### **ON-LINE WARRANTY REGISTRATION**

Please visit www.standardhorizon.com to register the INTREPID+ Marine VHF. It should be noted that visiting the Web site from time to time may be beneficial to you, as new products are released they will appear on the STANDARD HORIZON Web site. Also a statement regarding product support should be added to the manual.

### **PRODUCT SUPPORT INQUIRIES**

If you have any questions or comments regarding the use of the INTREPID+, you can visit the STANDARD HORIZON Web site to send an E-Mail or contact the Product Support team at 562/404-2700 M-F 7:00-5:00PST.

# FCC RADIO LICENSE INFORMATION

Standard Horizon radios comply with the Federal Communication Commission (FCC) requirements that regulate the Maritime Radio Service.

## STATION LICENSE

An FCC ship station license is no longer required for any vessel traveling in U.S. waters which uses a VHF marine radio, RADAR or EPIRB, and which is not required to carry radio equipment. However, any vessel required to carry a marine radio on an international voyage, carrying a HF single side band radiotelephone or marine satellite terminal. FCC license forms, including applications for ship (506) and land station licenses can be downloaded via the Internet at <u>www.fcc.gov/forms.</u> To obtain a form from the FCC, call (888) 225-5322.

## RADIO CALL SIGN

Currently the FCC does not require recreational boaters to have a Ship Radio Station License. The USCG recommends the boats registration number and the state to be used.

## CANADIAN SHIP STATION LICENSING

You do not need a license if your vessel is not operated in sovereign waters of a country other than Canada or the U.S.A. If you do need a license contact their nearest field office or regional office or write:

Industry Canada Radio Regulatory Branch Attn: DOSP 300 Slater Street Ottawa, Ontario Canada, KIA 0C8

# FCC NOTICE

### NOTICE

Unauthorized changes or modifications to this equipment may void compliance with FCC Rules. Any change or modification must be approved in writing by STANDARD HORIZON.

### NOTICE

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

# **GENERAL INFORMATION**

## 1.1 INTRODUCTION

1

The STANDARD HORIZON GX1270S is a VHF/FM transceiver designed for use in the frequency range of 156.025 to 163.275 MHz. The GX1270S requires 13.8V for operation and has a switchable RF output power of 1 watt or 25 watts.

The transceiver is capable of RTCM SC101 DSC (Digital Selective Calling) operation and intercom operation with the use of an optional RAM mic (CMP23) (remote-control speaker/microphone with display).

The transceiver operates on all currently-allocated marine channels which are switchable for use with either USA, International, or Canadian regulations. It has an emergency channel 16 which can be immediately selected from any channel by pressing the red **16/9** key. NOAA Weather channels can also be accessed immediately by pressing the **WX** key with channel selection.

Other features of the transceiver include: scanning, priority scanning, submersible noise-canceling speaker mic, high and low voltage warning, and GPS repeatability.

## 1.2 FCC/ INDUSTRY CANADA INFORMATION

The following data pertaining to the transceiver is necessary to fill out the license application.

Type Acceptance	FCC Part 80
Output Power	1 Watt (low) and 25 Watts (high)
Emission	
Frequency Range	156.025 to 163.275 MHz
FCC Type Number	K66GX1270S
Industry Canada Type Approval	PENDING

Additional FCC and Industry Canada data, including licensing requirements, are contained in the companion document titled OWNER'S MANUAL SUPPLEMENT. The document also contains charts for VHF channel assignments, transceiver procedures, maintenance, factory service information, and warranty data.

# ACCESSORIES

## 2.1 PACKING LIST

2

When the package containing the transceiver is first opened, please check it for the following contents:

- GX1270S INTREPID+ Transceiver (White/Black)
- CMP351W/CMP351B (White/Black Microphone attached to the transceiver) and hanger kit
- · Mounting Bracket and attaching hardware
- Spare Fuse (6 A, 250 V )
- Owner's Manual
- Owner's Manual Supplement
- Quick-Reference Card
- Accessory Cable
- Power Cord
- Dust Cover

## 2.2 OPTIONS

CMB16	Flush-Mount Bracket
CMP23	Remote-Access Microphone (RAM Mic)
CAW23	10-foot Extension Cable for RAM Mic
101S	
201S	Extension Speaker
201SZ	Flush Mount Extension Speaker
CVS2500	Voice Scrambler
201SBK	Black Extension Speaker
201SBKZ	Flush Mount Black Extension Speaker

## 3

# **CONTROLS AND INDICATORS**

### NOTE

This section defines each control of the transceiver. See Figure 1 for location of controls. For detailed operating instructions refer to chapter 4 of this manual.

## 3.1 CONTROLS AND CONNECTIONS

### 1 POWER SWITCH/VOLUME CONTROL

Turns the transceiver on and off as well as adjusts the audio volume. To turn the transceiver on press and hold this knob until the LCD turns on. To turn it off, press and hold this knob until the LCD turns off. When the power is turned on, the transceiver is set to the last selected channel.

#### Secondary Use

When the transceiver is turned on while the **SCAN** and **WX** keys are held down, the internal microprocessor is reset. This clears the memory and all user-programmed settings, such as scan memory,, priority scan assignments, and A/B channel assignments. This condition is known as the default condition, the same as when shipped from the factory. For a list of these defaults, see the section on Resetting the Transceiver's Microprocessor.

#### NOTE

Resetting the microprocessor **will not erase** DSC MMSI and Directory Call Waiting information.

### ② SQUELCH CONTROL (SQL)

Sets the point at which random noise on the channel does not activate the audio circuits but a received signal does. This point is called the squelch threshold. Further adjustment of the squelch control will degrade reception of wanted transmissions.

### 3 KEY PAD

#### 16/9 Key

Immediately recalls channel 16 from any channel location. Holding down this key recalls channel 9. Pressing the **16**/9 key again reverts to the previous selected working channel.

#### Secondary use

Please see secondary use for the **WX** key.

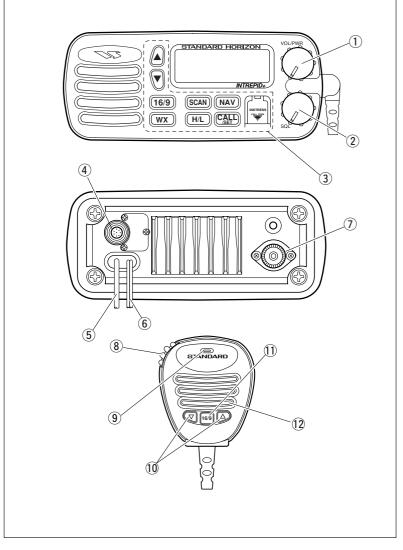

Figure 1. Controls and Connectors

### WX Key

Immediately recalls the previously selected NOAA weather channel from any channel location.

#### Secondary use

1. Holding down the **16/9** key while pressing the **WX** key changes the mode from USA to International or Canadian.

NOTE

If position is displayed, this icon will be hidden.

 Holding down the WX and SCAN key while turning the power on resets the microprocessor and erases scan channels from memory. This clears the memory and establishes the factory-set defaults. For a list of these defaults, see the section on Resetting the Transceiver's Microprocessor.

#### SCAN Key

- 1. Starts and stops scanning of programmed channels.
- If held while the UP or DOWN key on the mic are pressed or UP or DOWN key on radio are pressed, the radio will show the channels in scan memory. This function will not work if the unit is scanning.

#### NOTE

There is only one priority channel. The priority channel is marked with P-CH on the LCD.

#### DISTRESS Key

Used to send a DSC Distress Call. To send the distress call see section 6.2, (Sending a Distress Call).

#### UP and DOWN Keys

The **UP** and **DOWN** keys are used to select a desired channel and to select items in the DSC OPERATION and SETUP menus. The **UP** or **DOWN** key on the microphone can also be used to select channels.

#### CALL/SET Key

The **CALL/SET** key functions as the enter key.

#### Secondary use

Press the **CALL/SET** key to access the DSC OPERATION menu. The following DSC functions can be accessed from the DSC OPERATION menu; INDIVIDUAL, GROUP, ALL SHIPS, TELEPHONE, STANDBY, CALL WAIT, POS REQUEST and POS SEND.

Press and hold the **CALL/SET** key to access the SETUP menu. The following functions can be accessed in the SETUP menu; LAMP ADJUST, CONTRAST, CH NAME, INDIV DIR, TELEPHONE MEMORY ID, POS REPLY, SCRAMBLER, KEY BEEP, INDIV RING, TIME SET, USER MMSI, GROUP MMSI, DSC SCAN.

#### H/L Key

Toggles between high and low power. When the H/L key is pressed while the transceiver is on channel 13 or 67, the power will temporarily switch from LO to HI power until the **PTT** is released. The H/L key does not function on transmit inhibited and low power only channels.

#### NAV / IC Key

- 1. Pressing this key, when connected to the GPS receiver, the LCD displays position data, Date, Time, SOG (Speed Over Ground) and COG (Course Over Ground) from the GPS.
- 2. Press and hold down this key, when the optional RAM Mic connected. Intercom operation will operate between radio and RAM Mic.

### ④ RAM MIC CONNECTOR

Connects the Remote Access Microphone (RAM MIC). Refer to "section 8.0, (RAM MIC OPERATION).

## 5 ACCESSORY CONNECTION CABLE

Connects the radio to a GPS, and an external speaker.

#### 6 DC INPUT CABLE

Connects the radio to a DC power supply of 13.8V

#### **⑦ ANTENNA JACK**

Connects an antenna to the transceiver. Use a marine VHF antenna with an impedance of 50 ohms.

#### (8) PTT (Push-To-Talk) SWITCH

Keys the transmitter when the transceiver is in radio mode. If the transceiver is in the intercom operation mode, it activates the microphone for the intercom.

### (9) CLEAR VOICE NOISE-CANCELING SPEAKER MIC

Transmits the voice message with reduction of background noise.

