Congratulations on your purchase of the HX600S! Whether this is your first portable marine VHF transceiver, or if you have other STANDARD HORIZON equipment, the STANDARD HORIZON organization is committed to ensuring your enjoyment of this high performance transceiver, which should provide you with many years of satisfying communications even in the harshest of environments. STANDARD HORIZON technical support personnel stands behind every product sold, and we invite you to contact us should you require technical advice or assistance.

We appreciate your purchase of the HX600S, and encourage you to read this manual thoroughly, so as to learn and fully understand the capabilities of the HX600S.

**WARNING**
This radio is capable of transmitting on VHF Marine.

The FCC allows the use of VHF Marine band on water areas only. However, the FCC does not allow the use of the VHF Marine band when on land. If persons use the VHF Marine Band on land and interfere with others communicating, the FCC will be notified and search for the interference. Responsible parties found to be transmitting on the VHF Marine Band on land could be fined up to $10,000 for the first offense.
RF EXPOSURE SAFETY STATEMENT

SAFETY INFORMATION

Your wireless handheld portable transceiver contains a low power transmitter. When the Push-to-Talk (PTT) button is pushed, the transceiver sends out radio frequency (RF) signals. In August 1996, the Federal Communications Commission adopted RF exposure guidelines with safety levels for hand-held wireless devices.

This device is authorized to operate at a duty factor not to exceed 50% (this corresponds to 50% transmission time and 50% reception time).

WARNING: To maintain compliance with the FCC’s RF exposure guidelines, this transmitter and its antenna must maintain a separation distance of at least 1 inch (2.5 centimeters) from your face. Speak in a normal voice, with the antenna pointed up and away from the face at the required separation distance.

If you use a headset accessory for this radio, with the radio worn on your body, use only the Vertex Standard belt clip for this transceiver, and ensure that the antenna is at least 1 inch (2.5 centimeters) from your body when transmitting.

Use only the supplied antenna. Unauthorized antennas, modifications, or attachments could damage the transmitter, and may violate FCC regulations.

NOTE

This radiotelephone complies with the requirements of RTCM Paper 56-95/SC101 Standards for digital selective calling (DSC) for Marine transceivers.
FCC AND CANADA RADIO LICENSE INFORMATION

Standard Horizon radios comply with the Federal Communication Commission (FCC) and Industry-Canada requirements that regulate the Maritime Radio Service.

MARITIME STATION LICENSE

An FCC ship station license is no longer required for any vessel traveling in U.S. waters which uses a VHF marine radio, RADAR or EPIRB, and which is not required to carry radio equipment. However, any vessel required carrying a marine radio on an international voyage, carrying a HF single sideband radiotelephone or marine satellite terminal. FCC license forms, including applications for ship (506) and land station licenses can be downloaded via the Internet at www.fcc.gov/forms. To obtain a form from the FCC, call (888) 225-5322.

MARINE RADIO CALL SIGN

Currently the FCC does not require recreational boaters to have a Ship Radio Station License. The USCG recommends the boats registration number and the state to be used.

CANADIAN SHIP STATION LICENSING

You may need a license when traveling in Canada. If you do need a license contact their nearest field office or regional office or write:

Industry Canada
Radio Regulatory Branch
Attn: DOSP
300 Slater Street
Ottawa, Ontario
Canada, K1A 0C8

FCC/INDUSTRY CANADA INFORMATION

The following data pertaining to the transceiver is necessary to fill out the license application.

FCC Type Accepted: ................................................................. Part 80
Output Power with FNB-83: ......... 1 W (Low), 2.5 W (Mid), and 5 W (High)
Emission: ................................................................. 16K0G3E, 16K0G2B
Frequency Range: ................................. 156.025 to 163.275MHz
FCC Type Number: ...................................................... K6630193X20
Industry Canada Type Approval: ....................... 511B-30193X20
FCC NOTICE
Unauthorized changes or modifications to this equipment may void compliance with FCC Rules. Any change or modification must be approved in writing by STANDARD HORIZON, a Marine Division of VERTEX STANDARD.

NOTICE
This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

Increase the separation between the equipment and receiver.
Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
Consult the dealer or an experienced marine electronics technician for help.

PROHIBITED COMMUNICATIONS
The FCC prohibits the following communications:
• False distress or emergency messages:
• Messages to "any boat" except in emergencies and radio tests;
• Messages to or from a vessel on land;
• Transmission while on land;
• Obscene, indecent, or profane language (potential fine of $10,000).
1. GENERAL INFORMATION

1.1 INTRODUCTION
The HX600S is a SUBMERSIBLE miniature 5-Watt portable two-way marine transceiver. The transceiver has all allocated USA, International, or Canadian channels. It has emergency channel 16 which can be immediately selected from any channel by pressing the [16/9] key. NOAA Weather channels can also be accessed immediately by pressing the [WX] key. In addition to these functions the HX600S can transmit a Digital Selective Distress Call with Latitude/Longitude when a GPS is connected to the CD-36 Cradle Charger.

Besides VHF marine transceiver operation, the HX600S provides receive ONLY coverage of AM, FM broadcast bands and AM aircraft bands.

The HX600S includes the following features: Memory Scanning, Priority Scanning, NOAA Weather Alert, NOAA SAME, Battery Saver, easy-to-read large LCD display, EEPROM memory back-up, Battery Life displayed on LCD, Transmit Time-Out Timer (TOT) and a strobe light when enabled blinks the internationally recognized SOS distress signal.

In the marine band, the transmitter provides a maximum of 5 Watts output, and has the selection of 2.5 Watts and 1 Watt to assist the user in ensuring maximum battery life.

The optional FVP-31 Voice Scrambler can be installed to permit secure voice communications with other Standard Horizon radios with the FVP-31 scramblers installed.
2. ACCESSORIES

2.1 PACKING LIST
When the package containing the transceiver is first opened, please check it for the following contents:

- **HX600S** Transceiver
- **CAT460** Antenna
- **FNB-V98LI** 7.4 V, 1700 mAh Li-Ion Battery Pack
- **CD-36** Charger Cradle for **HX600S**
- **NC-90B** 120 VAC Overnight Charger for **CD-36**
- **E-DC-19A** DC Cable with 12 V Cigarette Lighter Plug for **CD-36**
- Owner’s Manual

2.2 OPTIONS

1. **CMP460** Noise-canceling Waterproof Speaker/Microphone
2. **MH-57A4B** Mini Speaker/Microphone
3. **VC-24** VOX Headset
4. **VC-27** Earpiece/Microphone
5. **FVP-31** Voice Scrambler
6. **CD-36** Charger Cradle
7. **FNB-V98LI** 7.4 V, 1700 mAh Li-Ion Battery Pack
8. **FBA-25A** Alkaline Battery Case
9. **E-DC-19A** DC Cable with 12 V Cigarette Lighter Plug
10. **NC-90B/C** 120/230 VAC Overnight Charger for the **FNB-V98LI**
11. **E-DC-6** DC Cable; plug and wire only
12. **CAW230** Radio-to-Ship’s-Antenna Adapter

*Note:* Before operating the **HX600S** for the first time, it is recommended that the battery be charged. Please see section 4.1.4 “USING THE CD-36 CHARGER CRADLE” for details.
3. ABOUT THIS RADIO

3.1 ABOUT THE VHF MARINE BAND

**WARNING:**

The radio frequencies used in the VHF marine band lie between 156 and 158 MHz with NOAA Weather stations available between 161 and 163 MHz. The marine VHF band provides communications over distances that are essentially "line of sight" Actual transmission range depends much more on antenna type, gain and height than on the power output of the transmitter. A portable 5W radio transmission expected distance can be greater than 5 miles "line of sight."

The user of a Marine VHF radio is subject to severe fines if the radio is used on land. The reasoning for this is you may be near an inland waterway, or propagation anomalies may cause your transmission to be heard in a waterway. If this occurs, depending upon the marine VHF channel on which you are transmitting, you could interfere with a search and rescue case, or contribute to a collision between passing ships. For VHF Marine channel assignments refer to page 40 section 13.

3.2 ABOUT RECEIVE ONLY CHANNELS and FREQUENCIES

**AM/FM Broadcast Bands**

The AM/FM bands contained within the HX600S are the same channels you use every day to listen to music, news and commentary with your car or home stereo.

The AM broadcast band currently extends from 500 to 1800 kHz. Channels are spaced in even 10 kHz increments; i.e.: 510, 520, 530, ... , 1800 kHz in the United States and Canada. Elsewhere, channels are spaced in 9 kHz increments, i.e.: 504, 513, 522, etc.

