart Plotter’s memory.
7. Highlight the desired Route and press [ENT].
8. Move the ShuttlePoint knob to highlight SPEED and press [ENT].
9. Enter in the speed you want to vessel to travel at in Simulation Mode, by moving the ShuttlePoint knob left or right to select a number and up or down to change a number.
10. When the speed is adjusted, press [ENT].
11. Press [CLR] multiple times until the Chart page is shown.

13.5 DSC POLLING

This menu is used to enable or disable features related to the DSC function.

| Auto Position | Selects between Manual or Auto. See also the Par. 12.9. When Auto Position item is set to Manual and receiving the Position Request, the Position Request pop-up window is not displayed and the cursor does not move to the position of the received Position Request data point. Otherwise when Auto Position item is set to Auto, the GPS Chart Plotter works as follows:
|   | 1 : when receiving the Position Request, the Position Request popup window is displayed;
|   | 2 : when selecting VIEW ON CHART, the position is indicated on the chart marked with “P”. The cursor is moved to the point “P” and shows the point in the center of the screen;
|   | 3 : when moving the cursor from “P”, the location can be confirmed. At this time, the same MMSI Position Request data that were received before are remaining and displayed. |
| Auto Info | Enables or disables the Auto Info. This selection is available only when Auto Position is set to Manual. If Auto Info is set to On, when receiving the Position Request it is possible to center the cursor over the top of the Position Request icon and show the Position Request popup window |
14. AIS

AIS is an Automatic Identification System. It has been introduced to improve the safety of navigation by assisting in the efficient operation of ship-to-ship location reporting and VTS applications. The system should enable operators to obtain information from the ship automatically, requiring a minimum of involvement of ship’s personnel, and should have a high level of availability. AIS transponders installed on IMO vessels use VHF frequencies to:

- Transmit details of their own vessel
- Receive details from other vessels or navigation aids within VHF range.

STANDARD HORIZON GPS Chart Plotters are able to display AIS Target (for collision avoidance) on the Chart page and AIS List pages when connected to a AIS Receiver (GX2100 or GX2150 STANDARD HORIZON VHF/AIS transceiver) or transponders which output NMEA-0183 VDM sentence at 38400 or 4800 baud. The Chart Plotters are able to show targets from both Class A (commercial) and Class B targets.

14.0 SYSTEM DEFINITIONS

- **Target**: vessel equipped with AIS. Information about the Targets is being received by AIS Receiver and displayed on the screen.
- **CPA (Closest Point of Approach)**: the closest distance that will be achieved between your vessel and the tracked Target, based on your vessel’s speed and direction and the Target’s speed and direction.
- **CPA Limit**: distance from your vessel that a Target may reach before a Target is deemed a threat.
- **CPA Alarm**: occurs if CPA is less or equal to CPA Limit. This test is done for active Targets only.
- **TCPA (Time to Closest Point of Approach)**: time remaining until the CPA will occur.
- **TCPA Limit**: time remaining before the CPA is reached.
- **TCPA Alarm**: occurs if TCPA is less or equal to TCPA Limit. This test is done for active Targets only and if CPA value is less or equal to CPA Limit.
- **Radio Call Sign**: international call sign assigned to vessel, often used on voice radio.
- **Name**: name of ship, 20 characters.
- **MMSI (Maritime Mobile Service Identity) number**: a unique 9 digit number that is assigned to a DSC radio station. It primarily registers the boat information in the U.S. Coast Guard’s national distress database for use in emergency situations.
- **Active Target**: Target located within the Activation Range. Active Targets are represented by oriented triangle with COG and Heading vectors. Rate of turn may also be displayed.
- **Dangerous Target**: Target detected by CPA or TCPA Alarm. Dangerous Targets are Active Targets by definition. For better visibility Dangerous Target symbol is flashing.
- **Sleeping Target**: Target located outside the Activation Range. Sleeping Targets are represented by a small oriented triangle.
- **Lost Target**: when the AIS info is not received from that vessel for 3.5 minutes. The presentation will be a flashing black triangle with a cross through.
- **Activation Range**: range around your boat where Targets become active. AIS Targets become active within this range. Activation Range should be greater than CPA Limit by definition.
NOTE

A Target is removed from the screen if data is not received for 10 minutes. The maximum number of tracked Class A or B targets is 200. This information is updated every 3 seconds to 6 minutes depending on speed and rate of turn, enabling the track of the vessels in range to be plotted.