### 10 UP ▲ and DOWN ▼ KEYS

The **UP**  $\blacktriangle$  and **DOWN**  $\blacktriangledown$  on the mic function the same as the **UP** and **DOWN** key on the front panel of the transceiver.

### 11 16/9 Key

Pressing the **16**/**9** key Immediately recalls channel 16 from any location. Press and hold the **16**/**9** key to recall channel 9. Pressing the **16**/**9** key again revert the radio to the previous select channel.

### **12 MICROPHONE SPEAKER**

The same audio heard through internal radio speaker as heard through microphone speaker.

## 4.1 LOCATION

4

- 1. The radio can be mounted at any angle. Choose a mounting location that:
  - is far enough from any compass to avoid any deviation in compass reading due to the speaker magnet
  - provides accessibility to the front panel controls
  - · allows connection to a power source and an antenna
  - has nearby space for installation of a microphone hanger
  - the antenna must be mounted at least 3 feet from radio

## 4.2 ELECTRICAL CONNECTIONS

### CAUTION

Reverse polarity connections will damage the radio!

Connect the power cord and antenna to the radio. Antenna and Power Supply connections are as follows (see Figure 2):

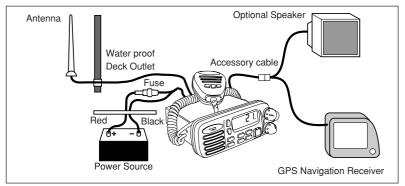

Figure 2. General Installation

 Mount the antenna at least 3 feet away from the radio. At the rear of the radio, connect the antenna cable. It must have a PL259 connector. RG-8/U coaxial cable must be used if the antenna is 25 feet or more from the radio. RG58 cable can be used for distances less than 25 feet.

- 2. Connect the red power wire to a 13.8 VDC  $\pm$  20% power source. Connect the black power wire to a negative ground.
- 3. If an optional remote extension speaker is to be used, refer to section 4.3 for connections.
- 4. It is advisable to have a Certified Marine Technician check the power output and the standing wave ratio of the antenna after installation.

## 4.3 ACCESSORY CABLE

P

### 4.3.1 Cable pin number and signal

in number	Signal
1	External speaker (+)
2	External speaker (-)
3	NMEA IN (+)
4	NMEA IN (-)
5	NMEA OUT (+)
6	NMEA OUT (-)

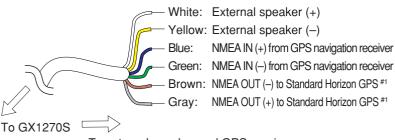

NMEA 0183 Version (1.5 to 2.3 ) Input Sentences: GLL – Geographic Position–Longitude/Latitude RMC – Recommended Minimum Specific GNSS Data

NMEA 0183 Version (2.3) Output Sentences: DSC – Digital Selective Calling Information DSE – Expanded Digital Selective Calling Information

When connecting the external speaker, GPS navigation receiver, or PA speaker strip off about 1 inch (2 cm) of the specified wire's insulation.

NOTE

Never short wires. This may lead to malfunctions.

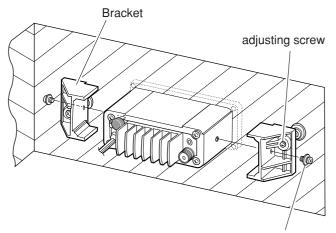

To external speaker and GPS receiver

#1: Connecting these wires to Standard Horizon GPS to show a DSC Position Request, Position Send or Distress Call on the display of the GPS.

## 4.4 OPTIONAL CMB16 FLUSH MOUNT INSTALLATION

- 1. Make a rectangular template for the flush mount measuring 2" H x 5 5/8" W.
- 2. Use the template to mark the location where the rectangular hole is to be cut. Confirm the space behind the dash or panel is deep enough to accommodate the transceiver (at least 6 inches deep). There should be at least 1/2 inch between the transceiver's heatsink and any wiring, cables or structures.
- 3. Cut out the rectangular hole and insert the transceiver.
- 4. Fasten the brackets to the sides of the transceiver with the lock washer nut combination, so that the mounting screw base faces the mounting surface (see Figure 3).
- 5. Turn the adjusting screw to adjust the tension so that the transceiver is tight against the mounting surface.

Lock-washer nut combination

#### Figure 3. CMB16 Flush Mount Installation

## 5.1 RECEPTION

- 1. After the transceiver has been installed, ensure that the power supply and antenna are properly connected.
- 2. Press and hold the VOL/PWR knob until the radio turns on.
- 3. Turn the **SQL** knob fully counterclockwise. This state is known as "squelch off".
- 4. Turn up the volume until noise or audio from the speaker is at a comfortable level.
- 5. Turn the **SQL** knob clockwise until the random noise disappears. This state is known as the "squelch threshold."
- Press the UP or DOWN key to select the desired channel. Refer to the channel chart in the OWNER'S MANUAL SUPPLEMENT for available channels.
- 7. When a message is received, adjust the volume to the desired listening level. The "BUSY" indicator in the LCD is displayed indicating that the channel is being used.

## 5.2 TRANSMISSION

- 1. Perform steps 1 through 6 of RECEPTION.
- 2. Before transmitting, monitor the channel to ensure it is clear. THIS IS AN FCC REQUIREMENT!
- 3. Press the **PTT** (push-to-talk) switch. The TX indicator on the LCD is displayed.
- 4. Speak slowly and clearly into the microphone.
- 5. When the transmission is finished, release the **PTT** switch.

### NOTE

This is a noise-canceling microphone. The oval slot on the top of microphone should be positioned within 1 inch (2 cm) from the mouth for optimum performance.

6. Refer to the OWNER'S MANUAL SUPPLEMENT for standard transceiver operating procedures.

## 5.3 TRANSMIT TIME - OUT TIMER (TOT)

When the **PTT** switch on the microphone is held down, transmit time is limited to 5 minutes. This prevents unintentional transmissions. About 10 seconds before automatic transmitter shutdown, a warning beep will be heard from the speaker(s). The transceiver will automatically go to receive mode, even if the **PTT** switch is continually held down. Before transmitting again, the **PTT** switch must first be released and then pressed again.

## 5.4 SIMPLEX/DUPLEX CHANNEL USE

Refer to the OWNER'S MANUAL SUPPLEMENT for instructions on use of simplex and duplex channels.

#### NOTE

All channels are factory-programmed in accordance with FCC (USA), Industry Canada (Canada), and International regulations. Mode of operation cannot be altered from simplex to duplex or vice-versa.

## 5.5 USA, CANADA, AND INTERNATIONAL MODE

- To change the modes, hold the 16/9 key and press the WX key. The mode changes from USA to International to Canadian with each press of the WX key.
- 2. USA will be displayed on the LCD for USA mode, INTL will be displayed for International mode, and CAN will be displayed for Canadian mode.
- 3. Refer to the OWNERS MANUAL SUPPLEMENT for allocated channels in each mode.

## 5.6 NOAA WEATHER CHANNELS

- 1. To receive a NOAA weather channel, press the **WX** key from any channel. The transceiver will go to the last selected weather channel.
- 2. Press the **UP** or **DOWN** key on the microphone to select a different NOAA weather channel.
- 3. To exit from the NOAA weather channels, press the **WX** key. The transceiver returns to the channel it was on prior to a weather channel.

## 5.7 NOAA WEATHER ALERT

In the event of extreme weather disturbances, such as storms and hurricanes, the NOAA (National Oceanic and Atmospheric Administration) sends a weather alert accompanied by a 1050 Hz tone and subsequent weather report on one of the NOAA weather channels. The transceiver is capable of receiving this alert if the following is performed:

- 1. Program NOAA weather channels into the transceiver's memory for scanning. Follow the same procedure as for regular channels under Section 5.8.
- 2. Press the **SCAN** key once to start memory scanning or hold down the **SCAN** key during memory scanning to start priority scanning.
- 3. The programmed NOAA weather channels will be scanned along with the regular-programmed channels. However, scanning will not stop on a normal weather broadcast unless a NOAA alert is received.
- 4. When an alert is received on a NOAA weather channel, scanning will stop and the transceiver will emit a loud beep to alert the user of a NOAA broadcast.
- 5. Press the **WX** key to stop the alert tone and receive the weather report.

#### NOTE

If the **WX** key is not pressed the alert tone will be emitted for 5 minutes and then the weather report will be received.

## 5.8 MEMORY SCANNING (M-SCAN)

### NOTE

- During scanning, the dot matrix area of the LCD will show M-SCAN or P-SCAN depending on the scan mode selected.
- If position is displayed this icon will be hidden.
  - 1. Adjust the **SQL** knob until background noise disappears.
  - Select a desired channel to be scanned using the UP or DOWN key. Press and hold the SCAN key, MEM will appear on the LCD which programs the channel into the transceivers memory.
  - 3. Repeat step 2 for all the desired channels to be scanned.
  - 4. To DELETE a channel from the transceiver's memory, press and hold the **SCAN** key, MEM will disappear in the LCD.
  - 5. To start scanning, press the **SCAN** key. Scanning will proceed from the lowest to the highest programmed channel number and will stop on a channel when a transmission is received.

 6. The received channel number will blink during busy stop.

7. To stop scanning, press the SCAN, 16/9, WX, or PTT key.

## 5.9 PRIORITY SCANNING (P-SCAN)

1. The priority channel is set to channel 16..

 For priority scanning during M-SCAN, press and hold the SCAN key, until P-SCAN appears in the LCD. Scanning will proceed between the memorized channels and the priority channel. The priority channel will be scanned after each programmed channel

3. The scanning will be performed while receiving the MEM CH (memorized channel).

4. To stop scanning, press the SCAN, 16/9, WX, or PTT key. NOTE

Triple watch (T/W) means the radio is watching CH70 for DSC Calls. Dual watch (D/W) means the radio is not watching CH70 for DSC Calls.

## **5.10 NAVIGATION INDICATION**

The transceiver has the ability to display the time, SOG and COG date, as well as the vessel's position (LAT/LON), if connected to a GPS receiver.

1. Press the **NAV** key to display position information.

If the GPS receiver receives no signal, the display will as shown in the illustration on the left.