The FM broadcast band in the United States extends from 88 to 108 MHz. Channels are assigned at 100 kHz increments; i.e.: 88.1, 88.2, 88.3, ... , 107.9. The channels from 88.1 to 91.9 are reserved for noncommercial educational stations. Outside the United States and Canada, the boundaries and channel spacing vary. In Japan, the band starts at 76 MHz. In Western Europe, the band generally runs from 88-108 MHz, but channels can be irregularly spaced, i.e.: 101.25 MHz.
**AIR (Aircraft) Bands**

The AM VHF aeronautical communications band lies between 108.000 MHz and 136.975 MHz. This frequency spectrum can be divided into a lower and upper range. The lower range between 108.000 MHz and 118.000 MHz is primarily used for navigational aids such as the ILS - Instrument Landing Systems, DME - Distance Measuring Equipment, and VOR's - Very High Frequency Omni Range. The lower range offers very little in the way of voice communications, it does however provide someone with a working knowledge of Morse code the opportunity to identify various beacons. The upper range of the aeronautical band 118.000 MHz to 136.975 MHz is where the majority of voice communications can be monitored. Communications in the VHF band are transmitted in AM mode and most if not all compatible receivers automatically default to this mode. Frequencies within the aeronautical range are spaced in increments of 25 kHz, as such you will find transmissions at 118.000, 118.025, 118.050 MHz etc.

The frequency(s) you monitor will determine the nature of traffic you will hear. As previously mentioned frequencies in the lower range of the aeronautical band are mostly occupied by navigational equipment and transmit non-voice signals in Morse code. If you select a frequency in the upper range the air is suddenly filled with conversations between pilots and air traffic controllers, pilots and their company dispatchers, flight service stations, and ATIS broadcasts. Frequencies within the aeronautical band are designated according to their usage.

Refer to page 18 for operation.

4. GETTING STARTED

Lithium ion (Li-ion) batteries pack high energy density in a tiny package. Other than higher power and lower weight, li-ion batteries are user friendly as well. Unlike its predecessor, the nickel-cadmium, lithium-ion batteries do not suffer from the “memory effect.” That is, the battery does not have to be fully discharged before being recharged.

Though the batteries do not suffer from the memory effect, it is just the opposite that users should be wary of. Lithium ion batteries shouldn’t be run all the way down before charging; they respond much better with constant recharges.

To prolong the battery when not in use, store it in a cool dry place at approximately 40 percent capacity. Also, avoid exposing a lithium ion battery to extreme temperatures for prolonged periods of time, and recharge constantly when in use.

4.1 BATTERIES AND CHARGERS

The FNB-V98LI is a high performance Lithium-Ion battery providing high capacity in a compact package.

**CAUTION**

To avoid risk of explosion and injury, FNB-V98LI battery pack should only be removed, charged or recharged in non-hazardous environments.

4.1.1 BATTERY SAFETY

Battery packs for your transceiver contain Lithium-Ion batteries. This type of battery stores a charge powerful enough to be dangerous if misused or abused, especially when removed from the transceiver. Please observe the following precautions:

**DO NOT SHORT BATTERY PACK TERMINALS:** Shorting the terminals that power the transceiver can cause sparks, severe overheating, burns, and battery cell damage. If the short is of sufficient duration, it is possible to melt battery components. Do not place a loose battery pack on or near metal surfaces or objects such as paper clips, keys, tools, etc. When the battery pack is installed on the transceiver, the terminals that transfer current to the transceiver are not exposed. The terminals that are exposed on the battery pack when it is mounted on the transceiver are charging terminals only and do not constitute a hazard.
DO NOT INCINERATE: Do not dispose of any battery in a fire or incinerator. The heat of fire may cause battery cells to explode and/or release dangerous gases.

Battery Maintenance
For safe and proper battery use, please observe the following:
• Battery packs should be charged only in non-hazardous environments;
• Use only STANDARD HORIZON-approved batteries;
• Use only a STANDARD HORIZON, (a Marine Division of VERTEX STANDARD) approved charger. The use of any other charger may cause permanent damage to the battery.
• Follow charging instructions provided with the chargers.
• Keep the battery contacts clean.

Battery Storage
Store batteries in a cool place to maximize storage life. Since batteries are subject to self-discharge, avoid high storage temperatures that cause large self-discharge rates. After extended storage, a full recharge is recommended.

When a battery pack is not used for a long time, please remove it from the transceiver. Also, while in storage, the charge will drain slightly over time and the battery should be recharged 50% every six months.

Battery Recycling
DO NOT PLACE USED BATTERIES IN YOUR REGULAR TRASH! LITHIUM-ION BATTERIES MUST BE COLLECTED, RECYCLED OR DISPOSED OF IN AN ENVIRONMENTALLY SOUND MANNER.
The incineration, land filling or mixing of Lithium-Ion batteries with the municipal solid waste stream is PROHIBITED BY LAW in most areas.

Return batteries to an approved Lithium-Ion battery recycler. This may be where you purchased the battery.

Contact your local waste management officials for other information regarding the environmentally sound collection, recycling and disposal of Lithium-Ion batteries.
4.1.2 BATTERY CHARGING

If the radio has never been used, or its charge is depleted, it may be charged by connecting the CD-36 Charger Cradle with the NC-90 battery charger, as shown in the illustration.

When the battery pack is inserted correctly, the LED indicator on the CD-36 Charger Cradle will glow red. When charging is completed, the LED indicator will change to green.

*Note:* The radio may be kept in the charging cradle when the radio is turned off. It is not recommended to use the radio while it is in the charger.

If 12V DC power is available, the supplied E-DC-19A DC Cable with 12 V Cigarette Lighter Plug or the optional E-DC-6 DC Cable may be used for charging the battery. The NC-90, E-DC-19A and E-DC-6 will charge a completely discharged FNB-V98LI battery pack in about 8 hours.

4.1.3 BATTERY INSTALLATION/REMOVAL

1. Turn the transceiver off.
2. To install, insert the battery pack into the battery compartment on the back of the transceiver, then close the Battery Pack Latch until it locks in place with a "click."

3. To remove, open the Battery Pack Latch on the bottom of the transceiver, then slide the battery downward and out from the transceiver.
4.1.4 USING THE CD-36 CHARGER CRADLE
1. Turn the transceiver off.
2. Insert the DC plug from the NC-90 into the DC jack on the CD-36 side panel, then plug the NC-90 into the AC line outlet.
3. Insert the HX600S (with the battery pack) into the CD-36; the antenna should be at the left side when viewing the charger from the front.
4. If the HX600S is inserted correctly, the Red indicator on the CD-36 will glow. A fully-discharged pack will be charged completely in approximately 8 hours.
   **Important Note:**
   Do not leave the charger connected to the transceiver for continuous periods in excess of 24 hours. Long term overcharging can degrade the Lithium-Ion battery pack and significantly shorten its useful life.
5. When charging is completed, disconnect the pack from the CD-36, and unplug the NC-90 from the AC line outlet.

4.1.5 MOUNTING THE CD-36 ON THE VESSEL
The CD-36 is designed to be surface on a vessel which can be connected to the charger and a GPS that supplies NMEA data for DSC Distress transmissions.

If mounting on a vessel, the CD-36 must be mounted in a location on the vessel that is directly shielded from rain or splashes of water. After the location is found, mount the CD-36 using the supplied mounting screws.
4.2 CONNECTING A GPS TO THE CD-36

The CD-36 is supplied with a cable that is designed to be connected to any GPS that has an NMEA Output with the GLL, GGA, GNS, or RMC sentences. Check with the owner’s manual of the GPS to confirm this information. The NMEA input cable on the CD-36 contains two wires, uses are shown below.

Blue – NMEA Input (Connects to NMEA Out of GPS)
Green – NMEA Negative (Connects to NMEA Negative or battery Ground of GPS)

If you have further inquiries, please feel free to contact us at:
Phone: (800) 767-2450
Fax: (888) 679-8046
Web site: standardhorizon.com
Email: marinetech@vxstdusa.com

To connect the GPS receiver, connect the wires between the CD-36 and the GPS. Insure that the wires are properly shielded from water. See the figure at the right for example of connection to STANDARD HORIZON GPS CHART PLOTTER.
5. CONTROLS AND SWITCHES

NOTE
This section defines each control of the transceiver. For detailed operating instructions, refer to section 6 "BASIC OPERATION." Refer to illustrations for the location of the following controls, switches, and connections.
1 VOLUME CONTROL
Turn this control clockwise to increase the volume.