<table>

Figure 14.0 - AIS Symbols

14.1 AIS SETUP MENU

To configure the GPS Chart Plotter to receive AIS data, follow the procedure:
1. Press [MENU], move the ShuttlePoint knob to highlight SETUP MENU and press [ENT].
2. Move the ShuttlePoint knob to highlight AIS SETUP and press [ENT] or move the ShuttlePoint knob to the right. The AIS menu appears on the screen. The available functions are described in the following table.

- **Display**: Turns the display of AIS Targets overlay on the cartography On or Off. The default setting is On.
- **Activation Range**: Defines the range from the fix within which the AIS Target becomes active. The values allowed are from 0.1 to 20Nm. The default setting is 5Nm.
- **CPA Alarm**: Turns On or Off the alarm. The default setting is On.
- **CPA Limit**: The values allowed are from 0.1 to 10 Nm. The default setting is 0.5Nm.
- **TCPA Alarm**: Turns On or Off the alarm. The default setting is On.
- **TCPA Limit**: The values allowed are from 1 to 30 Min. The default setting is 10 Min.
- **SART/MOB/EPIRB Test**: Turns On or Off receiving of AIS-SART, AIS-MOB or AIS-EPIRB test alerts.

14.2 QUICK INFO ON AIS TARGET

By placing the cursor over a AIS Target icon using the ShuttlePoint knob, the following information is displayed. Press [EXPAND] to select the Enhanced AIS Page with information related to the selected AIS object (see the following Par. 14.6).

1. Vessel name
2. MMSI number
3. Speed over Ground
4. Closest Point of Approach
5. Radio Call Sign
6. Course Over Ground
7. Time to Closest Point of Approach

Figure 14.2 - Quick Info on AIS
14.3 AIS TARGET COLORS

The received AIS Targets are shown in color. The color depicts the type of AIS ship shown on the Chart page. Refer to following table.

<table>
<thead>

Figure 14.3 - AIS Targets Colors

14.4 AIS-SART

AIS-SART, AIS-MOB and AIS-EPIRB signals are all emergency signals sent out by different types of survivor locating devices. When an AIS-SART, AIS-MOB or AIS-EPIRB signal is received, the GPS Chart Plotter will display and sound an alarm. The AIS-SART icons will be displayed on the chart depending on the current status of the emergency signal (see the following table).

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

Figure 14.4 - AIS-SART

14.4.0 AIS-SART Test Mode

The GPS Chart Plotter by default ignores test AIS-SART, AIS-MOB and AIS-EPIRB signals
in order to avoid a large number of alerts. However the GPS Chart Plotter can be enabled to receive test alerts (see Par. 14.1 “AIS Setup Menu”) if you want to test them.

14.5 AIS LIST

The AIS List page shows basic information of the Target ship with the ability to select a Target ship and locate it on the chart. AIS Targets are sorted by distance from current GPS position: the closest Targets are displayed at the top of the list. AIS-SART, AIS-MOB and AIS-EPIRB objects are also listed on this page and are also sorted by distance.

**NOTE**

When the received Targets exceed the maximum limit allowed for the list, the closest Targets (which could be potentially the most dangerous) will be kept in memory and the farthest (potentially less dangerous) will be lost.

To select this page follow the procedure:

1. Press [MENU], move the ShuttlePoint knob to highlight USER POINTS and press [ENT].
2. Move the ShuttlePoint knob to highlight AIS LIST and press [ENT].
3. Move the ShuttlePoint knob up or down to select the Target and scroll the page up or down. Press [CLR] exits the page and shows the Target ship on the Chart page along with the current position of the GPS Chart Plotter.

This page allows to:

| LOCATE | Locates the selected AIS object on the Chart page |
| EXPAND | Opens the Enhanced AIS page with information related to the selected AIS object (see the following Par. 14.6). |

14.6 ENHANCED AIS PAGE

The Enhanced AIS page contains all data related to the selected AIS object. The page shows data received from AIS sentences Class A Position Report, Class A Static & Voyage Data, Class B Reports or calculated by the software.

The Enhanced AIS page can be selected in two ways:
1. From the Chart page
   1. Place the cursor over a AIS Target icon using the ShuttlePoint knob.
   2. Press [EXPAND] to select the Enhanced AIS Page with information related to the selected AIS object.

2. From the AIS List page
   1. Press [MENU], move the ShuttlePoint knob to highlight USER POINTS and press [ENT].
   2. Move the ShuttlePoint knob to highlight AIS LIST and press [ENT].
   3. Move the ShuttlePoint knob to highlight EXPAND and press [ENT].