2. To hide the position information, press the **NAV** key.

#### NOTE

• The TIME OFFSET should be set to local time in the DSC/RADIO setup mode when the radio is connected the GPS navigation receiver. To adjust TIME OFFSET to your local time, refer to section 7.11 TIME OFFSET.

## 5.11 VOICE SCRAMBLER

If privacy of communications is desired, a CVS2500 voice scrambler (VS) can be installed in the transceiver. Contact your Dealer to have a CVS2500 installed. Refer to the section 7.6 of DSC/RADIO SET UP mode to program the voice scrambler.

### 5.11.1 Operation with voice scrambler

1. Turn on the transceiver.

2. Select a channel that was programmed for scrambler mode. (Example: the voice scrambler code is set 3.)

If a channel is not set for the voice scrambler, the display will as shown in the illustration on the left.

If a voice scrambler is canceled temporarily in the SETUP menu, the display will be as shown in the illustration on the left.

- 3. Monitor the channel before transmitting.
- 4. Transmit the voice message. The signal sent will be scrambled.

## 5.12 RESETTING THE TRANSCEIVER'S MICROPROCESSOR

Resetting the microprocessor restores the initial, factory supplied conditions in the transceiver. These are called the default conditions.

To reset the microprocessor, first turn the transceiver off. Then while pressing the WX and SCAN keys, turn the transceiver on. The default conditions are:

- No channels in SCAN memory.
- Channel 16 will be selected when the transceiver is turned on.
- WX channel 01 will be recalled when the WX key is pressed.
- Key beep will be on.

#### NOTE

Resetting the microprocessor will not erase DSC MMSI and Directory Call Waiting information.

## 6.1 GENERAL

6

### 6.1.1 Digital Selective Calling (DSC)

Digital Selective Calling is a semi-automated method of establishing a radio call, it has been designated by the International Maritime Organization (IMO) as an international standard for establishing VHF, MF and HF radio calls. It had also been designated as part of the Global Maritime Distress and Safety System (GMDSS). It is planned that DSC will eventually replace aural watches on distress frequencies and will be used to announce routine and urgent maritime safety information broadcasts.

This new system will allow mariners to instantly send a distress call with GPS position (when connected to the transceiver) to the US Coast Guard and other vessels within range of the transmission. DSC will also allow mariners to initiate or receive distress, urgency, safety routine, POS Request, POS Send and Group calls to or from another vessel equipped with a DSC transceiver.

### 6.1.2 Maritime Mobile Service Identity (MMSI)

#### What is an MMSI?

An MMSI is a nine digit number used on Marine Transceiver capable of using Digital Selective Calling (DSC). This number is used like a telephone number to selectively call other vessels. Refer to section 7.7 (USER MMSI INPUT).

#### How can I obtain a MMSI assignment?

Contact your dealer or Standard Horizon for details.

#### WARNING

This radio is designed to generate a digital maritime distress and safety call to facilitate search and rescue. To be effective as a safety device, this equipment must be used only within communication range of a shore-based VHF marine channel 70 distress and safety watch system. The range of signal may vary but under normal conditions should be approximately 20 nautical miles.

## 6.2 SENDING A DISTRESS CALL

The distress call automatically includes the vessel's DSC MMSI and Lat/ Lon position. Refer to section 7.12, USER MMSI INPUT. The vessel's position can be sent only if the transceiver is properly connected to an operating GPS receiver.

#### 6.2.1 Sending a Distress Call Automatically

>DISTRESS EXIT	ר	I <sub>A</sub>	
-------------------	---	----------------	--

1. Lift the red spring loaded DISTRESS cover and press the **DISTRESS** key. The distress menu will appear on the LCD.

NOTE

If GPS is connected skips 2 and 3 steps and go directry to step 4.

shows below figure.)

(When No GPS is connected 2. Press the **DISTRESS** or **CALL/SET** key until or INVALID is displayed, LCD the distress sending menu appear.

When a GPS is connected and INVALID is not displayed, LCD will shows step4.

3. Press the **UP** or **DOWN** key to select SEND. When you select MANUAL, refer to 6.2.2 Sending a Distress Call Manually.

- TX HI USA
- DISTRESS WAITING 'n

- 4. Press and hold the **DISTRESS** or **CALL/SET** key for 3 seconds or more. Holding time will appear on the LCD.
- 5. When the distress signal is sent, the dot-matrix area of the LCD will be as shown in the illustration on the left

After the message has been sent, the Distress Alarm will sound.

- 6. The transceiver "shadow-watches" for a transmission between CH16 and CH70 until an acknowledgment signal is received. "DISTRESS" and "WAITING" will appear on the LCD.
- 7. If no acknowledgment is received, the distress call is repeated in 4 minute intervals until an acknowledgment is received.

been sent and it will be sent agin, LCD shows below figure.)

- DISTRESS ID987654321 RECEIVED ACK
- (When DISTRESS signal has 8. To cancel a Distress Call, press the 16/9, UP or DOWN key to select CANCEL in the menu. Then, press the CALL/SET key or turn off the radio.
  - 9. When a distress acknowledgment is received, a distress alarm sounds and channel 16 is automatically selected.

LCD shows ID and the answering type. RECEIVED ACK: acknowledgment signal is received RECEIVED RLY: relay signal is received from other vessel or coast station.

10. To cancel the alarm, press any key.

### NOTE

When a GPS receiver with NMEA output is connected, the vessel's position is automatically transmitted with the distress call.

#### 6.2.2 Sending a Distress Call and Manually Inputting a Position

1. Perform steps 1 through 2 of 6.2.1 Sending a Distress Call Automatically.

- DISTRESS LITC 0.00 0.00 N 0.00, M
- 2. Press the UP or DOWN key to select MANUAL and press the CALL/SET key.
- 3. Press the UP or DOWN key to select the desired numeral and press the CALL/SET key. UTC (universal time coordinates also known as GMT) area is entering the time. The time can be entered through 0:00 - 23:59. "- - - N" area is entered the north latitude. The north latitude can be entered through 0.00 - 90.00. "- - -' W" area is entered the west latitude. The west latitude can be entered through 0.00' - 180.00.
- 4. Press and hold the **DISTRESS** for 3 seconds or more. Holding time will appear on the LCD.
- 5. Perform steps 5 through 10 of 6.2.1 Sending a Distress Call Automatically.

# 6.3 SENDING AN INDIVIDUAL CALL

This feature allows the user to contact another user vessel DSC and to automatically switch the receiving DSC radio to a desired working channel. This feature is similar to calling a vessel on CH16 and requesting to go to a another channel. To send an individual call, see section 7.5 INDIVIDUAL DIRECTORY SETUP. The individual call function allows you to transmit a DSC signal to a specific party only, prompting communication on a voice channel.

1. Select the traffic channel for voice communication.

2. Press the CALL/SET key. The DSC CALLING menu will appear.

 Press the UP or DOWN key to select INDIVIDUAL. (To cancel, select EXIT with the UP or DOWN key or press the 16/9, or WX key.)

 Press the CALL/SET key. The transceiver will beep, and the individual directory will appear.

- 5. Press the **UP** or **DOWN** key to select the individual you want to contact.
- 6. Press the **CALL/SET** key to transmit the individual DSC signal.

7. After INDIVIDUAL CALL is transmitted, the transceiver will wait 8 seconds for the acknowledgment. If the reply signal is not received, the transceiver will transmit again.

8. After the second INDIVIDUAL CALL is transmitted, if the reply signal is not received, the dot matrix area of the LCD will display ">SEND" to prompt the user to send the call again or exit the mode.

9. When an individual call acknowledgment "able to comply" is received, the established channel is automatically selected and an alarm sounds.

10. When an individual call acknowledgment with "unable to comply" is received, the established channel is automatically selected.

11. To cancel, select EXIT using the **DOWN** key and press the **CALL**/ **SET** key.

This procedure can be also canceled as follows; Press the  $WX \mbox{ or } 16/9 \mbox{ key}.$ 

## 6.4 SENDING A GROUP CALL

This feature allows the user to contact a group of specific vessels using DSC and to automatically switch to a desired channel. This feature allows you to transmit a DSC signal with group MMSI that has been set on section 7.13 Group MMSI INPUT.

4. Press the CALL/SET key.

1. Select the desired channel to use Group Call for voice communications.

2. Press the **CALL/SET** key. The DSC CALLING menu will appear.

 Press the UP or DOWN key to select GROUP. To cancel, select EXIT with the DOWN key or press 16/9 key.

 Press the UP or DOWN key to select SEND. To cancel, select EXIT with the DOWN key or press 16/9 key.

 Press the CALL/SET key. When the Group Call signal is sent, the dotmatrix area of the LCD will be as shown in the illustration on the left.

	HI US	1
CCG		A

7. After the GROUP CALL is transmitted, all the radios in the group will switch to the designated channel.

## 6.5 SENDING AN ALL SHIPS CALL

The All Ships Call function allows contact to be established with other vessel stations without having their ID in the individual calling directory. Also, priority for the call can be designated as Urgency, Safety or Routine. URGENCY Call: This type of call is used when a vessel may not truly be in distress, but have a potential problem that may lead to a distress situation. SAFETY Call: Used to transmit boating safety information to other vessels. This message usually contains information about an overdue boat, debris in the water. Loss of a navigation aid or an important meteorological message.

- 1. Select the traffic channel (for voice communication).
- Press the CALL/SET key. The DSC CALLING menu will appear.

3. Press the UP or DOWN key to select ALL SHIP.

 Press the CALL/SET key. To cancel this, press the DOWN key to select EXIT.

5. Press the **UP** or **DOWN** key to select the nature of call (URGENCY, SAFETY or ROUTINE).

6. Press the **CALL/SET** key to transmit the selected type of ALL SHIPS DSC call. When ROUTINE is selected, the signal is transmitted then the transceiver will wait on the channel selected in step 1.