2 MIC/SP JACK
The jack accepts the optional CMP460 Speaker/Microphone, MH-57A4B Mini Speaker/Microphone, VC-24 VOX Headset or VC-27 Earpiece/Microphone. When this jack is used, the internal speaker is disabled.

3 ANTENNA CONNECTOR
The supplied CAT460 flexible antenna is attached here.

4 PUSH-TO-TALK (PTT) SWITCH
When pushed activates the transmitter.

5 SQUELCH (SQL) SWITCH
Sets the point at which random noise on the channel will not activate the audio circuits but a received signal does. This point is called the Squelch threshold. Further adjustment of the squelch control will degrade the reception of wanted transmissions. To quickly open the squelch and monitor a channel before transmitting, press and hold this key for 3 seconds.

6 POWER SWITCH
Press and hold in this switch for 2 seconds to toggle the transceiver’s power “on” and “off.”

7 [▲(UP)] KEY
Press to select a desired channel. Each press increases the channel number. When held down, the channels increase continuously.

8 [▼(DOWN)] KEY
Press to select a desired channel. Each press decreases the channel number. When held down, the channels decrease continuously.

9 [BAND] KEY
Press to select the VHF Marine, AM Broadcast, FM Broadcast, and AIR (aircraft) bands.

10 MICROPHONE
The internal microphone is located here.

11 NMEA TERMINAL
Connect to GPS receiver that outputs NMEA sentences GLL, GGA, GNS, and RMC via the CD-36 Charger Cradle. Keep these terminals clean.
12 **[16/9] KEY**
Immediately recalls channel 16 from any marine channel or band location. Holding down this key recalls channel 9.

13 **[WX] KEY**
Immediately recalls the last-used NOAA Weather Channel from any channel location. Recalls the previously-selected working channel when the [WX] key is pressed again.

*Secondary use:*
When the [16/9] key is held *and* the [WX] key is pressed, the radio will change the marine channel between the USA, International, and Canadian channels.

14 **[H/L] KEY**
On the Marine Band, changes the transmitter output power between High (5 Watts), Medium (2.5 Watts), and Low (1 Watt). Does not operate on “Low power only” and transmission-inhibit channels.

When operating on Canadian channel 13, or USA channels 13 or 67, pressing this key momentarily toggles the power level from Low power to medium or High power.

*Secondary use:*
Hold down this key to lock the keypad (except the PTT, SQL, and [H/L] keys) so that they are not accidentally changed. The key lock symbol ‘LOCK’ will appear on the LCD, to indicate that the functions are locked. Hold down until the key lock symbol ‘LOCK’ disappears to unlock the radio.

15 **[SCAN] KEY**
Starts scanning and priority scanning of programmed channels. When scanning, press and hold this key to turn on and off priority scan (P is shown on the display during Priority scanning).

16 **[PRESET] KEY**
Immediately recalls one of up to 10 user preset memories for each band (shown as 0-9 on the LCD). Pressing this key repeatedly scrolls through the preset memory channels.
17 [MEM] KEY
Press this key to memorize the selected channel for scanning. When pressed a “MEM” icon will be shown on the LCD display indicating the channel has been saved to scan memory. The scan memory is only used with the Marine and WX channels.
To delete the channel from scan memory, select the channel and press this key until “MEM” is removed from the display.

18 BUSY/TX INDICATOR
This indicator illuminates different colors depending on the band that is selected. The chart to the right shows the colors illuminated when the signal is received. This indicator glows red during transmit.
When the Emergency feature is activated, this indicator blinks the internationally-recognized Morse Code “S.O.S.” message.

19 [DISTRESS] KEY
When radio is programmed with a MMSI and this key is pressed once and pressed and held again for 3 seconds the radio will transmit a DSC Distress Call. To send the distress call, see section 7.10 “DIGITAL SELECTIVE CALLING.”

6. BASIC OPERATION

6.1 INITIAL SETUP
1. Install the battery pack on the transceiver (see section 4.1.3 “BATTERY INSTALLATION/REMOVAL”).
2. Install the antenna onto the transceiver.
   
   NOTE: Water resistance of the transceiver is assured only when the battery pack and antenna are attached to the transceiver and MIC/SP rubber cap is installed in the MIC/SP jack.

6.2 RECEPTION
1. Press and hold in the POWER switch for two seconds to turn the transceiver on.
2. Press the SQL switch, then press the [▼] key until the SQL level is 00. This state is known as “Squelch Off.”
3. Turn up the VOLUME CONTROL knob until the noise or audio from the speaker is at a comfortable level.
4. Select the desired operating band among the VHF Marine band, FM band, AM band, and AIR band by pressing the [BAND] key repetitively to switch between the bands.
5. Press the [▲] or [▼] key to select a channel or frequency that has no signal being received (no one is transmitting on the channel) and where only noise is heard.
6. Press the SQL switch, then press the [▲] key and stop immediately after the noise disappears. This condition is known as the “Squelch Threshold.” If the squelch is set to a higher level, weak signals may not be received. No noise or no signal is heard until a signal is received that exceeds the squelch threshold. Sometimes, a slight adjustment of the squelch threshold is needed, as some channels have a higher noise level than others.
   
   NOTE: To quickly open the squelch and monitor a channel before transmitting, press and hold this key for 3 seconds.
7. Press the [SCAN] key momentarily to channel the scanning. Refer to section 7.2 for programming channels into scan memory.
8. Please refer to section 13 for VHF Marine channel assignments.
9. The LCD and keypad are illuminated for 5 seconds when any key is pressed. The lamp automatically turns off in about 5 seconds.
10. To “lock” the channel so that it is not accidentally changed, hold down the
[H/L] key for about one second. This locks the [▲] and [▼] keys and all the front panel controls except the [H/L], PTT and SQL keys. The ‘On’ symbol will appear on the display to indicate that the keypad is locked. Hold down the [H/L] key for about one second to unlock the keys. The ‘On’ symbol will disappear from the display.

6.3 TRANSMISSION
1. Perform steps 1 through 6 of the RECEPTION discussion above.
2. Before transmitting, monitor the channel and make sure it is clear.
   
   THIS IS AN FCC REQUIREMENT!

3. For communications over short distances on the Marine band, press the [H/L] key until ‘L’ is displayed on the LCD. This indicates Low power (approximately 1 watt).

   Note
   Transmitting on 1 watt prolongs battery life. Low power (1 watt) should be selected whenever possible.

4. If using Low power is not effective, select Medium power (2.5 watts) or High power (5 watts) by pressing the [H/L] key until ‘M’ (Medium power) or ‘H’ (High power) is displayed.

5. When receiving a signal, wait until the incoming signal stops before transmitting. The transceiver cannot transmit and receive simultaneously.

6. Press the PTT (Push-To-Talk) switch to transmit. The ‘TX’ indicator is displayed during transmission.

7. Speak slowly and clearly into the microphone. Hold the microphone about 1/2 to 1 inch away from your mouth.

8. When the transmission is finished, release the PTT switch.

For an overview of VHF Marine band operating procedures refer to section 3.

6.3.1 TRANSMIT TIME - OUT TIMER (TOT)
While the PTT switch is held down, transmission time is limited to 5 minutes. This prevents prolonged (unintentional) transmissions. About 10 seconds before automatic transmitter shutdown, a warning beep sounds from the speaker. The transceiver automatically switches to the receiving mode, even if the PTT switch is held down. Before transmitting again, the PTT switch must first be released, and then pressed again. This Time-Out-Timer (TOT) prevents a continuous transmission that would result from an accidentally stuck PTT switch.
6.4 NOAA WEATHER CHANNELS

1. To receive a NOAA weather broadcast, press the [WX] key. The transceiver changes to the weather channel mode. This mode consists of a special preset memory bank containing the NOAA weather channels.

2. The transceiver will be set to the last used NOAA weather channel. Press the [▲] or [▼] key to change to other weather channels.

3. To exit from the weather channel mode press the [WX] key. The transceiver will revert to the channel you were using prior to switching to the weather channel mode.

6.4.1 NOAA WEATHER ALERT

In the event of extreme weather disturbances such as storms and hurricanes, NOAA (National Oceanic and Atmospheric Administration) sends a "weather alert" consisting of a 1050 Hz tone, followed by weather reports on the weather channels. The transceiver is capable of receiving this alert if the following is performed:

1. Program your area’s weather channels into the transceiver’s scan memory. Follow the same procedure as for regular channels under section 7.2.