The data contained in the Extended AIS page are:
- MMSI = MMSI number
- NAME = Name of ship (20 characters)
- POSITION = Latitude and Longitude
- CALL SIGN = Call Sign
- IMO No. = IMO number
- STATUS = AIS Navigation Status
- LAST SEEN = date and time of the last received updated for the selected object (MMSI number)
- SOG = Speed Over Ground
- COG = Course Over Ground
- HDG = True Heading
- ROT = Rate Of Turn
- CPA = Closest Point of Approach
- TCPA = Time to Closest Point of Approach
- DEST = Destination name (20 characters)
- ETA = Estimated Time of Arrival
- TYPE = Type of ship and cargo type
- LENGTH = Length of ship
- DRAUGHT = Maximum present static draught
- BEAM = Beam of ship

14.6.0 AIS Vessel Types

The types of vessel displayed in the Type box are shown in the following table.
<table>
<thead>

Figure 14.6.0 - AIS Vessel Types
15. C-WEATHER SERVICE

C-Weather is a free service available on the CP390i. C-Weather service gives excellent coverage for the whole World. Weather forecasts are based on data received from the leading meteorological centers. This data is processed by Jeppesen server and made available via INTERNET connection to be transferred by using the C-Map BY JEPPESEN PC-Planner Windows Application. Then the weather data can be saved into a User C-CARD to be loaded by the GPS Chart Plotter (see Par. 15.0.1).

Features: 5-day weather forecast updated every 6 hours; coverage of 180x180 Nm with information frequency of 0.5° Lat/Lon; wind direction and strength; wave height and direction; ground temperature; level of humidity; visibility in miles.

Figure 15 - Weather data package

15.0 C-WEATHER SERVICE MENU

To select the menu:
1. Press [MENU], move the ShuttlePoint knob to highlight SETUP MENU and press [ENT].
2. Move the ShuttlePoint knob to highlight C-WEATHER SERVICE and press [ENT] or move the ShuttlePoint knob to the right.

The C-Weather Menu is shown on the screen, the items are described in the following paragraphs.

15.0.0 Download

Allows to connect the software to the weather server and to download weather data directly via C-COM.

Select Country To Call : Allows the selection of the country to call. The whole telephone number set is automatically updated after every download.

SIM Pin : Allows inserting of the Pin of the SIM.
Download Area: Allows the weather download: a squared grey area, where the weather data will be downloaded, is centered on cursor position. See the following picture.

Press [LOAD] to activate the C-Weather Download: the whole data package (see the previous "Weather data package" table) are downloaded. [STOP] allows to interrupt the data download. At the end of the operation press [EXIT] to close the window.

15.0.1 Copy from User C-CARD

Allows the whole data package C-Weather loading from the User C-CARD.

15.0.2 Weather Forecast

Allows selecting the Layer of specific weather data to be displayed on the screen and to change date and time of the forecast preview. The following functions are available:

- Panning: default usage of the cursor key is the normal panning function.
- Zoom in/out: zoom in/out functions are allowed as usual by using [ZOOM IN]/[ZOOM OUT].
- Set of date and time: [DATE] to modify date and time values.
- Layer selection: [LAYER] to cycle of the weather layers.
- Exit: [EXIT] to close the weather prediction page.

15.0.3 Real Time View

The following selections are available:

- Real Time View On: the data is shown (the area of the download) at the current date and time (received from the GPS).
- Real Time View Off: the weather data is not displayed.

The layer displayed is the one selected into the previous menu item.

15.0.4 Type of Data

Allows selecting the type of data, refer to the table in the Figure 15.
16. MOBILARM

The MOBILARM is an automated crew monitoring system dedicated to monitoring onboard crew by maintaining a constant link between the crew member and the boat. When a man over-board event happens, an automatic alarm is sounded, and the vessel’s position is shown on the STANDARD HORIZON GPS Chart Plotter.

16.0 MOBILARM-GPS CHART PLOTTER CONNECTION

Connect the MOBILARM system to one of the Ports on the STANDARD HORIZON GPS Chart Plotter. Refer to Par. 2.4.0 “Connection Table” and MOBILARM Owner’s Manuals for connections.