7. After the ALL SHIPS CALL is transmitted, the transceiver will wait on CH16 except ROUTINE.

## 6.6 SENDING A DSC TELEPHONE CALL

This feature allows the user to transmit a DSC telephone call automatically to a telephone (marine operation) coast station. To use DSC Telephone Call function, Telephone ID has to be set as 7.6 Telephone ID Setup. Refer to Owner's supplement manual for Telephone Call detail.

## 6.6.1 Operation of Telephone Call

- 1. Press the CALL/SET key. The DSC CALLING menu will appear.
- 2. Press the **UP** or **DOWN** key to select TELEPHONE.
- 3. Press the CALL/SET key.
- 4. Press the **UP** or **DOWN** key to select telephone name you want to contact.
- Press the CALL/SET key. When the Telephone call signal is sent, the dotmatrix area of the LCD will be as shown in the illustration on the left.
- 6. When the transceiver receives the telephone call starting signal, the channel is switched to telephone call channel and the alarm will sound. If you receive no acknowledgment signal, refer to 6.6.2 Resend Telephone Call Signal. If you receive Busy signal, refer to 6.6.3 Resend Telephone Call When Receive Busy Signal.
- 7. To end Telephone Call, press the **CALL/SET** key.
- When the transceiver has received the telephone call ending signal, the transceiver is switched previous channel and the elapsed time will be shown as the illustration on the left.
  If no elapsed time data is received, "--:--" will be shown.

## 6.6.2 Resend Telephone Call Signal

When you send starting or ending telephone call signal to the coast station and you receive no acknowledgment signal from coast station during 8 seconds or more, Resending menu will appear. You can resend the telephone call with this menu.

1. You receive no acknowledgment signal during from coast station, the dot-matrix area of the LCD will be as shown in the illustration on the left.

 Press the UP or DOWN key to select SEND. To exit the Telephone Call mode, press the UP or DOWN key to select EXIT and press the CALL/SET key.

## 6.6.3 Resend Telephone Call When Receive Busy Signal

When you send a telephone call signal to the coast station and you receive Busy signal from coast station, a menu will appear. You can resend the telephone call with this menu.

1. You receive busy signal from coast station, the dot-matrix area of the LCD will be as shown in the illustration on the left.

 Press the UP or DOWN key to select SEND. To exit the Telephone Call mode, press the UP or DOWN key to select EXIT and press the CALL/SET key.

## 6.7 DSC STANDBY

The DSC Standby function allows the transceiver to reply to DSC calls with the UNATTENDED message and logs the calls in the call waiting directory (This feature is similar to an answer machine). When set to the DSC Standby mode, voice traffic may still be monitored on the selected channel.

1. Press the CALL/SET key.

The DSC CALLING menu will appear.

2. Press the **UP** or **DOWN** key to select the STANDBY mode.

- 3. Press the CALL/SET key.
- 4. When an individual DSC call is received, the radio will respond with the UNATTENDED message if an operator cannot answer the call. The DSC call will be logged into the radio's call waiting directory.
- 5. To cancel this, press the **16/9** key.

### NOTE

This function is available as followings; DSC SCAN is turned on, or the current channel is set CH70 if DSC SCAN is turned off.

## 6.8 CALL WAITING DIRECTORY

The DSC Call Waiting directory logs 10 received distress calls, and logs 20 individual calls that are received and not answered within 5 minutes or while the radio is set on the DSC Standby function. Calls will be logged while busy with other communications as long as the transmitter is not keyed at the time of the call. If the call is answered within 5 minutes the call will not be logged. When a call is logged, a message will appear on the LCD.

### NOTE

When a DISTRESS CALL is received, this call will be logged on the distress call waiting directory.

### 6.8.1 Operation of Distress Call Waiting

1. Press the **CALL/SET** key. The DSC CALLING menu will appear.

2. Press the **UP** or **DOWN** key to select CALL WAIT.

3. Press the CALL/SET key.

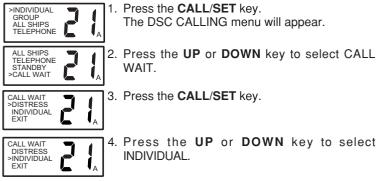

4. Press the **UP** or **DOWN** key to select DISTRESS.

- Press the CALL/SET key to display the log data which was received last.
- 6. Press the UP or DOWN key to select another logged call
- To exit from Distress Call Waiting, press the CALL/SET key and select EXIT.

### 6.8.2 Operation of Individual Call Waiting

5. Press the **CALL/SET** key to enter the individual log.

6. Press the **UP** or **DOWN** key to select the name.

- 8. Press the CALL/SET key to resend the INDIVIDUAL CALL.
- 9. To exit from Individual Call Waiting, select EXIT and press the CALL/SET key.
- 10. Press the **UP** or **DOWN** key to select another logged call or to select EXIT.
- 11. Press the CALL/SET key to access next logged call or EXIT.

## 6.9 POSITION REQUEST

The position request mode may be used to show the position of another vessel that has a DSC radio with this feature. The other vessel must have an operating GPS receiver connected to its DSC transceiver and must not have its transceiver set to deny position requests. (Refer the section 7.5 to enter information into the individual derctory)

1. Select a traffic channel, then press the **CALL**/ **SET** key. Then the DSC CALLING menu will appear in the display.

2. Press the **UP** or **DOWN** key to select the POS REQUEST.

3. Press **CALL/SET** key to appear the Position request directory. This directory uses the INDIVIDUAL Directory information.

4. Press the **UP** or **DOWN** key to select a name.

5. Press the **CALL/SET** key to transmit the position request DSC call.

6. After a DSC position request is transmitted, the transceiver remains on channel 70 until position data is received.

7. The transceiver received position data from a vessel.

8. If the transceiver does not receive a reply, the LCD will display ">SEND" to prompt the user to send the call again or exit the mode.

9. If the transceiver received no position data, the LCD will show "NO POSITION DATA".

10. When the transceiver receives the requested position, the transceiver outputs a NMEA DSC sentence which may be used by a Standard Horizon GPS chart plotter to show the vessels position.

## 6.10 POSITION SEND

The position send mode may be used to send your position to another radio with this feature. Your vessel must have an operating GPS receiver connected to the INTREPID+ to send the position and must not have its transceiver set to deny position send.

When other vessel receives your position, the transceiver outputs a NMEA DSC sentence which may be used by a Standard Horizon GPS chart plotter to show your position.

Select a traffic channel, then press the CALL/

1.

SET key. Then the DSC CALLING menu will appear in the display.

2. Press the **UP** or **DOWN** key to select the POS SEND.

3. Press the **CALL/SET** key to select the Position send directory. This directory uses the INDIVIDUAL Directory information.

4. Press the **UP** or **DOWN** key to select a name.

Press the CALL/SET key to transmit your position DSC call.

- After your position DSC is transmitted, the resend menu will appear. When you send your position DSC again, select SEND and press the CALL/SET key. To exit the mode, select EXIT and press the CALL/SET key.
- 7. The transceiver returns to radio mode.

## 6.11 RECEIVING DSC CALLS

Several types of DSC transmissions can be received. The required action depends on the particular DSC type as outlined in the following examples.

### NOTE

If the radio is receiving on a working channel or transmitting on a working channel, DSC calls will not be received.

## 6.11.1 Receiving a distress call

1. A distress call is received. An emergency alarm sounds.

Then channel 16 is automatically selected.

2. Press any key to stop the alarm.

DISTRESS ID366911111 NO POSITION DATA	16
DAIA	

3. If the received distress data does not include the position data, the LCD will show the display on the left.

#### NOTE

You must continue monitoring channel 16 as a coast station may require assistance in any rescue attempt.

### 6.11.2 Receiving a distress relay call

1. A distress relay call is received. An emergency alarm sounds.

Then channel 16 is automatically selected.

2. Press any key to stop the alarm.

NOTE

You must continue monitoring channel 16 as a coast station may require assistance in any rescue attempt.

## 6.11.3 Receiving an all ships call

1. An all ships call is received. An emergency alarm sounds.

Then channel 16 is automatically selected.

- 2. Press any key to stop the alarm.
- 3. Monitor channel 16 or traffic channel until the URGENCY communication is completed.

### 6.11.4 Receiving a geographical area call

- 1. A geographical call is received. An emergency alarm sounds (different from DISTRESS). Then the requested channel from the other ship is automatically selected.
- 2. Press any key to stop the alarm.
- 3. Monitor the traffic channel for an announcement from the calling ship.

This feature is only available when a GPS receiver is connected.

### 6.11.5 Receiving an individual call

When receiving an individual call, an acknowledgment must be sent back to the calling station.

1. An individual call is received. An individual call alarm sounds. Then the radio automatically switches to the requested channel.

- 2. Press any key to stop the alarm.
- 3. Press the **PTT** on the mic and talk to the calling ship.

### 6.11.6 Receiving a position request

When a position request call is received from another vessel, a calling alarm will sound and POS REQUEST will show in the LCD. Operation and transceiver function differs depending on the SET UP POS REPLY mode setting.

#### Automatically reply:

1. When a position request call is received, a calling alarm sounds 4 times. Then requested position coordinates are transmitted automatically.

2. To exit from position request display, press any key.

#### Manually reply:

1. When a position request call is received, the LCD will be as shown in the illustration on the left.

- A calling alarm sounds 4 times. Then select type of reply function REPLY or EXIT by using the UP or DOWN key.
- 3. When REPLY is selected, press the **CALL/SET** key. And the requested position coordinates will be transmitted.
- 4. To exit from position request display, press any key.

# DSC / RADIO SETUP MODE

## 7.1 SETUP

1. Press and hold down the **CALL/SET** key until the SETUP menu appears.

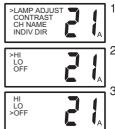

2. To select the items, press the UP or DOWN key.

### NOTE

The Optional RAM MIC CMP23 cannot access the SETUP menu. The SETUP menu is displayed in the LCD of the CMP23 as shown in the illustration on the right.