2. Press the [SCAN] key to start the scan.

3. The memorized weather channels are scanned along with the regular memorized channels. Scanning will not stop on the (continuous) weather broadcast channels unless the weather alert tone is received.

4. When an alert is received on a weather channel, scanning stops and the transceiver emits a beeping tone that will stay on for 5 minutes or until the user presses the [WX] key to listen to the Weather Alert.
6.4.2 SPECIFIC AREA MESSAGE ENCODING (SAME)

In addition to the NOAA Weather Alert, the HX600S is able to receive and display NOAA Weather Radio (NWR) SAME Messages. NOAA SAME broadcasts include warnings and post-event information for all types of hazards - including natural (such as earthquakes or avalanches), environmental (such as chemical releases or oil spills), and public safety (such as AMBER alerts or 911 Telephone outages).

**NOTE:** NOAA Weather Radio service to a county depends on reliable signal reception, which typically extends in about a 40-mile radius from the transmitter, assuming level terrain. Some counties or parts of counties that are in mountainous areas and are listed as having NWR coverage may not have reliable reception in some locations due to signal blockages and/or excessive distance from the transmitter.

**Programming NOAA SAME area(s) codes**

Refer to section 10. MENU ("SET") MODE, nA1 - nA6 (NOAA Weather SAME Area 1 - 6)

**Operation**

The HX600S can receive and display SAME messages only when the Weather channel in your area is selected and the SAME code is programmed. When a message is received the display will show the Nature of Activation and the level as shown in the table below.

1. Press the [WX] key and select the WX channel using the [▲] or [▼] keys.
2. Adjust the volume control to a comfortable listening level.
3. When a warning signal is received on a weather channel, the HX600S display will show the Nature of Activation and level.

4. The HX600S will emit a beeping tone that will stay on for 5 minutes or until the user presses the any keys to listen to the Weather Alert.

EAS Event (NWR-SAME) Codes
6.5 PRESET CHANNELS (0 ~ 9): INSTANT ACCESS
The HX600S provides ten Preset channels for each individual operating band (VHF Marine, AM Broadcast, FM Broadcast and Air Band).

Programming
1. Select the desired band by pressing the [BAND] key.
2. Hold down the [Preset] key, and press the [▲] or [▼] key (repeatedly, if necessary) until the desired channel number or frequency is displayed.
3. With the desired number displayed, release the [Preset] key.
4. Repeat steps 2 and 3 to program the desired channels into Preset Channels “0” ~ “9.”
5. To delete a Preset Channel, hold down the [Preset] key and press the [▲] or [▼] key until the Preset Channel number to be deleted is displayed, then release the [Preset] key.

Operation
Pressing the [Preset] key will toggle between Preset Channels “0” - “9” and the last selected “regular” channel. Preset Channel “0” is represented by “0” to the right of the channel number on the LCD for 1 second, and preset channel “1” is represented by “1” and so forth. The preset channel number will disappear after a few seconds.

Note: You may add an alphanumeric name “Tag” to any desired Preset Channel; refer to CH NAME SET item on the section 10 "MENU ("SET") MODE.”

6.6 ENABLING S.O.S. STROBE OPERATION
The S.O.S. STROBE feature utilizes the high-intensity strobe LED on the front of the HX600S as a visual distress beacon. When enabled, the LED blinks the internationally recognized Morse Code “S.O.S.” message (•••––– •••) at a rate of 5 words per minute. This can be very useful in summoning help from rescuers who may not be able to communicate with you via radio.

1. Hold down the [MEM] key while turning the radio on to activate the emergency S.O.S. Strobe. Once the radio comes on, the BUSY/TX LED will flash the Morse Code S.O.S. message repeatedly.
2. The S.O.S. strobe function is interrupted when a signal is received or if the squelch control is turned so audio is heard from the speaker. and during transmission.
3. To disable the S.O.S. strobe function, turn the radio off and back on again.
7. ADVANCED OPERATION ON THE MARINE BAND

7.1 USA, CANADIAN, AND INTERNATIONAL CHANNELS
1. To change from US to Canadian or International Marine Channels, hold down the [16/9] key and press the [WX] key. The band will change from USA, to International, and to Canadian with each press.
2. “USA” appears on the LCD for the USA band, “INTL” appears for the International band, and “CAN” appears for the Canadian band.
3. Refer to the marine channel charts in section 13 “VHF MARINE CHANNEL ASSIGNMENTS” for allocated channels.

7.2 MEMORY SCAN
The HX600S can be programmed to scan channels from a minimum of 2 channels up to all channels in the marine band. If an incoming signal is detected on one of the channels during scan, the radio will pause on that channel, allowing you to listen to the incoming transmission.
1. Press the SQL switch then the [▲] or [▼] key until the background noise from the speaker is turned off.
2. Select the desired channel to be included in the scan memory using the [▲] or [▼] key.
3. Press the [MEM] key to store the channel into the transceiver’s scan memory. “MEM” will be displayed on the LCD.
4. Repeat steps 1 and 2 for all the channels to be scanned.
5. To delete a channel from the transceiver’s scan memory select the memorized channel. Press the [MEM] key, “MEM” indication will be removed from the display.
6. To start scanning, press the [SCAN] key. The scan proceeds from the lowest to the highest programmed channel and stops scanning when a transmission is received. Scanning will resume when the incoming signal disappears at the end of the transmission. A small “SCAN” icon is shown on the display during scanning.
7. To stop the scan, press the [SCAN] key.
7.3 PROGRAMMABLE PRIORITY SCAN
The priority scanning feature allows the radio to scan while also keeping watch on a particularly important “priority channel.” The following channels can be set as the priority channel: 16, 09, and MARINE Preset Channel.

1. To set the priority channel, hold down the [16/9] key and press the [MEM] key. The channel will change from 16 to 09 to Preset Channels 0 through 9 with each press of the [MEM] key. When the [16/9] key is released the displayed channel will be set as the priority channel (the large “P” icon will appear at the left side of the channel number).

2. For priority scanning, hold down the [SCAN] key during normal scanning. Scanning will proceed between the memorized channels and the priority channel. The priority channel will be scanned after each programmed channel. “P” is shown on the left side of the channel number during priority scanning.

3. As an example of priority scanning, let us say that marine channels 06, 07, and 08 are memorized in the transceiver’s scan memory. Priority scanning will proceed in the following sequence:

   [CH06] ⇒ [Priority Channel] ⇒ [CH07] ⇒ [Priority Channel] ⇒ [CH08] ⇒ [Priority Channel] ⇒ [CH06] ⇒ [Priority Channel] ……

4. Even when the transceiver stops and listens to the signal of a programmed channel, the transceiver will shift to a “dual watch” mode between this channel and the priority channel. Therefore, your priority watching of the designated channel is not compromised when the scanner has paused on an active channel.

5. Hold down the [SCAN] key to change the priority scanning to normal scanning, and then press the [SCAN] key to stop the scan and return to normal operation.
7.4 DUAL WATCH
The Dual Watch feature allows the radio to watch for a transmission on the priority channel and another selected Marine channel until a signal is received. The priority channel is determined in section 7.3 "PROGRAMMABLE PRIORITY SCAN".

1. To start the Dual Watch feature, select a channel to be dual watched with the priority channel and press and hold the [SCAN] key. The radio checks the priority channel for voice traffic every one second. A small "DW" icon is will be shown blinking on the left of the display during scanning.

2. To cancel the Dual Watch feature, press the [SCAN] key.

7.5 TRI WATCH
Note: To use this function the radio must be setup to enable the Tri-watch function. Refer to Section 10 "MENU ("SET") MODE".

The TRI Watch feature allows the radio to watch for a transmission on the priority channel, and the secondary calling channel (channel 09) and another selected Marine channel until a signal is received. The priority channel is determined per the discussion in section 7.3 "PROGRAMMABLE PRIORITY SCAN".

1. To start the TRI Watch feature, select a channel and press and hold the [SCAN] key. The radio checks the priority channel, CH09 and the selected channel for voice traffic. A small "DW" icon is will be shown blinking on the left of the display during scanning.