Connection Example

![Connection Diagram](image)

**NOTE**

Note the CP390i has 3 Ports so Port1, Port2 or Port3 can be used.
Port1 Example

<table>
<thead>
<tr>
<th>Chart Plotter</th>
<th>MOBILARM</th>
</tr>
</thead>
<tbody>
<tr>
<td>Blue</td>
<td>NMEA Out</td>
</tr>
<tr>
<td>Brown</td>
<td>NMEA In</td>
</tr>
<tr>
<td>Red</td>
<td>GPS V+</td>
</tr>
<tr>
<td>Black</td>
<td>GPS V-</td>
</tr>
</tbody>
</table>

**NOTE**

Refer to the Figure 16.0, the Blue and Brown wires are from Port1. If these wires are being used to connect to another NMEA device, choose another wire pair and configure the port associated with the wires.

### 16.1 SOFTWARE SETUP

After the Port has been chosen and connected in Par. 16.0, the GPS Chart Plotter must be setup to communicate with the MOBILARM.

Use the steps below to set up the Port the MOBILARM is connected to the GPS Chart Plotter.

1. Select the Chart page.
2. Press **[MENU]**, move the ShuttlePoint knob to highlight **SETUP MENU** and press **[ENT]**.
3. Move the ShuttlePoint knob to highlight **ADVANCED SETUP** and press **[ENT]** or move the ShuttlePoint knob to the right.
4. Move the ShuttlePoint knob to highlight **IN/OUT CONNECTIONS** and press **[ENT]** or move the ShuttlePoint knob to the right.
5. Move the ShuttlePoint knob to highlight any input port and press **[ENT]** or move the ShuttlePoint knob to the right.
6. Move the ShuttlePoint knob up/down to select **MOBILARM** and press **[ENT]** or move the ShuttlePoint knob to the right. Selecting MOBILARM format, activates the function.
7. Press **[CLR]** or move the ShuttlePoint knob to the left until the Chart page is shown.

The GPS Chart Plotter continuously verifies the communication status with MOBILARM PTX (Personal Transponder) device. When a signal from the PTX is lost for more than one minute, the MOBILARM sends a NMEA message to the GPS Chart Plotter which will produce an alarm and a popup window will be shown on STANDARD HORIZON GPS Chart Plotter.

### 16.2 MOBILARM STATUS

To confirm the status of the MOBILARM, select the About page:

1. Select the Chart page.
2. Press **[MENU]** two times. Move the ShuttlePoint knob to highlight **About...** and press **[ENT]**.

On the About page you can see the status of the MOBILARM, below are the possible messages.

- **Function not Activated**: MOBILARM has not been setup in the I/O Connections menu. Refer to Par. 16.1.
- **Not connected/detected**: possible wiring problem, confirm wires are correct con-
c. **Connected** : the communication with MOBILARM device is Ok.
d. **Signal Lost** : the MOBILARM has been connected in the past, however no signal is being detected from the MOBILARM. Check wire connections from the GPS Chart Plotter to the MOBILARM.
e. **No valid GPS position** : the communication with MOBILARM device is Ok, but the GPS position fix is not received from the GPS Chart Plotter.

See the following example of About page:

![Figure 16.2 - Example of About page with MOBILARM information](image)

### 16.3 MOBILARM PTX

A PTX is the Personal Transponder device that is worn by the crew. If a crew member falls in the water the MOBILARM sends a signal to the GPS Chart Plotter which creates and displays a PTX icon on the Chart page.

#### 16.3.0 MOBILARM MOB alert is received

When crew member falls in the water, the MOBILARM sends a signal to the GPS Chart Plotter which creates and displays a PTX MOB icon on the Chart page.

![Figure 16.3.0 - The PTX icon](image)

On the GPS Chart Plotter all menus and/or pages are closed and the chart is centered on the PTX MOB received position. A Audible Alarm is heard and a pop-up warning window appears to notify that a PTX has been received:
It is possible to Goto (navigate) to the received MOBILARM PTX position (see Par. 16.4.1) or open the MOBILARM Alarm Status List page (see Par. 16.4.2). Selecting Goto or Alarm Status List will mute the Audible Alarm.

**NOTE**

When the same PTX is received again:

a. If the received PTX is not the active one, the user must confirm to navigate to it.

b. If the received PTX is the active one, navigation data is updated. The PTX icon appears at the new position and a pop-up warning window appears.

### 16.4 PLACING CURSOR ON THE PTX ICON

Moving the ShuttlePoint knob so the cursor is over the PTX icon on the Chart page will show an information window and allow you to Goto the location of the PTX, delete the PTX icon or show the Alarm Status list as shown below.