- -

## 7.2 LAMP ADJUSTING

- 1. Select LAMP ADJUST in the SETUP menu with the **UP** or **DOWN** key.
- 2. Press the CALL/SET key.

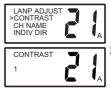

The lamp adjusting menu will appear.

3. Press the **UP** or **DOWN** key to select the desired level.

When OFF is selected, the lamp is extinguished. When HI is selected, the lamp is brightest.

4. Press the **CALL/SET** key to store the selected level. The LCD will return to the SETUP menu.

## 7.3 LCD CONTRAST

- 1. Select CONTRAST in the SETUP menu with the UP or DOWN key.
- 2. Press the **CALL/SET** key. The contrast setting menu will appear. The contrast level can be set from 1 to 7.

7.

3. Press the **UP** or **DOWN** key to select the desired level. (Example: 5 is selected) The contrast is stronger as the selected level increases.

4. Press the **CALL/SET** key to store the selected level. The LCD will return to the SETUP menu.

### 7.4 CH NAMING

1. To select USA, INT or CANADA, press and hold the **16/9** key and press **WX** key.

- Select CH NAME in the SETUP menu (press and hold the CALL/SET key) with the UP or DOWN key.
- 3. Press the CALL/SET key.

4. Press the **UP** or **DOWN** key to select the channel to be named and press the **CALL/SET** key.

- 5. Press the **UP** or **DOWN** key scroll through the alphabet and 0 9.
- 6. Press the **CALL/SET** key to enter the desired letter and move the cursor one space to the right. Repeat procedure until the name is complete. The name can consist of up to twelve characters, if you do not use all twelve character press the **CALL/SET** key to move to the next space. If you clear the previous letter, press the **H/L** key.
- 7. To enter the name, press the CALL/SET key for 1 second or more.

8. If you want to enter the name of another channel, select NEXT and press the **CALL/SET** key. Repeat steps 2 through 6. To return the Setup menu, select EXIT and

press the CALL/SET key.

## 7.5 INDIVIDUAL DIRECTORY SETUP (DSC)

- 1. Press and hold the **CALL/SET** key until the SETUP menu is displayed.
- 2. Select INDIVI DIR by using the **UP** or **DOWN** key.

- 3. Press the **CALL/SET** key to enter the individual directory.
- 4. Press the **UP** or **DOWN** key to display the next empty address number.

(Example: The address number 01 - 04 have been stored in the illustration on the left.) The address number can be set from 01 to 30.

- 5. Press the CALL/SET key to select the address number.
- 6. Press the **UP** or **DOWN** key scroll through the alphabet and 0 9.

- 7. Press the CALL/SET key to enter the desired letter and move the cursor one space to the right. Repeat procedure until the name is complete. The name can consist of up to eleven characters, if you do not use all eleven character press the CALL/SET key to move to the next space. This method can also be used to enter a blank space in the name. To clear the previous letter, press the H/L key.
- 8. After the eleventh letter or space has been entered, press the **CALL/SET** key to advance to the MMSI (Maritime Mobile Service Identity) number entry.
- Press the UP or DOWN key to scroll through numbers, 0-9. To enter the desired number and move one space to the right press the CALL/SET key. Repeat procedure until all nine spaces of MMSI number are entered.

10. After entering the MMSI number press and hold the **CALL/SET** key until the screen prompts you to select NEXT or EXIT.

- To enter another individual address select NEXT with the UP or DOWN key and press the CALL/SET key. Repeat steps 4 through 10.
- 12. To exit the individual directory setup, select EXIT with the **UP** or **DOWN** key and press the **CALL/SET** key.

### NOTE

Selecting NEXT or EXIT will automatically save the name and MMSI number into memory.

## 7.6 DSC TELEPHONE DIRECTORY ID INPUT

- 1. Press and hold the **CALL/SET** key until the SETUP menu is displayed.
- 2. Select TELEPHONE with the **UP** or **DOWN** key and press the **CALL/SET** key.

- 3. To select the desired memory address with the UP or DOWN key and press the CALL/SET key.
- 4. To enter the letter of the name, press the UP or DOWN key scroll through the alphabet and 0 - 9 and press the CALL/SET key. Repeat procedure until the name is complete. The name can consist of up to eleven characters.

- 5. A cursor will be moved to the telephone number section when he name is entered up to eleven characters.
- 6. To enter the telephone number, press the **UP** or **DOWN** key scroll through the 0 9 and press the **CALL/SET** key. Repeat procedure until the telephone number is complete. The telephone number can consist of up to 16 digits.

The display will show up to 12 digits, when you enter the 13 digits or more, the arrow symbol will be appeared. Press and hold the **CALL/SET** key to store the telephone number.

7. Press and hold the **CALL/SET** key until COST MMSI is displayed.

- To enter the Coast MMSI, press the UP or DOWN key scroll through the 0 - 9 and press the CALL/SET key. Repeat procedure until the Coast MMSI is complete. The Coast MMSI can consist of up to nine digits.
- 9. To store the Telephone Memory ID, press the **CALL/SET** key for 1 second or more.

10. To enter another Telephone Memory ID, select the NEXT and press the **CALL/SET** key. Repeat steps 3 through 8. The address number can be entered up to 30th.

To return the Setup menu, select EXIT and press the **CALL/SET** key.

### NOTE

Refer to the Owner's Manual Supplement for making telephone calls.

## 7.7 POSITION REQUEST REPLY TYPE

1. Press and hold the CALL/SET key until the SETUP menu is displayed.

- 2. Select POS REPLY in the SETUP menu with the **UP** or **DOWN** key.
- Press the CALL/SET key. The position request reply type menu will appear.
- 4. Press the UP or DOWN key to select AUTO or MANUAL. In AUTO mode, after a DSC POS Request is received the Radio will automatically transmit your vessels position. In MANUAL mode, the display of the INTREPID+ will show who is requesting the position, and to send your position the CALL/SET key will have to be pressed.
- 5. Press the **CALL/SET** key to store a selected reply type. The LCD display will return to the SETUP menu.

## 7.8 VOICE SCRAMBLER

1. Press and hold the **CALL/SET** key until the SETUP menu is displayed.

2. Select SCRAMBLER in the SETUP menu with the **UP** or **DOWN** key.

 Press the CALL/SET key. The scrambler setup menu will appear.

4. Select CODE in the SCRAMBLER SETUP menu and press the **CALL/SET** key.

5. Press the **UP** or **DOWN** key to change the scrambler code. The scrambler code can be set from 0 to 3.

6. Press the **CALL/SET** key to store the selected code. The LCD will return the SCRAMBLER SETUP menu.

7. Select CHANNEL in the SCRAMBLER SET UP menu and press the **CALL/SET** key.

8. Press the **UP** or **DOWN** key to change the scrambled channel.

- 9. Press the **CALL/SET** key to store the selected channel. Repeat steps 8 and 9 to set other channels.
- 10. Press and hold down the **CALL/SET** key to exit from the channel select menu.

The LCD will return the SCRAMBLER SETUP menu.

11. Select ON to use the scrambler operation and press the **CALL/SET** key. The LCD will return the SETUP menu.

NOTE

This menu will not appear unless the CVS2500 is installed.

## 7.9 KEY BEEP (ON OR OFF)

1. Press and hold the **CALL/SET** key until the SETUP menu is displayed.

 Select KEY BEEP in the SETUP menu with the UP or DOWN key.

 Press the CALL/SET key. The KEY BEEP setting menu will appear.

- 4. Press the UP or DOWN key to select ON or OFF.
- 5. Press the **CALL/SET** key to set the key beep condition. The LCD will return to the SETUP menu.

#### NOTE

Emergency alarm and beeps for DSC operation cannot be turned OFF.

### 7.10 INDIVIDUAL RING

1. Press and hold the **CALL/SET** key until the SETUP menu is displayed.

 Select INDIV RING in the SETUP menu with the UP or DOWN key.

3. Press the CALL/SET key.

The INDIVIDUAL RING setting menu will appear.

- 4. Press the **UP** or **DOWN** key to select ringing time of a INDIVIDUAL CALL. DEFAULT setting rings for 3 minutes continuously.
- 5. Press the **CALL/SET** key to store the INDIV RING. The LCD will return to the SETUP menu.

## 7.11 TIME OFFSET

Sets the time difference between local time and UTC. Time is displayed when position (LAT/LON) is displayed by pressing the **NAV** key.

1. Press and hold the **CALL/SET** key until the SETUP menu is displayed.

2. Select TIME SET in the SETUP menu with the **UP** or **DOWN** key.

3. Press the **CALL/SET** key. The time offset menu appears.

4. Press the **UP** or **DOWN** key to select time offset from UTC.

See Figure 4 to find your offset time from UTC. If 0:00 is assigned, the time is the same as UTC (Universal Time Coordinated) or GMT (Greenwich Mean Time)

5. Press the **CALL/SET** key to store the time offset. The LCD will return to the SETUP menu.

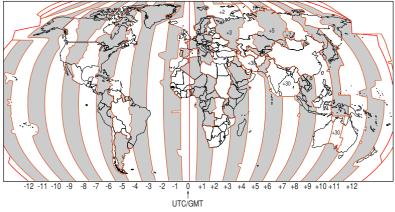

Figure 4. Offset time table

## 7.12 USER MMSI INPUT

1. Press and hold the **CALL/SET** key until the SETUP menu is displayed.

2. Select the USER MMSI in the SETUP menu with the **UP** or **DOWN** key.

3. Press the CALL/SET key.

The USER MMSI menu will appear, and the first space will blink.

. Press the **UP** or **DOWN** key to set the number (0 to 9 ).

5. Press the **CALL/SET** key to store the set number.

The blinking number is stored, and the next space will blink. To delete previous number, press the **H/L** key.

- 6. Repeat steps 3 and 4 to set your MMSI.
- 7. When the last number of your MMSI is in place, press the CALL/ SET key to store your MMSI.

#### NOTE

User MMSI can be input only twice. If the user tries to input MMSI more than twice, the radio will show the display on the right. If the user needs to change the MMSI more than twice, the transceiver will have to be sent to Factory Service. Refer to the Owner's Manual Supplement for address.