2. To cancel the TRI Watch feature, press the [SCAN] key.

7.6 EMERGENCY CHANNEL 16
1. To select the emergency channel, press the [16/9] key from any channel.

2. If you cannot contact anyone on channel 16, switch to another channel.

3. See section 9.1 "EMERGENCY (CHANNEL 16 USE)" for additional emergency operating practices.

4. To recall the previously-used channel when you are finished on channel 16, press the [16/9] key again.
7.7 CHANNEL 9
Channel 9 is used as a hailing channel for initial, non-emergency contacts with other vessels. Hold down the [16/9] key for 1 second to select channel 9. You should change to a working channel, after contact is established (so as to keep the hailing channel clear for other users).

7.8 OPERATING ON USA OR CANADIAN 13, OR USA CHANNEL 67
USA and Canadian Channel 13, USA 67 are used at docks, bridges and for maneuvering in port. Messages on this channel must concern navigation only, such as meeting and passing in restricted waters. In emergencies and when approaching blind river bends, high power is allowed. Pressing the [H/L] key will change the power output from 1 Watt (L) to 5 Watts (H); if pressed again, 2.5 Watts (M) will be selected. When the PTT switch is released, the transceiver will revert to Low power. Press the [H/L] key again if you need High power on a subsequent transmission.

7.9 OPERATING ON USA CHANNEL 67
USA Channel 67 is used for navigational bridge-to-bridge traffic between ships. This channel has been allocated for temporary high power transmission if communication is not able to be established on one watt.

Select Channel 67, then press the [H/L] key to set the transmitter output to either High or Medium power. When the PTT switch is released, the transceiver will revert to low power.
7.10 DIGITAL SELECTIVE CALLING

7.10.1 GENERAL

7.10.1.1 Digital Selective Calling (DSC)

Digital Selective Calling is a semi-automated method of establishing a radio call; it has been designated by the International Maritime Organization (IMO) as an international standard for establishing VHF, MF and HF radio calls. It had also been designated as part of the Global Maritime Distress and Safety System (GMDSS). It is planned that DSC will eventually replace aural watches on distress frequencies and will be used to announce routine and urgent maritime safety information broadcasts.

The HX600S has a DSC Distress feature that allows mariners to instantly transmit a VHF Marine distress call with GPS position (when connected to the transceiver) to the US Coast Guard and other vessels within range of the transmission.

7.10.1.2 Maritime Mobile Service Identity (MMSI)

What is an MMSI?

An MMSI is a nine-digit number used on Marine Transceivers capable of using Digital Selective Calling (DSC). This number is used by the HX600S when a Marine DSC Distress call is transmitted. This number is registered with the USCG. Refer to section 10 “MENU (“SET”) MODE” (MMSI REG).

NOTE: An MMSI must be programmed into the HX600S before the DSC Distress function will operate. If you have a fixed mounted DSC VHF and already have a MMSI, this MMSI should be programmed into the HX600S.

How can I obtain a MMSI assignment?

Currently there are two companies that offer MMSI numbers:

- Boat US at (800) 563-1539 or visit the web site http://www.boatus.com/mmsi/
- Seatow at (631) 765-3660 or visit the web site http://www.seatow.com/mmsiinfo.htm

WARNING: This radio is designed to generate a digital maritime distress and safety call to facilitate search and rescue. To be effective as a safety device, this equipment must be used only within communication range of a shore-based VHF marine channel 70 distress and safety watch system.
7.10.2 SENDING A DISTRESS CALL
The distress call automatically includes the vessel’s DSC MMSI and Lat/Lon position. The vessel’s position will only be transmitted if the transceiver is properly connected to an operating GPS receiver with NMEA output.

1. Lift the red DISTRESS rubber cover on the right side of the transceiver and press the [DISTRESS] key. “DSC DISTRESS” will appear on the LCD.
2. Press and hold in the [DISTRESS] key for 3 seconds. The LCD will count down (3s, 2s, 1s), and afterwards the HX600S will transmit the DSC Distress Call on channel 70.
3. When the distress signal is being sent, “TX” icon will appear on the LCD. After the message has been sent, the Distress Alarm will sound.
4. The transceiver received for a transmission CH16 until an acknowledgment signal is received.
5. If no acknowledgment is received, the distress call is repeated in three minute intervals until an acknowledgment is received.
6. To cancel the distress call alarm, press the [16/9] key.
7. To send the CANCEL call:
   Press the [DISTRESS] key, then press the [▲] or [▼] key until “CANCEL” is shown on the LCD. Press the [DISTRESS] key.

**NOTE:** When a GPS receiver with NMEA output is connected via the CD-33 Charger Cradle, the vessel's position is automatically transmitted with the distress call. The HX600S will remember the position input from the GPS until the radio is turned off.

7.11 SIMPLEX/DUPLEX CHANNEL USE
All Marine channels are factory-programmed in accordance with FCC (USA), Industry Canada and International regulations. The mode of operation cannot be altered from simplex to duplex or vice-versa. Simplex (ship to ship) or duplex (marine operator) mode is automatically activated, depending on the channel and whether the USA, International or Canadian operating band is selected.
8. SCRAMBLER OPERATION

8.1 VOICE SCRAMBLER UNIT

The optional FVP-31 Voice Scrambler Unit permits secure voice communications with stations within your network, which prevents others from listening using normal communication equipment.

To activate the Voice Scrambler:

1. Turn the radio off.
2. Hold down the SQL switch, then turn on the transceiver while still holding down the SQL switch to enter the Setup Mode.
3. Press the SQL switch momentarily to select the Menu item (SCRAMBLER).
4. Press the [▲] or [▼] key momentarily select the scramble code (SC1, SC2, SC3, or SC4).
5. When you have completed your selection, press the SQL switch to save the new setting, and then press the PTT switch to exit to normal operation.
6. To disable the Voice Scrambler, select “oFF” in step 4 above.

Note: Voice Scrambler may not be activated on Marine Channels 16 and 70.

9. OPERATING PRACTICES

9.1 EMERGENCY (CHANNEL 16 USE)

Channel 16 is known as the Hail and Distress Channel. An emergency may be defined as a threat to life or property. In such instances, be sure the transceiver is on and set to CHANNEL 16. Then use the following procedure:

1. Press the microphone push-to-talk switch and say "Mayday, Mayday, Mayday. This is ___ ___ ___" (your vessel’s name).
2. Then repeat once: "Mayday, ___ " (your vessel’s name).
3. Now report your position in latitude/longitude, or by giving a true or magnetic bearing (state which) to a well-known landmark such as a navigation aid or geographic feature such as an island or harbor entry.
4. Explain the nature of your distress (sinking, collision, aground, fire, heart attack, life-threatening injury, etc.).
5. State the kind of assistance your desire (pumps, medical aid, etc.).
6. Report the number of persons aboard and condition of any injured.
7. Estimate the present seaworthiness and condition of your vessel.
8. Give your vessel’s description: length, design (power or sail), color and other distinguishing marks. The total transmission should not exceed 1 minute.
9. End the message by saying “OVER”. Release the microphone button and listen.
10. If there is no answer, repeat the above procedure. If there is still no response, try another channel.

9.2 CALLING ANOTHER VESSEL (CHANNEL 16 OR 9)
Channel 16 may be used for initial contact (hailing) with another vessel. However, its most important use is for emergency messages. This channel must be monitored at all times except when actually using another channel.

It is monitored by the U.S. and Canadian Coast Guards and by other vessels. Use of channel 16 for hailing must be limited to initial contact only. Calling should not exceed 30 seconds, but may be repeated 3 times at 2-minute intervals. In areas of heavy radio traffic, congestion on channel 16 resulting from its use as a hailing channel can be reduced significantly in U.S. waters by using Channel 9 as the initial contact (hailing) channel for non-emergency communications. Here, also, calling time should not exceed 30 seconds but may be repeated 3 times at 2-minute intervals.

Prior to making contact with another vessel, refer to the channel charts in this manual, and select an appropriate channel for communications after initial contact. For example, Channels 68 and 69 of the U.S. VHF Charts are some of the channels available to non-commercial (recreational) boaters. Monitor your desired channel in advance to make sure you will not be interrupting other traffic, and then go back to either channel 16 or 9 for your initial contact.

When the hailing channel (16 or 9) is clear, state the name of the other vessel you wish to call and then “this is” followed by the name of your vessel and your Station License (Call Sign). When the other vessel returns your call, immediately request another channel by saying “go to,” the number of the other channel, and “over.” Then switch to the new channel. When the new channel is not busy, call the other vessel.