#### 16.4.0 Delete PTX

The Delete PTX function permanently removes the selected PTX from the MOBILARM Alarm Status List and from the Chart page. Using the ShuttlePoint knob, move the cursor over the PTX icon and then press [DELETE]. A warning pop-up window will be shown. Select YES and press [ENT].

#### 16.4.1 Goto PTX

When Goto is selected on the GPS Chart Plotter, navigation will start to the PTX icon location. After the GPS Chart Plotter has received a PTX MOB alarm, using the ShuttlePoint knob move the cursor over the PTX to navigate to and then two Soft Keys under the display
will be shown:

a. **[GOTO]**, when pressed will start navigating to the PTX MOB location
b. **[List]**, when pressed will show the MOBILARM Alarm Status List page. Refer to Par. 16.4.2 for Alarm Status List.

If the navigation is set to the selected PTX icon, to terminate the navigation press **[StopGoto]**.

### 16.4.2 The MOBILARM Alarm Status List

The MOBILARM Alarm Status List shows the list of all PTX that the GPS Chart Plotter has received an alarm from. To review the page:

1. Select the Chart Page.
2. Press **[MENU]** to show the Main Menu.
3. Move the ShuttlePoint knob to highlight **USER POINTS** and press **[ENT]**.
4. Move the ShuttlePoint knob to highlight **MOBILARM** and press **[ENT]**.

1. PTX number
2. Time the PTX alarm was received
3. PTX position
4. PTX status

![Example of MOBilarm PTX List page](image-url)
This page allows you to:

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>GOTO</strong></td>
<td>Activates navigation to the selected PTX. Once the navigation has been activated, close all menus/data pages (if open) and center the chart selected PTX.</td>
</tr>
<tr>
<td><strong>DELETE</strong></td>
<td>Deletes the selected PTX.</td>
</tr>
<tr>
<td><strong>SHOW</strong></td>
<td>Centers the chart on the selected PTX.</td>
</tr>
<tr>
<td><strong>SHOW ALL</strong></td>
<td>Selects the best chart scale to see all PTX icons on the chart at the same time.</td>
</tr>
</tbody>
</table>
17. TROUBLESHOOTING

The GPS Chart Plotter does not turn On. The voltage or the polarity may not be correct. Make sure that the correct voltage (10-35 volt dc) is present. Check also that the polarity is correct.

The GPS Chart Plotter does not get a GPS fix. The external WAAS GPS antenna may not be in an open sky position or the antenna cable may not be properly connected. Make sure that no metal obstacle (solar panel about the GPS Chart Plotter) is placed around the GPS Chart Plotter (or external antenna when connected) acting as a shield for the antenna and disconnect and connect again the antenna cable to the GPS Chart Plotter. If, after 15 minutes, the GPS Chart Plotter does not get the fix, turn it Off and On again.

The GPS Chart Plotter does not turn Off. The GPS Chart Plotter may be in an unpredictable status. If, after pressing [PWR] (for at least 3 seconds) the GPS Chart Plotter does not turn Off, turn Off the voltage.

The GPS Chart Plotter screen becomes very dark after a long exposure to direct sunlight. The internal temperature is very high. Protect the GPS Chart Plotter from direct sunlight.

The GPS Chart Plotter does not respond to any command. The GPS Chart Plotter may be in an unpredictable status. Try to turn Off, and then turn On. If the problem persists, reset the RAM or remove power from the battery.

The location of my fix is not shown correctly on the Chart page. Please report to C-MAP USA (800/424-2627) the Latitude & Longitude of your vessels position, the position where you think your vessels should be and details of the cartography such as “Compilation scale”, “Notice to mariners” and “Horizontal datum” (which can be seen by selecting the Chart page, press [FIND], move the ShuttlePoint knob to Data Source and press [ENT]).

After storing the GPS Chart Plotter over the winter, it takes a long time to receive a fix. This is usually caused by the internal rechargeable memory battery from becoming low which could cause the Internal RAM memory to become corrupted. To solve this issue, perform a RAM Clear (refer to Chapter 19).

NOTE
After performing a RAM Clear all Marks, Routes and tracks will be erased. To backup these points refer to Chapter 11 for details.
18. TECHNICAL TESTS

18.0 SYSTEM TEST

If you have connected your GPS Chart Plotter according to the instructions, and chosen the proper menu selection for your device, and are still having problems with your GPS Chart Plotter, the extended auto-test should help determine the problem. Make sure the GPS Chart Plotter is turned Off. While pressing and holding any other key, turn the GPS Chart Plotter On. A new menu will appear on the display:

![System Test Menu]

1. Software name and version
2. NT+ Software Library version

Use the ShuttlePoint knob to select the desired test. Choose the test, press [ENT]. To exit from any submenu press [CLR]. To exit from the System Test turn Off the GPS Chart Plotter.