## 7.13 GROUP MMSI INPUT

1. Press and hold the **CALL/SET** key until the SETUP menu is displayed.

2. Select the GROUP MMSI in the SETUP menu with the **UP** or **DOWN** key.

3. Press the **CALL/SET** key. The GROUP MMSI menu will appear, and the first space will blink.

4. Press the **UP** or **DOWN** key to set the number (0 to 9).

5. Press the **CALL/SET** key to store the set number.

The blinking number is stored, and the next space will blink.

- 6. Repeat steps 3 and 4 to set your GROUP MMSI.
- 7. When the last number of your MMSI is in place, press and hold down the **CALL/SET** key to store your MMSI.

## 7.14 DSC SCANNING

The radios software has been updated to improve DSC Channel 70 SCANNING:

- 1. When a DSC call is received the radio will only show Channel 70 on the display if the call was directed to the radios MMSI or if it is a Distress or All ships DSC call.
- 2. Selection to turn ON or OFF the DSC SCAN function.

When the radio is shipped from the factory it is programmed so CH70 (the DSC channel) is scanned at all times. A selection has been added to the SETUP MENU in the radio to disable the DSC SCAN. However, turning off DSC SCAN will disable the radio from receiving DSC calls i.e.: Individual Call, All Ships Call, Distress Call and Position Requests. If you want to use any of the functions the selection should be left ON.

### TO CHANGE DSC SCAN METHOD:

1. Press and hold the CALL/SET key to enter into the SETUP mode.

2. Select DSC SCAN using the **UP** or **DOWN** key.

- 3. Press the **CALL/SET** key. The DSC SCAN setting menu will appear.
- 4. Press the UP or DOWN key to select ON or OFF.
- 5. To store the selection, press the **CALL/SET** key. The LCD will return to the SETUP menu.

# RAM MIC OPERATION

If the optional RAM Mic (CMP23) is connected to the remote microphone connector on the transceiver's rear panel, then the transceiver can use the remote control operation except for a few functions. The RAM Mic has a maximum range of 50 feet (15 m) with the use of two 10-foot extension cables (CAW23). The intercom operation can be used between the RAM Mic and the transceiver.

## 8.1 RAM MIC CONTROLS AND CONNECTIONS

### POWER SWITCH (PWR)

Turns the transceiver on and off.

Press and hold down the **PWR** key until the LCD turns on. To turn the transceiver off with the RAM Mic, press and hold the **PWR** key until the LCD turns off.

#### SQUELCH KEY (SQL)

Activates the squelch adjusting mode.

Press this key to activate the squelch adjusting mode. Press the  $\blacktriangle$  or  $\blacktriangledown$  key to adjust the squelch.

Sets the point at which random noise on the channel does not activate the audio circuits but a received signal does. This point is called the "squelch threshold". Further adjustment of the squelch control by pressing the  $\blacktriangle$  key will degrade the reception of wanted transmissions.

When the **SQL** key is pressed and held down for 1 second or more, the squelch is turned off.

#### VOLUME KEY (VOL)

Activates the volume adjusting mode.

Press this key to activate the volume adjusting mode. Press the  $\blacktriangle$  or  $\blacktriangledown$  key to adjust the volume.

#### PTT (Push-To-Talk) SWITCH

Activates transmission.

#### 16/9 KEY

Immediately recalls channel 16 from any channel location. Press and hold the **16/9** key to recall channel 9. Recalls the previous channel when the **16/9** key is pressed again. When holding down the **16/9** key while pressing the **WX** key, the mode toggles between USA, International and Canadian.

8

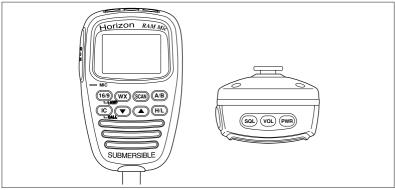

Figure 5. CMP23 RAM Mic

### A/B Key

This key is unavailable for this transceiver.

### IC Key

Activates the intercom mode between the RAM Mic and the transceiver. Refer to section 8.3, INTERCOM OPERATION.

### WX Key

Immediately recalls a weather channel from any channel location. Recalls the previous channel when the **WX** key is pressed again.

#### Secondary use

When holding down the **16/9** key while pressing the **WX** key, the mode toggles between USA, International and Canadian.

### SCAN Key

1. Starts and stops scanning of programmed channels.

2. If held while the UP or DOWN key is pressed, the radio will show the channels in scan memory. This function will not work if the unit is scanning.

### Secondary use

Press the **SCAN** key to add the selected channel to the transceiver's scan memory, MEM will appear on the LCD to indicate that the channel has been entered into scan memory. To delete the channel from scan memory, press the **SCAN** key until the MEM disappears from the LCD.

### NOTE

If the transceiver is in the M-SCAN mode, then the RAM Mic is in SC mode. If the transceiver is in P-SCAN mode, then the RAM Mic is in PS mode.

### DOWN KEY (V)

Selects the desired channel and adjusts the volume and squelch levels. Each press decreases the channel number, volume level and squelch level. When held down, the channels or levels decrease continuously.

### UP KEY (▲)

Selects the desired channel and adjusts the volume and squelch levels. Each press increases the channel number, volume level, and squelch level. When held down, the channels or levels increase continuously.

#### Secondary use

When holding down the **16/9** key while pressing the **UP**  $\blacktriangle$  key, changes the brightness (3 levels) of the LCD back light.

#### H/L KEY

Toggles between high and low power. When the H/L key is pressed while the transceiver is on Canadian channel 13, USA channel 13 or 67, the power will temporarily switch from LO to HI power until the **PTT** switch is pressed. The H/L key does not function on transmit-inhibited and low power-only channels.

### 8.2 INDICATORS

#### **Channel Display**

Displays the operating channel in both transmission and reception mode.

#### A Indicator

A simplex channel in USA or Canadian mode whose counterpart in the International mode is a duplex channel.

#### TX/ BUSY Indicator

"TX" is displayed in transmitting mode. "BUSY" is displayed in receiving mode.

#### USA/ INTL/ CAN Indicator

The mode of operation. "USA" indicates USA mode. "INTL" indicates International mode and "CAN" indicates Canadian mode.

#### WX Indicator

A weather channel.

### MEM Indicator

The channel is in the transceiver's scan memory.

#### **H/L Indicator**

"H" is high power. "L" is low power. Blank is a reception only channel.

#### SQL/VOL Indicator

"SQL" is squelch adjusting mode. "VOL" is volume adjusting mode.

### **8.3 INTERCOM OPERATION**

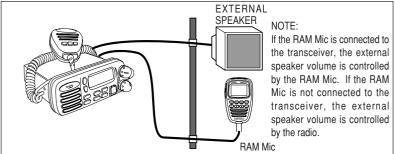

Figure 6. Intercom operation

#### 8.3.1 Communication

- 1. Press the **IC** key while in radio mode, the mode is then changed to INTERCOM mode. If the **IC** key is pressed again the mode will revert to radio mode.
- 2. "IC" is displayed on both the transceiver and the RAM Mic when the intercom operation is activated.
- 3. Press the **PTT** switch. The "TX" indicator is displayed.

#### NOTE

A warning beep is emitted when the RAM Mic **PTT** switch is pressed while the transceiver microphone's **PTT** switch is pressed.

- 4. Speak slowly and clearly into the microphone, hold the microphone about 1/2 inch away from your mouth.
- 5. When finished, release the **PTT** switch.

### 8.3.2 Calling

1. Hold down the **IC** key in the intercom operation for 1 second or more. A calling beep is emitted twice from the transceiver speaker.

# **OPERATING PRACTICES**

## 9.1 EMERGENCY (CHANNEL 16 USE)

Channel 16 is known as the *Hail and Distress Channel*. An emergency may be defined as a threat to life or property. In such instances, be sure the transceiver is on and set to CHANNEL 16. Then use the following procedure:

- 1. Press the microphone push-to-talk switch and say "**Mayday, Mayday, Mayday.** This is \_\_\_\_\_, \_\_\_\_, " (your vessel's name).
- 2. Then repeat once: "*Mayday*, \_\_\_\_\_," (your vessel's name).
- Now report your position in latitude/longitude, or by giving a true or magnetic bearing (state which) to a well-known landmark such as a navigation aid or geographic feature such as an island or harbor entry.
- 4. Explain the nature of your distress (sinking, collision, aground, fire, heart attack, life-threatening injury, etc.).
- 5. State the kind of assistance your desire (pumps, medical aid, etc.).
- 6. Report the number of persons aboard and condition of any injured.
- 7. Estimate the present seaworthiness and condition of your vessel.
- 8. Give your vessel's description: length, design (power or sail), color and other distinguishing marks. The total transmission should not exceed 1 minute.
- 9. End the message by saying *"OVER"*. Release the microphone button and listen.
- 10. If there is no answer, repeat the above procedure. If there is still no response, try another channel.

## 9.2 CALLING ANOTHER VESSEL (CHANNEL 16 OR 9)

Channel 16 may be used for initial contact (hailing) with another vessel. However, its most important use is for emergency messages. This channel must be monitored at all times except when actually using another channel. It is monitored by the U.S. and Canadian Coast Guards and by other vessels. **Use of channel 16 for hailing must be limited to initial contact only.** Calling should not exceed 30 seconds, but may be repeated 3 times at 2-minute intervals. In areas of heavy radio traffic, congestion on channel 16 resulting from its use as a hailing channel can be reduced significantly in U.S. waters by using **channel 9** as the initial contact (hailing) channel for non-emergency communications. Here, also, calling time should not exceed 30 seconds but may be repeated 3 times at 2-minute intervals.

9

Prior to making contact with another vessel, refer to the channel charts in this manual, and select an appropriate channel for communications after initial contact. For example, Channels 68 and 69 of the U.S. VHF Charts are some of the channels available to non-commercial (recreational) boaters. Monitor your desired channel in advance to make sure you will not be interrupting other traffic, and then go back to either channel 16 or 9 for your initial contact.