After a transmission, say “over,” and release the microphone’s push-to-talk (PTT) switch. When all communication with the other vessel is completed, end the last transmission by stating your Call Sign and the word “out.” Note that it is not necessary to state your Call Sign with each transmission, only at the beginning and end of the contact.

Remember to return to Channel 16 when not using another channel. Some radios automatically monitor Channel 16 even when set to other channels or when scanning.
9.3 OPERATING ON CHANNELS 13 AND 67
Channel 13 is used at docks and bridges and by vessels maneuvering in port. Messages on this channel must concern navigation only, such as meeting and passing in restricted waters.

Channel 67 is used for navigational traffic between vessels.

By regulation, power is normally limited to 1 Watt on these channels. Your radio is programmed to automatically reduce power to this limit on these channels. However, in certain situations it may be necessary to temporarily use a higher power. See page 16 ([Hi/L] key) for means to temporarily override the low-power limit on these two channels.

9.4 NOAA WEATHER ALERT TESTING
In the event of a major storm or other appreciable weather condition requiring vessels at sea (or other bodies of water) to be notified, the NOAA (National Oceanographic and Atmospheric Administration) broadcasts a 1050 Hz tone that some VHF radios, including your HX600S, can detect for “Weather Alarm” purposes (refer to section 6.4.1 “NOAA WEATHER ALERT” for a discussion of how to use this feature). The 1050 Hz tone, when detected, will produce a loud beep in the speaker of the HX600S, to signal that a Weather Alert Broadcast is being received.

In order to test this system, NOAA broadcasts the 1050 Hz tone every Wednesday sometime between 11 AM and 1 PM local time. You may use this opportunity to test your HX600S periodically to confirm that the Weather Alert feature is working, or for training crewmembers on how to configure the HX600S to receive the NOAA Weather Alerts.
10. MENU (“SET”) MODE

The Menu Mode allows a number of the HX600S operating parameters to be customized.

1. Turn the transceiver off.
2. Hold down the SQL switch, then turn on the transceiver while still holding down the SQL switch.
3. “SET” will appear on the display, indicating that the Setup Mode has been activated.
4. Press the the SQL switch to select the Menu item to be adjusted.
5. Press the [▲] or [▼] key to select the status or value of the Menu item.
6. After completing your adjustment, press the SQL switch to save the new setting, and then press the PTT switch to exit to normal operation.

**BEP (KEY BEEP)**

Function: Enable/Disable the Keypad beep.
Available Values: ON / OFF
Default: ON

**CHF (CHANNEL FREQUENCY)**

Function: Enable/Disable the Channel Frequency display.
Available Values: ON / OFF
Default: OFF

**CHn (CH NAME SET)**

Function: Changes the channel name shown on the display.
1. Select the channel on which you wish to change the name before recalling this Menu item.
2. Turn the transceiver off.
3. Hold down the SQL switch, then turn on the transceiver while still holding down the SQL switch.
4. “SET” will appear on the display, indicating that the Setup Mode has been activated.
5. Press the SQL switch to select this Menu item “CHn”.
6. Press the [▲] or [▼] key to select the first character (letter, number, or symbol) in the name you wish to change, then press the [MEM] key to move to the next character.
7. If you make a mistake, press the [H/L] key to move back, and then reselect the correct letter, number, or symbol.
8. Repeat step 6 as many times as necessary to complete the name tag (up
9. After completing your adjustment, press the SQL switch to save the new setting.

10. Press the PTT key to exit to normal operation.

**dUL (DW DISPLAY)**

*Function*: Selects the Dual Watch scanning display mode.

*Available Values*: Normal / Special

*Default*: Special

When "Special" is selected the channel shown on the display is the last channel the HX600S received a call on. This is a handy feature if you cannot look at the radio the moment a transmission was received.

**LP (LAMP MODE)**

*Function*: Selects the Lamp illumination method for the LCD and Keypad.

*Available Values*: Key / oFF / Cnt

*Default*: Key

Key: Illuminates the LCD/Keypad for 5 seconds when any key is pressed.

oFF: Disables the LCD/Keypad illumination.

Cnt: Illuminates the LCD/Keypad continuously.

**SnL (SCAN LAMP)**

*Function*: Enable/Disable the automatic illumination of the lamp when a signal is received on a channel during Scanning.

*Available Values*: ON / OFF

*Default*: OFF

**Scn (SCAN DISPLAY)**

*Function*: Selects the display mode while scanning.

*Available Values*: Normal / Special

*Default*: Normal

When this menu is set to "Normal," the channel numbers during scan will be shown scrolling on the display. When Special is selected the channel numbers on the display do not change unless a call was received. The channel shown is the last channel that was received.

**Scr (SCRAMBLER (Requires optional FVP-31))**

*Function*: Enable/Disable the Voice scrambler.

*Available Values*: ON / OFF

*Default*: OFF

*Note*: This Menu Item is ignored when using Marine Channels 16 and 70.
**dt (DUAL WATCH MODE)**
Function: Selects dual or tri-watch as desired.
Available Values: d- (Dual Watch) / t- (Tri Watch)
Default: d-

**dm (DIMMER)**
Function: Setting of the Display brightness level.
Available Values: 00 / 01 / 02 / 03
Default: 02

**PC (AUDIO PITCH CONTROL)**
Function: This control changes the speaker audio to have a high or lower sounding pitch to assist listening in quiet or noisy environments.
Available Values: ON / OFF
Default: OFF

**SOS (STROBE)**
Function: Selects the S.O.S. STROBE illumination from Continuously on to SOS strobe.
Available Values: Continue / SOS
Default: SOS

**Sp (AM STEP)**
Function: Selects the AM Band frequency step size.
Available Values: 10kHz or 9kHz (for Europe)
Default: 10kHz

**rEg (MMSI REG)**
Function: Stores MMSI ID code.
Note: The MMSI can only be inputted twice. If entered more than twice, the HX600S will have to be sent to STANDARD HORIZON factory service to reset the MMSI.

**nA1 - nA6 (NOAA Weather SAME Area 1 - 6)**
Function: Stores NOAA Weather SAME AREA code.
The HX600S is capable of being programmed with 6 areas or your choice to receive SAME messages. To enable the SAME function the HX600S must be programmed with a 6 digit SAME code for the state and county you want to receive alerts. After the code(s) are programmed the HX600S will ONLY respond to messages encrypted with the specific state/county that has been programmed.
1. Visit http://www.nws.noaa.gov/nwr/indexnw.htm and choose the SAME code in the state and county of the coverage area.

Example:

<table>
<thead>
<tr>
<th>COUNTY/CITY/AREA</th>
<th>SAME #</th>
<th>NWR TRANSMITTER</th>
<th>FREQ.</th>
<th>CALL SIGN</th>
<th>WATTS</th>
<th>REMARKS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Los Angeles</td>
<td>006037</td>
<td>Los Angeles, CA</td>
<td>162.55</td>
<td>KWO37</td>
<td>300</td>
<td></td>
</tr>
</tbody>
</table>

2. Turn the transceiver off.
3. Press and hold the SQL switch, then press and hold the POWER switch until the display turns on and shows “SEtSEtSEtSEtSEt”.
4. Press the SQL switch until “nA1” is shown.
5. Press the [▲] or [▼] key to select the digit in the SAME code; press the [MEM] key to set the number and step to the next position.
6. Repeat step 5 until all numbers are programmed. If you make a mistake, press the [H/L] key to move back to the digit and repeat step 5.
7. After completing your adjustment, press the SQL switch to save the new setting.
8. Press the PTT key to exit to normal operation.
11. INSTALLATIONS OF OPTION

11.1 FVP-31 VOICE SCRAMBLER UNIT
1. Make sure that the transceiver is off. Remove the battery pack.
2. Locate the connector for the optional unit under the caution seal in the battery compartment on the back of the transceiver; just peel off the caution seal.
3. Align the connector on the FVP-31 with the transceiver's connector and gently press the unit into place.
4. Place the Sponge Sheet (supplied with the HX600S) on the FVP-31.
5. Affix the new caution seal (supplied with the FVP-31), and replace the battery. Installation is now complete.

11.2 FBA-25A Alkaline BATTERY Tray
FBA-25A is a battery case that holds six alkaline batteries and is used with the HX600S transceiver.
1. Slide the batteries into the FBA-25A with the Negative [-] side of the batteries touching the spring connections inside the FBA-25A.
2. Insert the FBA-25A into the battery compartment on the back of the transceiver, then close the Battery Pack Latch until it locks in place with a "click."