18.0.0 RAM Menu (reset)

This test verifies the integrity of the memories and if desired during this test all the internal memory can be erased and the default settings restored.

RAM Clear
To clear internal memory. If the GPS Chart Plotter exhibits unusual operations, or appears to be malfunctioning, it may be possible to correct the problem by clearing RAM. This operation will erase all Marks, Routes, stored Track plots and Destinations. It will also return all selections (Input Data Format, Autopilot selection, etc.) to original default values. To confirm clear RAM press [ENT] again (but if at this time you do not wish to clear RAM press [CLR]).

18.0.1 DIM Menu

To select the desired value for brightness and keypad light.

Contrast
Each time you move the ShuttlePoint knob to right, the screen will decrease brightness, move it to the left to increase brightness.

Backlight
The second option allows to set the backlight. Operates in similar mode as Contrast.
18.0.2 Cartridges

To check the C-CARD and its connector.

**Internal Data Base Test**
To test the World Wide Background.

**C-CARD Test**
To test the C-CARD. There are the possible situations:
1. if there is a C-CARD inserted in the slot and there is not a malfunction, the name of the C-CARD zone and the message "OK" are shown.
2. if there is a C-CARD inserted in the slot, but it is a defective C-CARD, the name of the C-CARD zone and the message "Faulty" are shown.
3. if there is not any C-CARD inserted in the slot, the message "not present" is shown.
4. if there is a User C-CARD inserted in the slot, the message **USER C-CARD** is shown.

**C-CARD Connector**
Indicates if there is a malfunction in the connector.

18.0.3 Serial Ports

If you are having problems receiving data from the position-finding instrument, this test should help determine the problem.

**Change Parameters**
To change the parameters of the serial interface. This menu allows to select the **Port** (Signal Source) between Port1, Port2, Port3, Port4 and Port5; the **Baud Rate** between 300, 1200, 2400, 4800, 9600, 38400, 115200; the **Data Bits** (Word Length) between 7 or 8, the **Parity** between even, odd or none, the **Stop Bits** between 1 or 2. Default settings are: Port = PORT2, Baud Rate = 4800, Data Bits = 8, Parity = none, Stop Bits = 1.

**Input Data Display**
To allow the GPS Chart Plotter to act as a computer terminal and display the incoming data exactly as it is received.

If the data displayed on the screen are unrecognizable, you may have selected the wrong input parameters for your particular receiver, for example, Baud Rate 9600 instead of Baud Rate 4800. Check your receiver manual to be sure that you have selected the proper parameter. If the screen is blank, you may have a broken connection, and no data is being received or you may have connected the device to the other input port.

Use **[ZOOM IN]** to stop (or continue after pause) data displaying, **[ENT]** to show data in hex or ASCII mode (normal or small) and **[CLR]** to exit.

**Loop-Back Test**
This is a special test done during the production phase to check the serial ports integrity. This function is only required by STANDARD HORIZON.

19.2 OPTIONAL FF525 FISH FINDER SPECIFICATIONS

- **Power Output**: 600W or 1kW depending on connected transducer
- **Frequency**: 50 and 200kHz
- **Minimum Depth**: 5ft at 50kHz, 2.5ft at 200kHz
- **Maximum Depth**: 1500ft at 50kHz, 700ft at 200kHz
- **Airmar X-DUCER ID**: Must use STANDARD HORIZON transducers
- **Advanced Digital Signal Processing**
- **Speed & Temperature Sensor** (if available on transducer)
- **Alarms** (Shallow Water, Depth, Fish, Temperature)
- **Trip Log, Fish Symbols**
- **STC, Interference Rejection, Automatic noise reduction**
- **A-Scope, White Line, Zoom x2/x4**
- **Auto range/gain/frequency/shift/ping rate**
- **16/256 colors display user selectable**
19.3 OPTIONAL WAAS GPS RECEIVER SPECIFICATIONS

This optional WAAS GPS Receiver is based on a ultimate GPS engine that delivers accuracy better than three meters by decoding the GPS correction signals from the satellite-based WAAS (Wide Area Augmentation System). The GPS engine, interface electronics and the passive antenna are enclosed inside the water-proof plastic housing. This provides advanced state of the art GPS performance in an easy to use package.