When the hailing channel (16 or 9) is clear, state the name of the other vessel you wish to call and then "*this is*" followed by the name of your vessel and your Station License (Call Sign). When the other vessel returns your call, immediately request another channel by saying "*go to*", the number of the other channel, and "over." Then switch to the new channel. When the new channel is not busy, call the other vessel.

After a transmission, say *"over"*, and release the microphone's push-totalk (PTT) switch. When all communication with the other vessel is completed, end the last transmission by stating your Call Sign and the word *"out"*. Note that it is not necessary to state your Call Sign with each transmission, only at the beginning and end of the contact.

Remember to return to Channel 16 when not using another channel. Some radios automatically monitor Channel 16 even when set to other channels or when scanning; see your Owner's Manual.

## 9.3 MAKING TELEPHONE CALLS

To make a radiotelephone call, use a channel designated for this purpose, The fastest way to learn which channels are used for radiotelephone traffic is to ask at a local marina. Channels available for such traffic are designated **Public Correspondence** channels on the channel charts in this manual. Some examples for USA use are Channels 24, 25, 26, 27, 28, 84, 85, 86, and 87. Call the marine operator and identify yourself by your vessel's name, The marine operator will then ask you how you will pay for the call (telephone credit card, collect, etc.) and then link your radio transmission to the telephone lines.

The marine telephone company managing the VHF channel you are using may charge a link-up fee in addition to the cost of the call.

## 9.4 OPERATING ON CHANNELS 13 AND 67

Channel 13 is used at docks and bridges and by vessels maneuvering in port. Messages on this channel must concern navigation only, such as meeting and passing in restricted waters.

Channel 67 is used for navigational traffic between vessels.

By regulation, power is normally limited to 1 Watt on these channels. Your radio is programmed to automatically reduce power to this limit on these channels. However, in certain situations it may be necessary to temporarily use a higher power. See page 7 (H/L key) for means to temporarily override the low-power limit on these two channels.

## 9.5 PROHIBITED COMMUNICATIONS

The FCC prohibits the following communications:

- False distress or emergency messages:
- Messages to "any boat" except in emergencies and radio tests;
- Messages to or from a vessel on land;
- Transmission while on land;
- Obscene, indecent, or profane language (potential fine of \$10,000).

### 9.6 NOAA WEATHER ALERT TESTING

In the event of a major storm or other appreciable weather condition requiring vessels at sea or other bodies of water to be notified, the NOAA (National Oceanographic and Atmospheric Administration) broadcasts a 1050 Hz tone that some marine VHF radios can detect. (Refer to Section 5.7 "NOAA WEATER ALERT" on how to use this feature.) This tone, when detected, will produce a loud beep from the radio speaker to signal that a weather alert is being broadcast.

In order to test this system, the NOAA broadcasts the 1050 Hz tone every Wednesday, sometime between 11 AM and 1 PM. Any marine VHF radio that can detect the weather alert tone, may use this test to verify that this feature is functioning properly,

## 9.7 DIGITAL SELECTIVE CALLING (DSC)

Digital Selective Calling is a semi-automated method of establishing a radio call, it has been designated by the International Maritime Organization (IMO) as an international standard for establishing VHF, MF and HF radio calls. It has also been designated part of the Global Maritime Distress and Safety System (GMDSS) and it is planned that DSC will eventually replace aural watches on distress frequencies and will be used to announce routine and urgent maritime safety information broadcasts.

This new service will allow mariners to instantly send a distress call with GPS position (when connected to the transceiver) to the US Coast Guard and other vessels within range of the transmission. DSC will also allow mariners to initiate or receive distress, urgency, safety and routine calls to or from another vessel equipped with a DSC transceiver.

### 9.7.1 USCG DSC Watch

The USCG has plans to upgrade its VHF National Distress System (expected by 2005), so at the time of printing only larger vessels that are required to carry VHF DSC radios will be able to hear your distress transmission

## 9.8 MARITIME MOBILE SERVICE IDENTITY (MMSI)

#### 9.8.1 What is a MMSI?

A MMSI is a nine digit number used on Marine Transceivers capable of using Digital Selective Calling (DSC). This number is used like a telephone number to selectively call other vessels.

### 9.9 USING DIGITAL SELECTIVE CALLING FEATURES

#### 9.9.1 Distress Call

Transmits a DSC Distress message to all radios equipped to receive a DSC Distress call. Some Standard Horizon radios may be connected to a GPS to also transmit the Latitude, Longitude of the vessel.

### 9.9.2 Individual Call

This feature allows the user to contact another vessel capable of using DSC and automatically switch the radio to a desired working channel. This feature is similar to calling a desired vessel on CH16 and requesting them to go to another channel.

### 9.9.3 Group Call

This feature allows the user to contact a group or vessels capable of using DSC to automatically switch the radios to a desired working channel for voice communication.

### 9.9.4 Urgency Call

This call should be used when a vessel may not be truly in distress, but have a potential problem that might lead to a distress situation.

### 9.9.5 Safety Call

Used to transmit boating safety information to other vessels. This message usually contains information about an overdue boat, a derelict afloat, loss of a navigation aid or an important meteorological message.

### 9.9.6 Position request

Used to poll another vessel position via DSC and show it on the LCD of the radio.

### 9.9.7 Telephone Call

Used to automatically place a telephone call through a shore based telephone company. (In the U.S. market contact maritel at 1866 - marinet for subscription details)

## 9.10 ADDITIONAL DIGITAL SELECTIVE CALLING INFORMATION

For additional information the USCG has an excellent site that should be visited at www.navcen.uscg.mil/marcoms/gmdss/dsc.html

## 9.11 ABOUT VHF RADIO

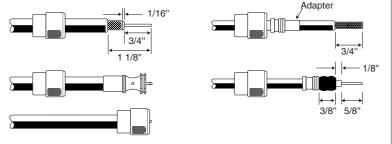

The radio frequencies used in the VHF marine band lie between 156 and 158 MHz with some shore stations available between 161 and 163 MHz. The marine VHF band provides communications over distances that are essentially "line of sight" (VHF signals do not travel well through objects such as buildings, hills or trees). Actual transmission range depends much more on antenna type, gain and height than on the power output of the transmitter. On a fixed mount 25W radio transmission expected distances can be greater than 15 miles, for a portable 5W radio transmission the expected distance can be greater than 5 miles in "line of sight".

## 9.12 SELECTING AN ANTENNA

Marine antennas are made to radiate signals equally in all horizontal directions, but not straight up. The objective of a marine antenna is to enhance the signal toward the horizon. The degree to which this is accomplished is called the antenna's gain. It is measured in decibels (dB) and is one of the major factors in choosing an antenna. In terms of effective radiated power (ERP), antennas are rated on the basis of how much gain they have over a theoretical antenna with zero gain. A 3 foot, 3dB gain antenna represents twice as much gain over the imaginary antenna. The length of the antenna you choose, however, must also be related to the size of your boat. Typically a 3 foot 3dB gain stainless steel whip is used on a sailboat mast. The longer 8 foot 6dB fiberglass whip is primarily used on power boats that require the additional gain.

### 9.13 COAXIAL CABLE

VHF antennas are connected to the transceiver by means of a coaxial cable – a shielded transmission line. Coaxial cable is specified by it's diameter and construction. For runs less than 20 feet, RG-58/U, about 1/4 inch in diameter is a good choice. For runs over 20 feet but less than 50 feet, the larger RG-8 or RG-213/U should be used for cable runs over 50 feet RG-8 should be used. For installation of the connector onto the coaxial cable refer to the figure below.

To get your coax cable through a fitting and into your boat's interior, you may have to cut off the end plug and reattach it later. You can do this if you follow the directions that come with the connector. Be sure to make good soldered connections.

# MAINTENANCE

The inherent quality of the solid-state components used in this transceiver will provide many years of continuous use. Taking the following precautions will prevent damage to the transceiver.

- \* Keep the microphone connected or the jack covered at all times to prevent corrosion of electrical contacts;
- \* Never key the microphone unless an antenna or suitable dummy load is connected to the transceiver.
- \* Ensure that the supply voltage to the transceiver does not exceed 16 VDC or fall below 11 VDC.
- \* Use only STANDARD HORIZON-approved accessories and replacement parts.

In the unlikely event of serious problems, please contact your Dealer or our repair facility. Address and phone numbers for this facility, as well as warranty information, are contained in your Owner's Manual Supplement.

## **10.1 REPLACEMENT PARTS**

Occasionally an owner needs a replacement mounting bracket or knob. These can be ordered from our Parts Department by writing or calling:

Marine Division of Vertex Standard US Headquarters 17210 Edwards Rd., Cerritos, CA 90703

Commonly requested parts, and their part numbers are listed below.

Microphone, White (CMP351W) Microphone, Black (CMP351B)	
RAM Microphone Connector Cover	
Mounting Bracket, White	
Mounting Bracket, Black	
Mounting Bracket Knob, White	
Mounting Bracket Knob, Black	
Volume Control Knob	
Squelch Control Knob	443X154500
Accessory Cable	ZD00600110
Power Cord	
Mic Hanger, White	277X155020
Mic Hanger, Black	277X155120
Dust Cover	DC-17
Distress Cover with spring	02AX053040

## **10.2 FACTORY SERVICE**

In the unlikely event that the radio fails to perform or needs servicing, please contact the following:

Standard Horizon Factory Service 115 North Wright Brothers Drive Salt Lake City, UT 84116-2838 Telephone (800) 366-4566 Fax No. (801) 359-4122

An "RA" Return Authorization number is not necessary to send a product in for service. Include a brief not describing the problem along with your name, return address, phone number, and proof of purchase.