Note: The battery indicator on the transceiver is only applicable to the FNB-V98LI rechargeable battery. Disregard this indication when using alkaline batteries.
12. MAINTENANCE

12.1 GENERAL
The inherent quality of the solid-state components in STANDARD HORIZON radios will provide many years of continuous use. Take the following precautions to prevent damage to the radio.

• Keep the microphone connected or the jack covered at all times to prevent corrosion of electrical contacts;
• Never key the transmitter unless an antenna or suitable dummy load is connected to the antenna receptacle.
• Ensure that the input voltage does not exceed the value specified in your Owner’s Manual.
• Use only STANDARD HORIZON-approved accessories and replacement parts.

12.2 REPLACEMENT PARTS
Occasionally an owner needs a replacement parts. These can be ordered from our Parts Department by writing or calling:

Marine Division of Vertex Standard
US Headquarters
10900 Walker Street, Cypress, CA 90630, U.S.A.
Telephone (714) 827-7600

Commonly requested parts, and their part numbers are listed below.
• VOLUME Knob: RA0778300
• CD-36 Charger Cradle: AAF73X001
• MIC/SP Cover: RA0768200
• DISTRESS Cover: RA0768100
• Belt Clip: AAE04X001

13. VHF MARINE CHANNEL ASSIGNMENTS

Tables on the following pages list the VHF Marine Channel assignments for U.S.A. and International use. Below are listed some data about the charts.

1. VTS. Where indicated, these channels are part of the U.S. Coast Guard’s Vessel Traffic System.

2. Alpha channel numbers, that is, channel numbers followed by the letter A (such as Channel 07A) are simplex channels on the U.S.A. or Canadian channel assignments whose counterparts in the International assignments are duplex channels. International channels do not use “alpha” numbers. If you call the Coast Guard on Channel 16, they will sometimes ask you to “go to channel 22 Alpha.” This is a channel assigned to U.S.A. and Canadian Coast Guards for handling distress and other calls. If your radio is set for International operation you will go to Channel 22 instead of 22A, and will not be able to communicate with the Coast Guard. To use Channel 22A, your radio must be set for USA or Canada operation, using the USA/CAN/INTL channel selection procedure described on page 28 of this manual. Channel 22 (without an “A”) is an International duplex channel for port operations. The HX600S displays an “A” adjacent to the channel number on all “Alpha” channels, unlike some other models that may not indicate the “A” even though they may be set to the correct frequency.

3. Bridge-to-Bridge channels (for example, Channel 13) are for use by bridge operators on inter-coastal waterways and rivers. It is also used by marine vessels in the vicinity of these bridges for navigation and for communicating with the bridge operators. Note that a limit of 1 Watt is specified for these channels.

4. The S/D column on the chart indicates either S (simplex) or D (duplex). Simplex means transmitting and receiving on the same frequency. Only one party at a time can talk, unlike a telephone. Be sure to say “over” and release your microphone push-to-talk switch at the end of each transmission. Duplex operation involves the use of one frequency for transmitting and a separate frequency for receiving. On channels specified as duplex on the charts, correct mode of operation is established automatically by your radio when you select a channel; you cannot change the mode. And you still must release the push-to-talk switch after each transmission in order to listen to the radio.

5. Channels normally used by recreational boaters are those that include
the term "non-commercial" in the Channel Use column of the chart. Some of these are shared with other users and some are used only in certain geographic regions.

6. Marine vessels equipped with VHF radios are required to monitor Channel 16.

The above **BOLD** channels are not for use of the general public in U.S. waters, unless proper authorization is given.
1: 156.050 MHz and 156.175 MHz are available for port operations and commercial communications purposes when used only within the U.S. Coast Guard designated Vessel Traffic Services (VTS) area of New Orleans, on the lower Mississippi River from the various pass entrances in the Gulf of Mexico to Devil's Swamp Light at River Mile 242.4 above head of passes near Baton Rouge.

2: 156.250 MHz is available for port operations communications use only within the U.S. Coast Guard designated VTS radio protection areas of New Orleans and Houston described in Sec. 80.383. 156.250 MHz is available for intership port operations communications used only within the area of Los Angeles and Long Beach harbors, within a 25- nautical mile radius of Point Fermin, California.

3: 156.500 MHz, 156.600 MHz and 156.700 MHz are available in the U.S. Coast Guard designated port areas only for VTS communications and in the Great Lakes available primarily for communications relating to the movement of ships in sectors designated by the St. Lawrence Seaway Development Corporation or the U.S. Coast Guard. The use of these frequencies outside VTS and ship movement sector protected areas is permitted provided they cause no interference to VTS and ship movement communications in their respective designated sectors.

</tbody>
</table>
4: Use of 156.875 MHz is limited to communications with pilots regarding the movement and docking of ships. Normal output power must not exceed 1 watt.

5: 156.375 MHz and 156.650 MHz are available primarily for intership navigational communications. These frequencies are available between coast and ship on a secondary basis when used on or in the vicinity of locks or drawbridges. Normal output power must not exceed 1 watt. Maximum output power must not exceed 10 watts for coast stations or 25 watts for ship stations.

6: On the Great Lakes, in addition to bridge-to-bridge communications, 156.650 MHz is available for vessel control purposes in established vessel traffic systems. 156.650 MHz is not available for use in the Mississippi River from South Pass Lighted Whistle Buoy “2” and Southwest Pass entrance Mid-channel Lighted Whistle Buoy to mile 242.4 above Head of Passes near Baton Rouge. Additionally, it is not available for use in the Mississippi River-Gulf Outlet, the Mississippi River-Gulf Outlet Canal, and the Inner Harbor Navigation Canal, except to aid the transition from these areas.

7: Use of 156.375 MHz is available for navigational communications only in the Mississippi River from South Pass Lighted Whistle Buoy “2” and Southwest Pass entrance Mid-channel Lighted Whistle Buoy to mile 242.4 above head of Passes near Baton Rouge, and in addition over the full length of the Mississippi River-Gulf Outlet Canal from entrance to its junction with the Inner Harbor Navigation Canal, and over the full length of the Inner Harbor Navigation Canal from its junction with the Mississippi River to its entry to Lake Pontchartrain at the New Seabrook vehicular bridge.

8: Within 120 km (75 miles) of the United States/Canada border, in the area of the Puget Sound and the Strait of Juan de Fuca and its approaches, 157.425 MHz is half of the duplex pair designated as Channel 88. In this area, Channel 88 is available to ship stations for communications with public coast stations only. More than 120 km (75 miles) from the United States/Canada border in the area of the Puget Sound and the Strait of Juan de Fuca, its approaches, the Great Lakes, and the St. Lawrence Seaway, 157.425 MHz is available for intership and commercial communications. Outside Puget Sound area and its approaches and the Great Lakes, 157.425 MHz is also available for communications between commercial fishing vessels and associated aircraft while engaged in commercial fishing activities.

9: When the frequency 156.850 MHz is authorized, it may be used additionally for search and rescue training exercises conducted by state or local governments.

10: The frequency 156.850 MHz is additionally available to coast stations on the Great Lakes for transmission of scheduled Coded Marine Weather Forecasts (MAFOR), Great Lakes Weather Broadcast (LAWEB) and rescheduled Notices to Mariners or Bulletins. F3C and J3C emissions are permitted. Coast Stations on the Great Lakes must cease weather broadcasts which cause interference to stations operating on 156.600 MHz until the interference problem is resolved.

11: The frequency 157.100 MHz is authorized for search and rescuetraining exercises by state or local government in conjunction with U.S. Coast Guard stations. Prior U.S. Coast Guard approval is required. Use must cease immediately on U.S. Coast Guard request.

12: The duplex pair for channel 20 (157.000/161.600 MHz) may be used for ship to coast station communications.

13: Available for assignment to coast stations, the use of which is in accord with an agreed program, for the broadcast of information to ship stations concerning the environmental conditions in which vessels operate, i.e., weather; sea conditions; time signals; notices to mariners; and hazards to navigation.

14: Available only in the Puget Sound and the Strait of Juan de Fuca.

15: The frequency 156.525 MHz is to be used exclusively for distress, safety and calling using digital selective calling techniques. No other uses are permitted.

16: The frequency 156.450 MHz is available for intership, ship and coast general purpose calling by noncommercial vessels, such as recreational boats and private coast stations.

17: The frequency 156.425 MHz is assigned by rule to private coast stations in Alaska for facsimile transmissions as well as voice communications.
14. WARRANTY

Marine Products Limited Warranty

PLEASE NOTE

The following “Limited Warranty” is for valid for products that have been purchased in the United States and Canada. For limited Warranty details outside the United States, contact the dealer in your country.