</table>
20. APPENDIX: TERMS

AIS (Automatic Identification System): Improves the safety of navigation by assisting in the efficient operation of ship-to-ship location reporting and VTS applications.

AIS-MOB: Man Over Board Device (Maritime Survivor Locating Device) with AIS transmitter.

AIS-SART: SART (Search And Rescue Transponder) device with AIS transmitter.

ALT (Altitude): Shows the Altitude of the GPS antenna on the mean sea level. It is received from GPS, sentence GGA.

AWD (Apparent Wind Direction): Shows the Apparent Wind Direction when a external wind instrument with NMEA is connected.

AWS (Apparent Wind Speed): Shows the Apparent Wind Speed when a external wind instrument with NMEA is connected.

BRG (Bearing): The direction from your current position to a Destination point.

COG (Course Over Ground): The course your vessel is heading.

DATE: Shows the current date received by the GPS.

DEPTH AREAS: Sea areas included in the user selectable range of minimum and maximum depth limits. The sea area that is beyond the selected range is filled by an uniform white color, the sea area that is inside the selected range is filled by ordinary multicolor shading. The Spot Soundings and Depth Contours are displayed on the range only.

DPT (Depth): Shows the water depth when the optional FF525 50/200kHz Black Box Fish Finder or digital Depth Sounder is connected.

DRAUGHT: Depth of water the vessel draws. The definition of draught (or draft) of a ship’s hull is the vertical distance between the waterline and the bottom of the hull (keel). Draught determines the minimum depth of water a ship or boat can safely navigate. On the Celestial page the “draught” window shows the height of the tidal water during a 24hr period of time. This height is dependant on the time of day selected using the ShuttlePoint knob.

DSC (Digital Selective Calling): Semi-automated method of establishing a VHF Radio Call. DSC had also been designated as part of the Global Maritime Distress and Safety System (GMDSS). It is planned that DSC will eventually replace aural watches on distress frequencies and will be used to announce routine and urgent maritime safety information broadcasts.

DST (Distance): The distance from your current position to a Destination point.

ETA: Estimated Time of Arrival

GPS Constellation: The Global Positioning System (GPS) is a space-based radio-navigation system consisting of a constellation of satellites and a network of ground stations used for monitoring and control. A minimum of 24 GPS satellites orbit the Earth at an altitude of approximately 11,000 miles providing users with accurate information on position, velocity and time anywhere in the world and in all weather conditions.

GPS2D: The GPS is receiving at least 2 valid satellites.

GPS3D: The GPS is receiving at least 3 valid satellites.

HDG (Heading): Shows heading from a external Flux Gate Compass when connected.
HDOP/VDOP (Horizontal/Vertical Dilution of Precision): Parameter indicating the precision of the positioning system (GPS). The smaller the HDOP/VDOP value, the more accurately the position fix is provided.

HEIGHT: The current Tide Height referred to the vertical cursor.

HEIGHT WATER: The maximum level of the Tide Height in 24 hours.

LOW WATER: The minimum level of the Tide Height in 24 hours.

PINGO: Mound of earth-covered ice found in the Arctic and subarctic that can reach up to 70m (230ft) in height and up to 600m (2,000ft) in diameter.

Position Request: Marine DSC VHF Function of transmitting a GPS position to another Marine DSC VHF. When the GPS Chart Plotter is connected to STANDARD HORIZON GPS the position of another vessel is shown on the Chart page.

SOG (Speed Over Ground): The speed your vessel is travelling at.

SPD (Speed): Shows the Speed Thru the Water when a Digital Speed Log is connected.

STR (Steer): Heading to steer to destination Waypoint.

TIME: Shows the current time received by the GPS.

TLOG (Trip Log): Shows the distance the vessel has travelled since the Trip Log was reset.

TWD (True Wind Direction): Shows the True Wind Direction when an external wind instrument with NMEA is connected.

TWS (True Wind Speed): Shows the True Wind Speed when an external wind instrument with NMEA is connected.

TTG (Time To Go): Shows time to go to reach a Destination point.