## **10.3 TROUBLESHOOTING CHART**

TROUBLESHOOTING CHART						
SYMPTOM	PROBABLE CAUSE	REMEDY				
Transceiver fails to powerup.	No DC voltage to the transceiver, or blown fuse.	Press and hold the Power switch/ Volume control knob until the transceiver turns on. Check the power cable for DC voltage, or replace the fuse (6A 250V).				
Transceiver blows fuse when connected to power supply.	Reversed power wires.	Make sure the red wire is connected to the positive battery post and the black wire is connected to the negative. If the fuse still blows, contact your Dealer.				
Popping or whining noise from the speaker while engine runs.	Engine noise.	Reroute the DC power cables away from the engine. Add noise suppressor on power cable. Change to resistive spark plug wires and/or add an alternator whine filter.				
Sound is not emitted from the external speaker.	External cable	Check the polarity of the connected external cable.				
Receiving stations report low transmit power, even with transceiver set to HI power.	Antenna.	Have the antenna checked or test the transceiver with another antenna. If the problem persists, contact your Dealer for servicing.				
"HI BATTERY" or "LOW BATTERY" is displayed when the power is turned on.	The power supply voltage is too high or too low.	Confirm that the connected power supply voltage is not 24 volts or lower than 9 volts. Confirm that the generator has not malfunctioned.				
Your position is not displayed.	External cable.	Check the polarity of the connected external cable. Some GPS use the battery ground line for NMEA connection.				
DATA A	Setting of the GPS navigation receiver.	Check the output signal format of the GPS navigation receiver. This radio requires NMEA0183 format with GLL sentence as an output signal. If the GPS has a baud rate setting make sure to select 4800 and parity to NONE				

## **10.4 CONNECTION OF GPS WITH NMEA OUTPUT**

Manufacturer / Model	Wires	INTREPID+

Sitex Neptune, Nautilus	Gray	Blue
	Brown	Green

#### Additional Information:

- The GPS must have the NMEA Output turned on and set to 4800 Baud in the setup menu. If there is a selection for parity select none.
- For further information on interfacing /setting up your GPS. Please contact the manufacturer of the GPS receiver.

If you have further inquires, please feel free to contact us at: Phone: (800) 767-2450 Fax: (562) 926-24597 Web site: standardhorizon.com Email: marinetech@vxstdusa.com

## 11.

# CHANNEL ASSIGNMENTS

Tables on the following columns list the VHF Marine Channel assignments for U.S.A. and International use. Below are listed some data about the charts.

1. VTS. Where indicated, these channels are part of the U.S. Coast Guard's Vessel Traffic System.

2. Alpha channel numbers, that is, channel numbers followed by the letter A (such as Channel 07A) are *simplex* channels on the U.S.A. or Canadian channel assignments whose counterparts in the International assignments are *duplex* channels. International channels do not use "alpha" numbers. If you call the Coast Guard on Channel 16, they will sometimes ask you to "*go to channel 22 Alpha.*" This is a channel assigned to U.S.A, and Canadian Coast Guards for handling distress and other calls. If your radio is set for *International* operation you will go to Channel 22 instead of 22A, and will not be able to communicate with the Coast Guard. To use Channel 22A, your radio must be set for *USA* or *Canada* operation, usually by a U/I/C (USA/International/Canada) control or combination of controls. Channel 22 (without an "A") is an *International* duplex channel for port operations. Some radios indicate an "A" adjacent to the alpha channels on the display; on others "alpha" is not indicated but the proper channel is selected based on the U/I/C setting.

3. Bridge-to-Bridge channels (for example, Channel 13) are for use by bridge operators on intercoastal waterways and rivers. It is also used by marine vessels in the vicinity of these bridges for navigation and for communicating with the bridge operators. *Note that a limit of 1 Watt is specified for these channels.* See page 44 for additional information.

4. The *S/D* column on the chart indicates either S (simplex) or D (duplex). *Simplex* means transmitting and receiving on the same frequency. Only one party at a time can talk, unlike a telephone. Be sure to say *"over"* and release your microphone push-to-talk switch at the end of each transmission. *Duplex* operation involves the use of one frequency for transmitting and a separate frequency for receiving. On channels specified as duplex on the charts, correct mode of operation is established automatically by your radio when you select a channel; you cannot change the mode. And you still must release the push-to-talk switch after each transmission in order to listen to the radio.

5. Channels normally used by recreational boaters are those that include the term "non-commercial" in the *Channel Use* column of the chart. Some of these are shared with other users and some are used only in certain geographic regions.

6. Marine vessels equipped with VHF radios are required to monitor Channel 16.

Marine Products Limited Warranty

STANDARD HORIZON (a division of VERTEX STANDARD) warrants, to the original purchaser only, each new Marine Communications Product ("Product") manufactured and/or supplied by STANDARD HORIZON against defects in materials and workmanship under normal use and service for a period of time from the date of purchase as follows:

### **Fixed Mount and Portable Transceivers**

1 year - if purchased before 01/01/91 3 years - if purchased between 01/01/91 and 01/01/94 3 years Waterproof - if purchased after 01/01/94

### Loud hailers

1 year - if purchased before 01/01/91 3 years - if purchased after 01/01/91

### **Associated Chargers**

1 year - if purchased before 01/01/91 3 years - if purchased after 01/01/91

Associated Batteries - 18 months. Note: Batteries will be deemed deflective only if storage capacity drops below 80% of rated capacity or if leakage develops. Associated Accessories- 1 year. Includes: Microphones/Handsets, External Speakers, Antennas, Carrying Accessories, Power Supplies, and Signaling Boards.

To receive warranty service, the purchaser must deliver the Product, transportation and insurance prepaid, to STANDARD HORIZON (a division of VERTEX STANDARD)., 115 North Wright Brothers Dr, Salt Lake City, Utah 84116-2838. Include proof of purchase indicating model. serial number, and date of purchase. STANDARD HORIZON will return the Product to the purchaser freight prepaid. Products purchased prior to January 1, 1991 will bear the STANDARD HORIZON warranty terms in effect prior to that date.

In the event of a defect, malfunction or failure of the Product during the warranty period, STANDARD HORIZON's liability for any breach of contract or any breach of express or implied warranties in connection with the sale of Products shall be limited solely to repair or replacement, at its option, of the Product or part(s) therein which, upon examination by STANDARD HORIZON, appear to be defective or not up to factory specifications. STANDARD HORIZON may, at its option, repair or replace parts or subassemblies with new or reconditioned parts and subassemblies. Parts thus repaired or replaced are warranted for the balance of the original applicable warranty.

STANDARD HORIZON will not warrant installation, maintenance or service of the Products. In all instances, STANDARD HORIZON's liability for damages shall not exceed the purchase price of the defective Product. This warranty only extends to Products sold within the 50 States of the United States of America and the District of Columbia.

STANDARD HORIZON will pay all labor to repair the product and replacement parts charges incurred in providing the warranty service except where purchaser abuse or other qualifying exceptions exist. The purchaser must pay any transportation expenses incurred in returning the Product to STANDARD HORIZON for service.

This limited warranty does not extend to any Product which has been subjected to misuse, neglect, accident, incorrect wiring by anyone other than STANDARD HORIZON, improper installation, or subjected to use in violation of instructions furnished by STANDARD HORIZON, nor does this warranty extend to Products on which the serial number has been removed, defaced, or changed. STANDARD HORIZON cannot be responsible in any way for ancillary equipment not furnished by STANDARD HORIZON which is attached to or used in connection with STANDARD HORIZON's Products, or for the operation of the Product with any ancillary equipment, and all such equipment is expressly excluded from this warranty. STANDARD HORIZON disclaims liability for range, coverage, or operation of the Product and ancillary equipment as a whole under this warranty. STANDARD HORIZON reserves the right to make changes or improvements in Products, during subsequent production, without incurring the obligation to install such changes or improvements on previously manufactured Products.

The implied warranties which the law imposes on the sale of this Product are expressly LIMITED, in duration, to the time period specified above. STANDARD HORIZON shall not be liable under any circumstances for consequential damages resulting from the use and operation of this Product, or from the breach of this LIMITED WARRANTY, any implied warranties, or any contract with STANDARD HORIZON. IN CONNECTION WITH THE SALE OF ITS PRODUCTS, STANDARD HORIZON MAKES NO WARRANTIES, EXPRESS OR IMPLIED AS TO THE MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR OTHERWISE, EXCEPT AS EXPRESSLY SET FORTH HEREIN.

Some states do not allow the exclusion or limitation of incidental or consequential damages, or limitation on how long an implied warranty lasts, so the above limitations or exclusions may not apply. This warranty gives specific legal rights, and there may be other rights which may vary from state to state.

ONLY PRODUCTS SOLD ON OR AFTER JANUARY 1, 1991 ARE COVERED UNDER THE TERMS OF THIS LIMITED WARRANTY.

### **ON-LINE WARRANTY REGISTRATION**

THANK YOU for buying STANDARD HORIZON (a division of Vertex Standard) products! We are confident your new radio will serve your needs for many years!

Please visit www.standardhorizon.com to register the INTREPID+ Marine VHF. It should be noted that visiting the Web site from time to time may be beneficial to you, as new products are released they will appear on the STANDARD HORIZON Web site. Also a statement regarding product support should be added to the manual.

#### **Product Support Inquiries**

If you have any questions or comments regarding the use of the INTREPID+, you can visit the STANDARD HORIZON Web site to send an E-Mail or contact the Product Support team at 562/404-2700 M-F 7:00-5:00PST.

In addition to the warranty, STANDARD HORIZON includes a lifetime "flat rate" program to provide service after the warranty period has expired. If you wish to obtain the flat rate price for out-of-warranty repair, you must include the information on the Owner's Record with the unit when you return it to your Dealer or to STANDARD HORIZON.

Lifetime Flat Rate Service Program: For the original Owner only, for the lifetime of the unit, STANDARD HORIZON will repair the unit to original specifications.

Note: The flat rate amount is payable by the Owner only if STANDARD HORIZON or the STANDARD HORIZON Dealer determines that a repair is needed. After the repair, a 90-day warranty will be in effect from the date of return of the unit to the Owner.

This service program is not available for equipment which has failed as a result of neglect, accident, breakage, misuse, improper installation or modification, or water damage. (depending on the product)