STANDARD HORIZON (a division of VERTEX STANDARD) warrants, to the original purchaser only, each new Marine Communications Product (“Product”) manufactured and/or supplied by STANDARD HORIZON against defects in materials and workmanship under normal use and service for a period of time from the date of purchase as follows:

Fixed Mount and Portable Transceivers
- 1 year - if purchased before 01/01/91
- 3 years - if purchased between 01/01/91 and 01/01/94
- 3 years Waterproof - if purchased after 01/01/94

Loud hailers
- 1 year - if purchased before 01/01/91
- 3 years - if purchased after 01/01/91

Associated Chargers
- 1 year - if purchased before 01/01/91
- 3 years - if purchased after 01/01/91

Associated Batteries - 18 months. Note: Batteries will be deemed defective only if storage capacity drops below 80% of rated capacity or if leakage develops.

To receive warranty service, the purchaser must deliver the Product, transportation and insurance prepaid, to STANDARD HORIZON (a division of VERTEX STANDARD). Include proof of purchase indicating model, serial number, and date of purchase. STANDARD HORIZON will return the Product to the purchaser freight prepaid. Products purchased prior to January 1, 1991 will bear the STANDARD HORIZON warranty terms in effect prior to that date.

In the event of a defect, malfunction or failure of the Product during the warranty period, STANDARD HORIZON’s liability for any breach of contract or any breach of express or implied warranties in connection with the sale of Products shall be limited solely to repair or replacement, at its option, of the Product or part(s)
therein which, upon examination by STANDARD HORIZON, appear to be defective or not up to factory specifications. STANDARD HORIZON may, at its option, repair or replace parts or subassemblies with new or reconditioned parts and subassemblies. Parts thus repaired or replaced are warranted for the balance of the original applicable warranty.

STANDARD HORIZON will not warrant installation, maintenance or service of the Products. In all instances, STANDARD HORIZON's liability for damages shall not exceed the purchase price of the defective Product.

This warranty only extends to Products sold within the 50 States of the United States of America and the District of Columbia.

STANDARD HORIZON will pay all labor to repair the product and replacement parts charges incurred in providing the warranty service except where purchaser abuse or other qualifying exceptions exist. The purchaser must pay any transportation expenses incurred in returning the Product to STANDARD HORIZON for service.

This limited warranty does not extend to any Product which has been subjected to misuse, neglect, accident, incorrect wiring by anyone other than STANDARD HORIZON, improper installation, or subjected to use in violation of instructions furnished by STANDARD HORIZON, nor does this warranty extend to Products on which the serial number has been removed, defaced, or changed. STANDARD HORIZON cannot be responsible in any way for ancillary equipment not furnished by STANDARD HORIZON which is attached to or used in connection with STANDARD HORIZON's Products, or for the operation of the Product with any ancillary equipment, and all such equipment is expressly excluded from this warranty. STANDARD HORIZON disclaims liability for range, coverage, or operation of the Product and ancillary equipment as a whole under this warranty. STANDARD HORIZON reserves the right to make changes or improvements in Products, during subsequent production, without incurring the obligation to install such changes or improvements on previously manufactured Products.

The implied warranties which the law imposes on the sale of this Product are expressly LIMITED, in duration, to the time period specified above. STANDARD HORIZON shall not be liable under any circumstances for consequential damages resulting from the use and operation of this Product, or from the breach of this LIMITED WARRANTY, any implied warranties, or any contract with STANDARD HORIZON. IN CONNECTION WITH THE SALE OF ITS PRODUCTS, STANDARD HORIZON MAKES NO WARRANTIES, EXPRESS OR IMPLIED AS TO THE MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR OTHERWISE, EXCEPT AS EXPRESSLY SET FORTH HEREIN.

Some states do not allow the exclusion or limitation of incidental or consequential damages, or limitation on how long an implied warranty lasts, so the above
limitations or exclusions may not apply. This warranty gives specific legal rights, and there may be other rights which may vary from state to state.

ONLY PRODUCTS SOLD ON OR AFTER JANUARY 1, 1991 ARE COVERED UNDER THE TERMS OF THIS LIMITED WARRANTY.

PRODUCT WARRANTY REGISTRATION

THANK YOU for buying STANDARD HORIZON (a division of Vertex Standard) products!

Please visit www.standardhorizon.com to register the HX600S Marine VHF. It should be noted that visiting the Web site from time to time may be beneficial to you, as new products are released they will appear on the STANDARD HORIZON Web site.

Product Support Inquiries

If you have any questions or comments regarding the use of the HX600S, you can visit the STANDARD HORIZON Web site to send an E-mail or contact the Product Support team at (714) 827-7600 ext 6300 M-F 7:00-5:00PST.

In addition to the warranty, STANDARD HORIZON includes a lifetime “flat rate” program to provide service after the warranty period has expired. If you wish to obtain the flat rate price for out-of-warranty repair, you must include the information on the Owner’s Record with the unit when you return it to your Dealer or to STANDARD HORIZON.

Lifetime Flat Rate Service Program: For the original Owner only, for the lifetime of the unit, STANDARD HORIZON will repair the unit to original specifications.

Note: The flat rate amount is payable by the Owner only if STANDARD HORIZON or the STANDARD HORIZON Dealer determines that a repair is needed. After the repair, a 90-day warranty will be in effect from the date of return of the unit to the Owner.

This service program is not available for equipment that has failed as a result of neglect, accident, breakage, misuse, improper installation or modification, or water damage (depending on the product).
15. SPECIFICATIONS

Performance specifications are nominal, unless otherwise indicated, and are subject to change without notice.

15.1 GENERAL

Frequency Ranges (MHz):
- 156 MHz - 163.275 MHz (Marine Band + WX Band)
- Channel Steps: 25 kHz
- 88 MHz - 108 MHz (FM Broadcast: Receive only)
- Channel Steps: 100 kHz
- 500 kHz - 1800 kHz (AM Broadcast: Receive only)
- Channel Steps: 10 / 9 kHz
- 108 MHz - 137 MHz (AIR Band: Receive only)
- Channel Steps: 25 kHz

Frequency Stability: ±10 ppm

(-4 °F to +140 °F [-20 °C to +60 °C])

Emission Type: 16K0G3E, 16K0G2B

Antenna Impedance: 50 Ohms

Supply Voltage: Nominal: 7.2 V DC, Negative Ground

(Battery Terminal)

Current Consumption:
- 170 mA (Receive)
- 50 mA (Standby)
- 1.45 A (5 W transmit)
- 1.0 A (2.5 W transmit)
- 0.6 A (1 W transmit)

Operating Temperature: –4 °F to +140 °F (–20 °C to +60 °C)

Case Size (W x H x D): 2.36” x 4.09” x 1.2” (60 x 104 x 30.5 mm)

w/o knob & antenna

Weight (Approx.): 10.6 oz. (300 g) with FNB-V98LI, Antenna

15.2 TRANSMITTER

RF Power Output (@7.4 V): 5, 2.5 or 1 W

Modulation Type: Variable Reactance

Maximum Deviation: ±5 kHz

Spurious Emission: At least 65 dB below

Microphone Impedance: 2 k-Ohm
15.3 RECEIVER

Circuit Type: Double-Conversion Superheterodyne (NFM, AM)  
Triple-Conversion Superheterodyne (WFM)

Intermediate Frequencies: NFM, AM  WFM
1st: 47.25 MHz  45.8 MHz
2nd: 450 kHz  10.7 MHz
3rd: –  1 MHz

Sensitivity: 0.2 μV for 12 dB SINAD (Marine Band)
0.2 μV for 12 dB SINAD (WX Band)
1 μV for 12 dB SINAD (FM Broadcast)
1 μV for 10 dB SN (AM Broadcast)
1 μV for 10 dB SN (AIR Band)

Adjacent Channel Selectivity: 65 dB Typical
Intermodulation: 65 dB Typical
Selectivity: 25 kHz (–60 dB) NFM / AM
300 kHz (–20 dB) WFM

AF Output (Internal speaker): 700 mW @ 16 Ohm for 10 % THD (@7.4 V)
This device complies with part 15 of the FCC rules. Operation is subject to the condition that this device does not cause harmful interference.

Part 15.21: Changes or modifications to this device not expressly approved by Vertex Standard could void the User’s authorization to operate this device.