UNITS

Nm Nautical Mile (1Nm = 1.15SM or 1.85km)
SM Statute Mile (1SM = 0.87Nm or 1.61km)
km kilometer (1km = 0.62SM or 0.54Nm)
ft feet (1ft = 0.167ftm or 0.305m)
ftm Fathom (1ftm = 6ft or 1.83m)
m meters (1m = 3.28ft or 0.55ftm)
kn knots (1kn = 1.15mph or 1.85km/h)
mph miles per hour (1mph = 0.87kn or 1.61km/h)
km/h kilometer per hour (1km/h = 0.54kn or 0.62mph)

VMG: It is the destination closing Velocity. The VMG is calculated using the current speed of the vessel (SOG) and the difference between the current vessel course and the bearing to the Destination.

WAAS 2D/3D: The GPS is receiving a 2D or 3D position and the correction from the WAAS satellite. WAAS consists of approximately 25 ground reference stations positioned across the United States that monitor GPS satellite data. Two master stations, located on either coast, collect data from the reference stations and create a GPS correction message. This correction accounts for GPS satellite orbit and clock drift plus signal delays caused by the atmosphere and ionosphere. The corrected differential message is then broadcast through one of two geostationary satellites, or satellites with a fixed position over the equator. The information is compatible with the basic GPS signal structure, which means any WAAS enabled GPS receiver can read the signal.

W-T (Water Temperature): Shows the sea water temperature when the FF525 50/200kHz Black Box Fish Finder or a digital Speed Log/Temp instrument with NMEA is connected.

XTE (Cross Track Error): The distance your vessel is off course (left or right) to a Destination point.

PLEASE NOTE
The following "Limited Warranty" is for customers that have purchased products in the United States. For Limited Warranty details outside the United States, contact the dealer in your country.

STANDARD HORIZON LIMITED WARRANTY

STANDARD HORIZON (the Marine Division of YAESU USA) warrants, to the original purchaser only, each new Marine Product ("Product") manufactured and/or supplied by STANDARD HORIZON against defects in materials and workmanship under normal use and service for a period of 3 years from the date of purchase.

In the event of a defect, malfunction or failure of the Product during the warranty period, STANDARD HORIZON's liability for any breach of contract or any breach of express or implied warranties in connection with the sale of Products shall be limited solely to repair or replacement, at its option, of the Product or part(s) therein which, upon examination by STANDARD HORIZON, appear to be defective or not up to factory specifications. STANDARD HORIZON may, at its option, repair or replace parts or subassemblies with new or reconditioned parts and subassemblies.

To receive warranty service, the purchaser must deliver the Product, transportation and Insurance prepaid, to STANDARD HORIZON (Marine Division of YAESU USA) - Attention Factory Service - 6125 Phyllis Drive-Cypress, CA 90630, include proof of purchase indicating model, serial number and date of purchase.

STANDARD HORIZON will pay all labor and replacement parts charges incurred in providing the warranty repair service except where purchaser abuse or other qualifying exceptions exist. The purchaser must pay any transportation expenses incurred in returning the Product to STANDARD HORIZON for service.

This limited warranty does not extend to any Product which has been subjected to misuse, neglect, accident, incorrect wiring by anyone other than STANDARD HORIZON, improper installation, or subjected to use in violation of instructions furnished by STANDARD HORIZON, nor does this warranty extend to Products on which the serial number has been removed, defaced, or changed. STANDARD HORIZON cannot be responsible in any way for ancillary equipment not furnished by STANDARD HORIZON which is attached to or used in connection with Products, or for the operation of the Product with any ancillary equipment, and all such equipment is expressly excluded from this warranty. STANDARD HORIZON disclaims liability for range, coverage, or operation of the Product and ancillary equipment as a whole under this warranty.

STANDARD HORIZON reserves the right to make changes or improvements in Products, during subsequent production, without incurring the obligation to install such changes or improvements on previously manufactured Products. The implied warranties which the law imposes on the sale of this Product are expressly LIMITED, in duration, to the time period specified above. STANDARD HORIZON shall not be liable under any circumstances for consequential damages resulting from the use and operation of this Product, or from the breach of this LIMITED WARRANTY, any implied warranties, or any contract with STANDARD HORIZON. IN CONNECTION WITH THE SALE OF ITS PRODUCTS, STANDARD HORIZON MAKES NO WARRANTIES, EXPRESS OR IMPLIED AS TO THE MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR OTHERWISE, EXCEPT AS EXPRESSLY SET FORTH HEREIN.

Some states do not allow the exclusion or limitation of incidental or consequential damages, or limitation on how an implied warranty lasts, so the above limitation or exclusions may not apply. This warranty gives specific legal right, and there may be other right which may vary from state to state.
